THE sale of several extensive Editions of this Chronology inducing the Editor to believe that a new one, brought down to the present time, would be acceptable to the public, he has been at some pains, by a revision and copious enlargement of the contents, to render it more correct, and better adapted for the purpose of reference. To effect these objects, he has availed himself of the assistance of a literary friend, and hopes that the result of their labours will be found a useful and comprehensive guide, when information is required connected with Chronology.

Being at the same time fully aware that in a work compiled like the present, from various sources, errors must frequently occur, the Editor, whilst for such errors he solicits the indulgence of the public, will feel highly indebted for any corrections or suggestions that may be forwarded to him, of which he will gladly avail himself in future editions.

BALLINAHINCH, battle of, Ireland, between the Irish and British troops, under Earl Moira, June 13, 1798: the royal army suffered severely.

BALLOT, the secret, allowed by Louis Napoleon of France to be adopted on his election as head of the state, Dec. 1, 1851.

BALLOONS, said to be first invented by a Jesuit, 1729, but effectively by the brothers Montgolfier, Aug. 27, 1783. Pilatre de Rozier and M. Romain perished in attempting to pass from Boulogne to England, their balloon taking fire, June 14, 1785. Introduced into England by Lunardi, who ascended from Moorfields, Sep. 15, 1784. Messrs. Blanchard and Jeffries crossed from Dover to Calais, Jan. 7, 1785; used to reconnoitre at the battle of Fleurus, June 17, 1794. M. Garnarin rose to 4000 feet, and descended by a parachute, Sep. 21, 1802, near St. Pancras church. M. Gay Lussac ascended to 23,000 feet, Sep. 6, 1804. A Mr. Arnold ascended from St. George's Fields, and fell into the Thames: Major Money, into the sea, having ascended from Norwich, and was saved by a revenue cutter. Sadler, after many ascents, fell into the sea, near Holyhead, and was saved by a vessel, Oct. 9, 1812. Mad. Blanchard, in Paris, fell in consequence of the balloon taking fire, and was killed, July 6, 1819. Mr. Sadler, jun., was killed by a fall from a balloon, in 1825; a Mr. Cocking was killed by the collapsing of his parachute, July 24, 1837. The ascents have been numerous, and the accidents few. The most remarkable, perhaps, was that of the great Nassau balloon, which, in 18 hours, took three passengers to Wielburg, in the duchy of Nassau, from Vauxhall Gardens, Nov. 7, 1836. Lieut.

Gale, an Englishman, was killed by the people letting go the ropes of the balloon prematurely, at Bordeaux: he was dashed to pieces, Sep. 18, 1850.

BANK of England projected by one Patterson; incorporated for twelve years, 1694, in consideration of £1,200,000 lent to the state at 8 per cent., and £4000 for management, that being its capital; notes were under par down to 1745, having been at 20 per cent. discount at first; bank bills paid in silver, July 2, 1751-1752; government borrowed £1,400,000, at 3 per cent., 1745; bank post bills first issued, 1759; notes of £10 and £15 issued, Mar. 31; cash payments discontinued, Feb. 25, 1797, and notes of £1 and £2 issued; 5s. silver tokens issued, Jan., 1798, and value raised to 5s. 6d., 1811; these were Spanish dollars, with the head of George III. stamped on the neck of Charles IV. of Spain; cash payments partially resumed, Sep. 22, 1817; the restrictions ceased, 1821; on May 1, 1823, the current gold coin of the realm was demanded and paid; May 22, 1832 a committee of secrecy was formed to inquire into the propriety of renewing the bank charter; an

act passed for the renewal of the charter, Aug. 29, 1833; bank notes made a legal tender for sums above £5 after Aug. 1, 1834, and accounts of the state of the Million and securities were ordered to be published at stated periods. In 1694, the bank proprietors divided 8 per cent.; increased to 9 the subsequent year; from 1729, between $5\frac{1}{2}$ and 9, for eighteen years; in 1747, interest fell to 5 per cent.; in 1753, to $4\frac{1}{2}$; from 1767 to 1806, it increased to 7 per cent.; from 1807 to 1822, to 10 per cent.; in 1823, and subsequent years, to 8 per cent. Besides this interest, $57\frac{1}{2}$ per cent. has been received upon the subscribed capital to 1852. The bank charter was extended five years, 1706, beyond the original period, in consideration of circulating exchequer bills to the government, to the extent of £1,500,000. The charter was renewed thirteen times, viz.—1709 to 1732, 1713 to 1742, 1742 to 1764, 1764 to 1786, 1781 to 1812, 1800 to 1833, 1833 to 1854. The total debt due to the bank from the government is £14,686,800, bearing 3 per cent. interest. The 5 per cents. reduced to 4, March, 1822. The capital stock of the company is £11,642,400, on which the annual dividend is paid to the proprietors. The augmentation of the capital of the bank has been permitted from time to time, as parliament has seen fit, upon the renewal of the charter. The firm is styled, the Governor and Company of the Bank of England. The average amount of the public money in the hands of the bank, is about $5\frac{1}{2}$ or 6 millions. The profit of the bank (at 3 per cent., the rate at which the government pays for the capital borrowed of it, nearly £15,000,000 in amount), remunerates the bank in its capacity of banker to the public service. From the report of the secret committee of 1797, to investigate the affairs of the bank, it appeared that, on the 25th of Feb., there was a balance of £3,826,903, and on the 11th of Nov.,

a balance of £3,839,550 in favour of the company. These profits increased afterwards; and, at Lady-day, 1807, they raised their dividend, as already seen, and their profits increased yet more. The buildings of the establishment, erected in 1732, were enlarged, 1771, improved, 1796, and partly rebuilt, 1824.

BANK, (the term,) comes from banco or bench, on which monies were exchanged, in the market-places. Among many arrangements, before banking took place in England, the merchants deposited their cash at the mint, in the Tower of London, for security. In the year 1640, Charles I. carried off the money, and destroyed the security of the mint. Not wishing to be longer open to the royal plunderer, they

placed their money, in 1645, with the Goldsmiths' Company, in Lombard Street, who were obliged to keep places of security for their own valuable goods. At home, those merchants and dealers were liable to be robbed by their apprentices, who found impunity and security with the army. The goldsmiths paid 4d. per cent. per day for the monies thus lodged, and lent it out at higher interest. Thus they became the first London bankers.

BANKS, institution of, these were begun in Italy, by the Lombard Jews, in 808, some of whom came to England, and settled in Lombard Street, where so many banks yet remain. The country banks in England, in 1815, were 696, with 2164 partners; in the following year, 642, with 1979 partners.

Napoleon put an end to the temporal reign of the pope, May 17, 1809; Pius refused to resign, and was taken to Fontainebleau, until 1814, when the Allies restored him to the plenitude of temporal power: he was of the same poor intellectual character as his successors. While a prisoner at large at Fontainebleau, he exhibited great avarice: although all his wants were amply provided for, yet he reckoned very carefully a few

dozen pieces of gold which he kept in his escrutoire; he took an exact account of the most trifling articles of his wardrobe, from his cymar to his stockings and small linen: he did not open a book the whole day; he employed himself in occupations which could scarcely be imagined or believed without the evidence of the senses—he would stitch and repair little rents in his dress, he even replaced with his own hands a button on his breeches; he washed the front of his cymar, upon which he was accustomed to drop snuff, which he used in great quantities: no small dose of illusion is necessary to create a belief in the infallibility of a sovereign pontiff so nearly approaching to the extreme of human imbecility: he had many means of rationally employing his time at Fontainebleau, had he been so disposed; there was a magnificent library which he never touched, and he would scarcely see any body but his cardinals.

The Seven Years' War, or third war with Prussia, from 1756 to 1763, termi-

nated by the peace of Hubertsburg, in Saxony, Feb. 15, 1763. 15. Fourth war with Prussia, respecting the Bavarian succession, from 1778 to 1779, terminated by the peace of Teschen, in Upper Silesia, May 13, 1779. 16. Different wars with the States-General of Holland, from 1784 to 1785, respecting the opening of the Scheldt, terminated by the treaty of Fontainebleau, on November 8, 1785. 17. Sixth war with the Ottoman Porte, from 1790 until the armistice of 1790, stipulated by the Congress at Reichenbach, in Silesia, and terminated by peace made at Szistowa, Aug. 4, 1791. 18. War with France from 1792 to 1797, terminated by peace at Leoben, in Upper Styria, April 17, 1797. 19. War with France, March, 1799, terminated by the peace of Luneville, Feb. 9, 1801. 20. War with France, 1805; terminated the same year. 21. War with France, 1809; terminated the same year. 22. War with France, 1813; terminated May 30, 1814. The wars between England and France, with the terms of their duration, since that which commenced in 1116, and lasted twenty-five years, were—1141, one year; 1201, fifteen; 1224, nineteen; 1294, five; 1339, twenty-one; 1368, fifty-two; 1422, forty-nine; 1492, one month; 1512, two years; 1521, six; 1549, one; 1557, two; 1562, two; 1627, two; 1666, one; 1689, ten; 1702, eleven; 1744, four; 1756, seven; 1778, five; 1793, which terminated Mar. 27, 1802; 1803, which terminated May, 1814–15; terminated the same year. In the wars to restore the old monarchy of France, which raised up Bonaparte, and after his disasters of Moscow and Waterloo, succeeded in placing the exiled family on the throne of France, by foreign arms, only to be hurled from it again, England expended, before the peace of Amiens, to put down the revolution, 464 millions; after the peace of Amiens was broken, against Napoleon, 1159 millions. The total sums expended

by interfering in continental wars, sometimes to suit the predilection of the crown for interfering in German quarrels, at other times to support a pretended balance of power, from the revolution of 1688 to 1815, was 2023 millions of pounds sterling. The waste of human life was equally great. The battles of Wellington in the Peninsula, cost England 50,000 men, and the French four or five times as many at least. The entire of the sacrifice from 1790 to 1815, on all sides, must have been many millions of men. Previous to the close of 1815, for 127 years, England wasted her resources and overwhelmed her inhabitants with debt, to support 65 years of war to 62 of peace. We spent in the war of 1688, £36,000,000; in that of the Spanish succession, £62,000,000; in the Spanish war, £54,000,000; in the seven years' war, £112,000,000; in the American war, to lose our fine colonies, £136,000,000, in addition to £1,623,000,000 in the two last French wars. In 1691, our debt was £1,000,000. *See also Wars.*

BEER, early introduced into England, being similar in type to ale. Porter was first made about 1730, to unite the flavour of ale, beer, and twopenny, which were used before that; and it was called porter because it was drunk by porters principally. The licensing system came in about 1736. Beer was known in Scotland and England as early as 1100; a rich brewer is mentioned in 1414 by Stowe, and his gold trappings, 1482 and 1492. A quart of the best beer or ale was sold by statute in the reign of James I. for 1d., and two quarts of small beer for the same money. Before 1552, any body might sell ale or beer. There is no mode of knowing the amount of gallons or barrels of beer brewed in England. There were 60,000 retailers of beer in England in 1834, when the acts 1 Will. IV. and 4 Will. IV. were passed. There are about 1600 public brewers in England, 136 in Scotland, and 263 in Ireland: 28,000 victuallers brew their own ale. The quantity of malt brewed by the following seventeen porter and ale houses, in the financial years specified, ending Oct., 1852, was as follows:—

There are one hundred and thirty-six wholesale brewers in London. The duties being now only upon the malt, there is no excise account of the quantity of malt liquor brewed. In England, 1829, there were brewed 5,949,290 barrels of strong, and 1,330,467 of table-beer. In Scotland, 110,952 of strong, and 39,387 of table-beer. The quantity brewed in London varies. In 1823, it was 1,829,940 barrels, of which 71,828 were exported. The malt liquor brewed in private houses is unknown in respect to quantity, and can only be loosely estimated by the total malt consumed, which the revenue returns furnish. London engrosses nearly one-third of the whole brewing business of England. In the year 1760, the largest brewer returned 74,734 barrels; and in 1815, the largest house returned 337,621 barrels; in 1840, 361,321 barrels. The excise on malt took place in 1667, 1697. The tax was increased 1760, and new modelled 1766. Malt spirits also pay a duty. Important acts for regulating these articles are numerous. The latter were passed 8 Geo. IV., 1827, and 11 Geo. IV., 1830. Act regulating malsters, 1 Vic., July, 12, 1837. Porter was raised 2d. per gallon, Jan. 10, 1762, and again, 1801. The different quantities of porter brewed will show the increase and decrease at the times stated, in the returns of twelve principal brewers in London, between July 5, 1807, and July 5, 1808.

A porter cask, belonging to Whitbread & Co., 65 feet in diameter, 25 feet high, with 56 hoops, weighing from one to three tons each, contains 20,000 barrels; and cost four years making. At the brewery of Meux & Co. two large vats suddenly burst, Oct. 17, 1814, and between 8000 and 9000 barrels were lost. The brewing business is engrossed by a few firms of gigantic capital, that expend large sums in purchasing public-houses, and exercise the despotic influence of great capital too often to the disadvantage of the community at large. The hops used by the brewers of London are of home growth. Parliament was at first petitioned against their growth as a deleterious weed, 1428. First used in malt liquors, 1525—as a bitter narcotic. The average quantity grown for twenty-two years, from 1785 to 1803, was 22,538,000 lbs. weight. Duty of those of Kent and Sussex in 1792, was £170,000; in 1793, £162,112, 9s. 5d.; in 1795, £82,323, 19s. 4d.; in 1799, £77,279, 5s. 4d. In 1831, the number of acres planted was 47,129. The produce in pounds weight that year, 36,496,681. In 1852, the total old duty was £244,824, 2s. 5d.

BENEFACCTIONS to the poor, and to the various public hospitals in France, given or bequeathed and received by legacy, amounted, between 1814 and 1823, to 27,503,256 francs.

BENEFICES, those sinecures of the church began about the year 500, as church corruptions increased, in order to contribute to the luxury of ecclesiastics. They did not come into full use until the twelfth century, prior to which, the clergy were maintained by the contributions and oblations of the faithful. Then abuses soon crept in; Pope Clement VII. gave to his nephew, in 1534, all the benefices that became vacant in six months. The number in England is, according to the return of 1852, 11,728; and the number of glebe houses, 8214; residents, 8077, non-residents, 2952; this is exclusive of bishoprics, deaneries, canonries, prebendaries, priest vicars, lay vicars, secondaries, and similar preferments. The number of parishes is 11,077, and the churches and chapels between 12,000 and 13,000. The parishes in Ireland number 1456, but more than 900 glebe houses are attached. The net annual value of non-resident incumbents out of 2960, was only returned by 1297, from £10 to £2180 per annum.

BILLS of Mortality first compiled, 1533, and were formally recognized after the great plague of 1593. In 1604, the burials in 97 parishes, 16 out-parishes, and in the outer parishes were 4,323; also 896 of plague; 5458 christened. In 1619, 7,999 were buried, and 8127 christened. In 1627, 7,711 were buried, and 8,408 christened. In 1633, 10,651 buried, and 10,034 christened. In 1643, 12,216 buried, and 9,410 christened. In 1651, 10,804 were buried, and 6,071 christened. In 1659, 14,720 were buried, and only 5,690 christened; the plague that year being very fatal. In 1664, 15,448 were buried, and 11,722 christened. Great years of mortality in London were 1592, 1603, 1625, 1636. In 1603 and 1625, eight times more died in London than were born, and a fifth

part of all. The plague of 1603 lasted eight years, and that of 1636 no less than twelve years. In 1665 the funerals in the parishes within the walls, were 15,207, of which number 9,837 died of the plague. Of the sixteen parishes without the walls 41,351 died, and of the plague 28,888. In the twelve parishes in the out parts, 28,554 died; of the plague, 21,420. In the five parishes of the city and liberties of Westminster, 12,194 died; of the plague, 8,403. The funerals in 1665 were 97,306, and out of this number, 63,596 died of plague, the last time it ever visited the metropolis. The late act of parliament for the registration of deaths, births, and marriages, at last fixed the returns nearer a certainty, prior to which they were very carelessly recorded. In 1780 they were given as 16,634 births, and 20,507 burials; in 1800, 19,176 births, to 23,068 burials; in 1820, 26,158 births, to 19,348 burials; in 1840, at 30,387 births, to 26,774 burials; and in 1850, at 39,973 births, to 36,947 burials. Including the suburbs of London within the registrar general's district, the number of births for the year ending Jan., 1850, was 72,662; and of deaths, 61,423. The population is about two millions and a quarter.

• The deaths per cent. are: males, 2.7; females, 2.24 per cent. The most fatal diseases are those of the respiratory organs. Of 100,000 born in London, 31,671 die under five years old; from five to ten, 3,408; ten to fifteen, 1,381; fifteen to twenty, 1,856; twenty to thirty, 5,016; thirty to forty, 6,816; forty to fifty, 8,543; fifty to sixty, 11,470; sixty to seventy, 13,495; seventy to eighty, 11,842; eighty to ninety, 4,142; above ninety, 360; so that nearly one in ten lives to eighty. The mortality of some towns is much greater in proportion than that of the metropolis: of these, Liverpool shows the highest rate of mortality. The country is healthier than the towns; and in

the Southern counties, a greater number live to the commonly allotted age of man than in the northern, in the hilly than in the flat countries. The pursuits of life too have a considerable effect in the increase or decrease of mortality in particular districts.

BISHOPS, first translation, instituted, 239; originally appointed by the people, 400; first in England, 694; in Denmark, 939; made barons here in 1072; precedence settled, 1075; banished England, 1208; consented to be tributary to Rome, 1245; empowered to imprison heretics, 1382. The first executed by a sentence of the civil power, 1405; six new ones instituted, 1530; elected by the royal *conseil d'élire*, 1535, held their sees during pleasure, 1547; seven deprived from being married, 1554; several executed by Mary, 1555—8; excluded from voting upon temporal questions in the house of peers, 1640; fifteen consecrated at Lambeth, 1559; their lands taken into the hands of the crown, and impropriate tithes substituted for them, June 24, 1559; refused to take the oath of supremacy to Queen Elizabeth, and imprisoned, 1559; expelled Scotland, 1639; deprived of the right of voting in parliament and of temporal jurisdiction, Feb. 14, 1641; the whole order abolished, Oct. 9, 1646, after ten had protested against the proceedings of parliament, and had been sent to the Tower, 1641—2; eight new ones consecrated, and nine restored, Oct. 25, 1660; resigned their seats in the house of peers, Nov. 30, 1661; seven sent to the Tower for not reading the king's declaration for liberty of conscience, acquitted June 30, 1688; six suspended for not taking the oaths to king William, Feb., 1690; deprived, 1690; sees of Bristol and Gloucester united, and that of Ripon created, 1836; an order in council, Oct. 1838, ordered the sees of Bangor and St. Asaph to be united, and a new see to be created at Manchester; this was rescinded 1846.

BISHOPS of England and Wales, according to the antiquity of their institution.—London, an archbishopric and metropolitan of

England, founded by Lucius, the first Christian king of Britain, 185; Landaff, 185; Bangor, 516; St. David's, 519 (the archbishopric of Wales, from 500 to 1100, when the bishop submitted to the archbishop of Canterbury as his metropolitan); St. Asaph, 547; St. Augustin, or Austin, made Canterbury the metropolitan archbishopric, by order of Pope Gregory, 596; Wells, 604; Rochester, 604; Winchester, 650; Lichfield and Coventry, 656; Worcester, 679; Hereford, 680; Durham, 690; Sodor and Man (with jurisdiction of the Hebrides in Scotland), 838; Exeter, 1050; Sherborne (changed to Salisbury), 1056; York, archbishopric, 1067; Dorchester (changed to Lincoln), 1070; Chichester, 1071; Thetford, (changed to Norwich), 1088; Bath and Wells, ib.; Ely, 1109; Carlisle, 1133. The following six were founded upon the suppression of the Monasteries by Henry VIII.—Chester, Peterborough, Gloucester, Oxford, Bristol, Westminster, 1538. Westminster was united to London, 1550.

BISHOPS in Ireland lay claim to an earlier appointment than those of England, which is doubtful. The bishopric of Ossory is said to have been founded, 402; that of Trim, 432; prelaties there were constituted, 1151; several were deprived by Queen Mary, 1554; Atherton put to death ignominiously, 1640; Two bishops deprived for not taking the oath to King William, 1691; one of Clogher deprived, 1322; church temporalities act, reducing the Irish bishoprics, passed, Aug. 14, 1833; of five archbishoprics, two were abolished, and eight of the eighteen bishops were, as they fell vacant, to be united to other sees, so that the Irish church should consist, as at present, of two archbishops and ten bishops, which number, by the lapses named, became existent, 1850.

BISHOPS, Scotch, said to have been constituted in the fourth century, or in 370. Episcopacy was abolished

in Scotland, in 1688-9. There are six nominal bishops, called post revolution bishops, at present in Scotland.

BISHOPS, Colonial, first constituted in 1784, in the person of the bishop of Connecticut, consecrated by four Scotch nonjuring prelates. The bishops of New York and Pennsylvania consecrated in London, Feb. 4, 1787; of Nova Scotia, Aug., 1787; the bishop of Virginia, 1790; the first Roman catholic bishop in the United States was Dr. Carroll, of Maryland, 1789; Canada, 1793; a bishop of Calcutta was appointed, July, 1813; and of Madras, and of Bombay, 1833; there are others in most of the colonies.

BISHOPRICS, incomes of—Canterbury, £20,000; York, £14,000; Durham, £24,000; Winchester, £18,000; Ely, £12,000; London, £10,000; Bath and Wells, £5000; Chichester, £4000; Lichfield and Coventry, £6000; Worcester £4000; Hereford, £4000; Bangor, £5000; St. Asaph, £6000; Oxford, £3000; Lincoln, £5000; Salisbury, £6000; Norwich, £4000; Carlisle, £3500; St. David's, £5000; Rochester, £1500; Exeter, £3000; Peterborough, £1000; Bristol, £1000; Landaff, £900; Gloucester, £1200; Chester, £1000; these have since been equalized or modified, as the sees fell in, and new bishoprics have been erected at Ripon and Manchester. Irish Bishops, before the reduction, had revenues as follow, besides large tracts of land, by the leases of which enormous sums were realised—Armagh, £8000; Dublin, £5000; Tuam, £4000; Cashel, £4000; Derry, £7000; Clonfert, £2400; Clogher, £4000; Kilmore, £2600; Elphin, £3700; Killala, £2900; Limerick, £3500; Cork, £2700; Cloyne, £2500; Down, £2300; Dromore, £2000; Leigh and Ferns, £2200; Kildare, £2600; Raphoe, £2600; Meath, £3200; Killaloe, £2300; Ossory, £2000; Waterford, £2600.

BONAPARTE family, the great name of modern history; this name, Italianised, is written Buonaparte, but in the register of the birth of Napoleon, the names are spelled in both modes. Charles Bonaparte, or Carlo Buonaparte, was born at Ajaccio, in Corsica, 1744, of one of the best families in the city; educated in Tuscany, he returned home and married Letitia Ramolini, aged 17, being born at Ajaccio, 1750; she died Feb. 2, 1836; she had five sons and three daughters. Her husband took part with Pascal Paoli in 1768, reluctantly submitting afterwards to live under French rule, though named royal counsellor and assessor under it; chosen deputy to the French court, 1777; one of the council of twelve nobles, 1781; he went to Marseilles, 1785, about his health, and died

there, Feb. 24, 1785. Joseph, the elder, (successively King of Naples, and of Spain, in 1808,) Napoleon, Lucien, Louis, and Jerome, were the five sons; of the daughters, Pauline became Princess Borghese; Caroline, wife of Murat, king of Naples; and the other sister, Madame Bacciocchi. Napoleon, born Aug. 15, 1769, distinguished himself at the military school of artillery, in 1784; was appointed to the artillery in the regiment of La Fere, 1785; distinguished himself greatly at the siege of Toulon, by superior skill in directing the batteries; rose to be a general of brigade, 1794; commanded the troops, Oct. 5, that year, who were employed to defend the convention, and defeated the Parisians; married, March, 1796, Madame Josephine Beauharnois, whose husband had been one of Robespierre's victims; three days after his marriage, he quitted his bride for Nice, to command the army there, found it in a state of destitution, but, not discouraged, he out-manœuvred the Austrians, and in April won the battles of Montanotte, Millesimo, Dego, and Mondovi; May 10, 1796, he gained the field of Lodi, and quickly became master of Piedmont and the Milanese; fought the battle of Lonato, Aug. 3, 1796; that of Castiglione, Aug. 5; the battle of Roveredo, Sept. 4; of Bassano, Sept. 8; of San Giorgio, Sept. 13; of Arcola, Nov. 15; in 1797, Jan. 13, gained the battle of Rivoli; the 16th of La Favorite; took Mantua, Feb. 2; gained the fight of the Tagliamento, March 12; of Levis, Mar. 29; on the 23rd, Trieste surrendered to him; April 16, he signed the preliminary treaty of Leoben, with Austria; May 16, took possession of Venice; 17th, signed the treaty of Campo Formio; set sail for Egypt, May 20, 1798; fought the battle of the Pyramids, July 21; the battle of El Arich, Feb. 15, 1799; of Nazareth, April 8; of Mount Thabor, April; besieged

BOOKS, in their present form, invented by Attalus, king of Perga-

mus, 887; begun to be sold by catalogue, 1676; supposed to have been written in a portable form as early as the days of Job. The prices were anciently very high. Jerome ruined himself by buying the works of Origen. A large estate was given by King Alfred for a book on cosmography, 872. They sold at prices varying from £10 to £40, in 1400. Thirty thousand volumes burned by Leo, 761. The first printed, a vulgate edition of the Bible, 1460; the second, Cicero de Officiis, 1466; Cornelius Nepos was the first classical book printed in Russia, April 29, 1762. Books to the extent of 200,000 volumes burned at Constantinople. There were 4,194,412 volumes in the suppressed monasteries of France in 1790; 2,000,000 of these were upon theology; the MSS. were 26,000; in the city of Paris alone there were 808,120 volumes. The first English book was the game and play of chess, by Caxton, 1474. The first in Dublin was the liturgy, 1550. Books of astronomy and geometry were destroyed in England in the reign of Edward VI., 1552, being accused of a taint of magic. A Countess of Anjou, in the fifteenth century, paid for one book 200 sheep, five quarters of wheat, and the same quantity of rye and millet; and in early times, the loan of a book was considered to be an affair of such importance, that in 1299, the Bishop of Winchester, on borrowing a Bible from a convent in that city, was obliged to give a bond for its restoration, drawn up in the most solemn manner; and Louis XI., in 1471, was compelled to deposit a large quantity of plate, and to get some of his nobles to join with him in a bond, under a high penalty to restore it, before he could procure the loan of a book which he borrowed from the faculty of medicine at Paris. The earliest bound book is supposed to have been bound about 650, the book of St. Cuthbert. A latin psalter in oak boards was

bound in the ninth century. The evangelists, on which the English kings from Henry I. to Edward VI. took the coronation oath, was bound in oak boards nearly an inch thick, 1100. In the fourteenth century velvet and silk were used. Vellum was introduced in the fifteenth century, and was stamped and ornamented in 1510. Leather came in about the same time. Cloth binding superseded plain boards about 1831. India rubber backs were introduced in 1841.

Books, exclusive privilege of printing, first granted in 1490, by Henry, bishop of Bamberg; the oldest Venetian privilege dates from 1491; the oldest Papal, 1505; one was granted in 1495, by Duke Louis Sforza of Milan; a Papal one in 1506, to Tosino, a bookseller of Rome; in 1507, one to Verard, by Louis XII.; the first imperial, 1510; and in 1527, one from the Duke of Saxony, to the edition of the New Testament by Emser; in 1500, one was granted in England, by Queen Elizabeth, to one Weight, of Oxford, for a translation of Tacitus; but the oldest was in 1510, for the history of King Boccus, and another in 1518; works "cum gratia et privilegio" occur in 1520, 1521, 1525, 1528, 1530, &c. In 1483, no foreign merchants were allowed to import books and manuscripts to print them here; they were afterwards permitted to do so, but Henry VIII. revoked the liberty in 1533. In 1538, the same king issued an order respecting the printing of bibles; and in 1542, gave an exclusive privilege for the purpose, to last four years. Exclusive privileges afterwards became numerous. During the Commonwealth the privilege was abolished, but in the 27th Charles II. restored; the same in Queen Anne's reign, in that of George I. and George III. The existing patent was conferred in 1830 (Jan. 21), and terminates in 1860; the patentees have not, recently, thought proper to enforce

their rights. In Scotland, before 1700, various licenses were granted; to one Basket, July 6, 1716; Alexander Kincaid, 1749; to Blair and Bruce, 1798: the patent ceased in 1833. In Ireland, George III. granted a patent to one Grierson, for forty years; it was renewed by his son, 1811.

BRITAIN, island of Great, the earliest mention of which is in the account of the voyage of Hamilcar, or Hamilcon, preserved by Festus Avienus, to the islands of Astry-minion, or Cassiterides, in search of tin; to which the Carthaginians, being the marine carriers for the Phœnicians, used to sail for that purpose, by way of Gades or Cadiz. The description given of the locality whence the tin was obtained, is also found in the early Roman writers. Julius Cæsar first visited Britain 55 years before the Christian era. The expedition of Claudius into Britain took place in the year 40 of

the existing era; first discovered to be an island, 40; London founded by the Romans, 49; Caractacus taken and carried to Rome, 51; the Romans defeated by Boadicea, 61; Suetonius defeated a large army of the Britons, 61; the conquest completed by Agricola, 85; reign of Lucius, the first Christian king, 179; Severus occupied York with his court, 207; died there, 211; Carausius ruled Britain, 286; was killed by Alectus, who still usurped the supreme power, 293; Constantius, the emperor, recovered Britain, defeating Alectus, 296; he died at York, 306; the Romans finally withdrew from England, 426; the Anglo-Saxons called in to aid the natives in their defence against the Picts, 449; the new allies of the Britons drove them into Wales and the west, 455; many crossed over from the west and settled in Britany or Armorica, 457; South Britain divided into seven kingdoms, called the Heptarchy, which lasted till 827; Egbert then crowned king of all England, the heptarchy having become united under him, 820.—The kings or leaders who governed before and under the heptarchy are very imperfectly handed down: those since the Christian era, whose names (and names alone, in many cases,) remain, are as follow: Aviragus, 45; Marius, 73; Coilus I., 125; Lucius, 179; Severus, the Roman emperor, 207; Carausius, 284; Alectus, 293; St. Helena and Constantius, the latter emperor of Rome, 296; Constantine, the first Christian emperor of Rome, 337; Constans, brother of Constantine, 340; Magnensius, 350; Constantius, his vicars in Britain, Gratianus, Funarius, and Martinus, 353; Julian, 361; Jovian, 363; Valentinian, 364; Gratian, 375; Maximus, 381; Valentinian, 388; Honorius, 395; Vortigern, 446; Vortimer, 464; Vortigern again, 471; Aurelius Ambrosius, of Roman extraction, 481; Uther Pendragon, 500; Arthur, 506; Con-

stantine, cousin of Arthur, 546; Aurelius Conan, 576; Vortipor, Cuneglas, 576; Malgo Coranus, 586; Careticus, 613; Cadwan VI., Prince of North Wales, 615; Cadwallan, 678; Cadwallader. [Here the Saxons conquered all the country east of the Severn, and divided it, and the British rulers were only styled "Princes of Wales."] The kingdoms of the heptarchy were Kent; Sussex and Surrey, called the North Saxons; Bucks, Hants, Wilts, Somerset, Dorset, and Devon, called the West Saxons; the East Saxons, comprising Essex, Middlesex, and a part of Herts; Northumbria, comprising Lancaster, York, Cumberland, Westmoreland, Durham, and Northumberland; the East Angles, including Norfolk, Suffolk, and the Isle of Ely; Mercia, including Gloucester, Hereford, Chester, Stafford, Worcester, Oxford, Salop, Warwick, Derby, Leicester, Bucks, Northampton, Notts, Lincoln, Bedford, Rutland, Huntingdon, and part of Herts. Of these seven kingdoms, Kent began with Hengist, 455, and numbered seventeen kings to Egbert, the last being Baldred, 805, conquered by Egbert, 823. The South Saxon began with Ella, 490, and terminated with Anthun and Berthun, 688; the names of most of the princes are unknown; conquered 725 by Ina. The kingdom of the West Saxons began with Cerdicus, 519, of which Bertric was the last, 781, numbering eighteen kings before the throne fell to Egbert. The East Saxon princes numbered fourteen kings, beginning with Erchenwin, 527, until seized by Egbert. The kingdom of Northumbria, at first two governments, became united under Ida in 547; in all twenty-eight kings before Egbert, 808. The kingdom of the East Angles commenced under Uffa, 575, and terminated under Ethelbert, 790, numbering sixteen monarchs. The powerful kingdom of Mercia began with Crida, or Cridda, 586, in all

twenty-one kings, the last being Burhred or Burdred, 852, when it terminated, like the others, in the sovereignty of Egbert. These seven kingdoms had all been nominally united under one chief, who made an eighth; hence there was an octarch over all before the time of Egbert, who became absolute by vanquishing the subordinate seven, he being the octarch, or acknowledged head, at that moment. The first of the octarchs was Hengist, first king of Kent, 457; Ella, 490; Cerdic, 519; Kenrick, 534; Cealwin, 560; St. Ethelbert, 593; Redwald, 616; Edwin, 630; Oswald, 635; Oswen, 644; Wulfhac, 670; Etheldred, King of Mercia, 675; Conrad, 704; Celred, 709; Ethelbald, 716; Offa, 758; Egforth, 796; Kenulf, 796; Egbert, 820.

BRUNSWICK, house of, originated with Azo of Este, who died 1055, and left a son who was Guelph IV., great-grandfather of Henry the Lion, who married Maud, daughter of Henry II., king of England. Henry the Lion is regarded as the founder of the family. He was proscribed in the diet of Wurtzburg, 1179. The house of Brunswick became divided into several branches. The royal family of England sprung from the Duke of Brunswick-Zell. Duke Augustus left three sons, two of whom succeeded him, Rodolphus Augustus, 1666, and Anthony Ulrick, 1704; Augustus William, son of Ulrick, 1714, was succeeded in 1731 by Ludovick Rudolf, who died without male issue, 1735, and was succeeded by Ferdinand Albrecht, who, dying the same year, was succeeded by his son Charles, who transferred the ducal residence to Brunswick, and in 1780 was suc-

ceeded by his son Charles William Ferdinand, killed at Jena, Oct. 14, 1806. He was succeeded by his fourth son, his eldest son being blind, who abdicated in his favour, Charles William; this last fell at Quatre Bras, commanding the advanced guard, June 15, 1815. He was succeeded by his eldest son Charles Frederick William, who was deposed by his younger brother, William, Sept. 7, 1830, in consequence of a revolution at Brunswick, in 1830, and the elder brother sought, when the ducal palace was burned, a refuge in England.

BUFFOONS in courts, afterwards called Jesters, abolished by Trajan, the Roman emperor, 98; jesters continued by English kings, for their indecent railleries, and employed under the Tudors and Stuarts; James I. is said to have changed them into poets-laureate, but these, according to Selden, were separate dependants, and existed as early as 1251, though their annual butt of sack seemed more the salary of the jester.

BUGDEN Palace, Huntingdon, built 1480.

BUILDING, with wood and clay or wattle, the mode of the ancient Britons; Benedict, the monk, began the use of stone in dwellings about 670; brick was used here by the Romans, as well as stone, in public buildings; introduced here generally about 886; dwelling-houses were generally constructed of wood until about 1600. The first recorded building of stone in Ireland was a castle at Tuam; built by the King of Connaught, and called, on that account, "The Wonderful." The increase of buildings was prohibited

by Queen Elizabeth, who ordered that only one family should dwell in one house, 1580. The buildings in High Holborn, north and south, and Great Queen Street, were erected between 1607 and 1631, nearly on the spot where the Elms once stood. The number of dwellings in London, in 1772, was 100,930; in 1841, the houses were computed at 217,520; in the county of Middlesex alone, and in that of Surrey, at 100,000; the islands in the British Seas in that year contained 3,464,007 inhabited, 198,061 uninhabited, and 30,631 building; the houses in the metropolis were in that year, on the Middlesex side, 147,210; on the Surrey side, 58,774; total, 255,984. CALENDAR, the Roman, introduced by Romulus, 738 A.C.; corrected by Numa Pompilius, 713 A.C.; the solar system settled by Julius Cæsar, 45 A.C., which prevailed until pope Gregory XIII. This pope observing the difference of time, caused by the difference between 365 days five hours and forty-nine minutes, and 365 days six hours, finding it had amounted to ten days, ordained that in 1582 the year should consist of only 365 days; and then to prevent further irregularity, it was determined that a year beginning a century should not be bissextile, with the exception of that beginning each fourth century; thus 1700 and 1800 were not bissextile, nor will 1900 be, but 2000 will be a leap year. In this manner, three days are retrenched

in 400 years, and the calendar is made, as nearly as possible, to correspond with the solar year.

The bulk of the cargoes exported was tea and silk.—Tea is grown in all the southern provinces of China, in like manner; good tea is grown only in a few places; the black tea exported by Europeans is grown in the provinces of Fuh-keen and Quan-tung, and the green teas in Tche-Kiang and Nagan-Hoc; there are thirty-six kinds of tea, but of these thirteen varieties alone are exported by Europeans, viz. :—

BLACK TEAS.

Pekoe	1st picking.
Orange Pekoe	"
Caper	"
Ankoi Souchong	2nd picking.

The leaves are plucked from the shrubs and trees three times a year—in April, July, and September; the finest tea is the first picking, and these buds are sometimes mixed

with the blossoms of the sweet olive, which impart to them a delightful fragrance, and the tea is then called Flowery Pekoe; the later gatherings are of a coarser and darker leaf; the average amount exported for British consumption is 40,000,000 lb., and the total consumption of England and her dependencies is 58,000,000 lb.; the annual income derived from tea is £3,300,000; during the last twenty years, £80,000,000 has been paid into the British exchequer as duties upon tea. The following table shows the amount of tea exported from China, for the use of the world:—

Great Britain, &c.....	50,000,000

CHOCOLATE introduced into Europe, from Mexico, 1520; sold in the London coffee-houses, 1650.

CHOLEBA-MORBUS, or "Indian Cholera," to distinguish it from the English disease called Cholera, is said to have appeared first at Jessore, in Bengal, 1817; from thence it travelled south-west to the Mauritius, 1819; south-east to Timor, which it reached in 1823, by Rangoon, Sumatra, and Java; Manilla, 1820; Pekin, 1821, by way of Tonkin, Canton, and Nankin; visiting most of the large towns of Hindostan, it reached Lahore by Delhi, 1827; and thence through Cabul to Oranburg, which it visited in 1823, 1827, 1829, and 1830, but does not appear to have passed westward from thence. From Bombay, 1818 and 1830, it was traced up the Persian Gulf to Ispahan and Yezd in one direction, and so northwards to Teflis, 1830, and to Astracan 1823 and 1830; whence it travelled to Odessa, 1830; to Moscow, 1830; to Dantzic and Warsaw, 1831; and from Dantzic to Hamburg. A second branch of its Bombay career passed to Basora, 1821, Bagdad, Aleppo, and

Damascus. In England it appeared first at Sunderland, as supposed *via* Hamburgh, Oct. 26, 1831; vessels from Sunderland arriving at the Nore were ridiculously ordered to perform quarantine, Dec. 4, 1831, while the roads on shore were open for passengers as usual; the disease appeared in Edinburgh first on Feb. 6, 1832; it was first observed at Rotherhithe and Limehouse, in London, Feb. 13, and in Dublin, March 3, 1832: the mortality was considerable, but not at all equal to that on the Continent. It reached Paris between March and August, 1832, and 18,000 were destroyed by it. It raged in Rome, the Two Sicilies, Genoa, Berlin, and other European localities, July and Aug. 1787. In 1848-9, the cholera again visited England; the number of deaths in London for the week ending Sept. 15, 1849, was 3183, the average being only 1008; the number of deaths by cholera alone, from June 17 to Oct. 2, in the same year, was in London 13,161; then the mortality sank and finally terminated about October 13, 1849. —The mortality of this formidable disease may be partly judged by the following table of cases in 1831 and 1832:—

In Sicily, 1837, the 7th of June to 6th of August, the number of deaths amounted to 23,546; till the 1st of July an account was kept of the number of cases, but after that the disorder raged with such fury that it was scarcely possible to register even the deaths. At the first appearance of the pestilence, Palermo contained 200,000 inhabitants, including strangers; about 40,000 fled, so that if the deaths are considered with respect to the 160,000 souls that remained, it appears that in two months more than a seventh part of the whole population died. Of the higher classes and church dignitaries, 120 fell victims; among these were Marchese Artale, President of the Supreme Court of Appeal, and the celebrated Abbate Scina, of the parochial clergymen of Palermo only one survived, and of the nuns of the convent of Martorana not one remained alive.—In

CHRISTIAN Era, dating from January 1, in the middle of the 4th year of the 194th Olympiad; in the

753rd from the building of Rome; and of the 4714th of the Julian period. It was introduced in the sixth century, but was not generally used at first. For modern chronology it began to be used in 516.

CHRISTIAN, and Most Christian King, the title given by pope Paul II. to Louis XI. of France, 1469.

CHRISTIANITY, founded by the apostles of Christ, who suffered under Pilate, as supposed, in his 33rd year. The persecution of, commenced in 64. It is said to have been propagated in Britain in 156; but this is doubtful, as well as the reign of king Lucius as a Christian king, in 179. The true era of Christianity in England commenced under St. Austin, 596. Its introduction into Ireland and Scotland is of uncertain date. Constantine the Great embraced Christianity, 312; Clovis, in France, 496; Switzerland, 643; Denmark, under Harold, 827; Bohemia, 894; Russia, 940; Poland, 992; Hungary, 994; Norway and Iceland, 1000; Prussia, 1227; Lithuania, 1386; Pomerania and Norway, 1200; reinstated in Greece in the 16th century.

CHRISTMAS-DAY, a festival instituted by the Roman Catholic church, 98; ordered to be held as a solemn feast, on Dec. 25, by Pope Telephorus, about 137; holly and mistletoe introduced into it in this country, from the usages of the Druids. The real Christmas-day is unknown, or at least conjectural; some authorities state that it is probable Christ was born in April or May of the Julian year 4709: St. Chrysostom says, that in primi-

tive times Christmas and Epiphany were celebrated at one and the same feast; and that it was but a little time before, that Christmas had been celebrated at Antioch on the 25th of December, as a distinct feast, and that the usage came from the west: as late as the twelfth century, the Armenians made but one feast of both days.

CHRISTMAS Boxes originated in the Roman Paganalia, instituted by Servius Tullius, and celebrated in the beginning of the year, when an altar was erected in every village, where persons gave money; two of these Paganalian boxes, found under Mount Cælius at Rome, are described by Count Caylus; they were used by the Roman apprentices, like those of our times, to collect their yearly gifts, and were made of pottery; in one of them some denarii were found. The Heathen plan was commuted about 760, to collect alms for masses, in order to absolve the debaucheries of the season, which servants were unable to pay.

CHRISTMAS Island, in the Pacific Ocean, so named by Captain Cook, from having landed upon it on Christmas-day, 1777.

CHRISTOPHE, crowned Emperor of Hayti at Cape François, June 2, 1811. Shot himself during a revolt of his subjects, Oct. 6, 1820; he founded an archbishopric and bishoprics, April 5, 1811.

CHRISTOPHER, St., island of, discovered, 1595; settled by the English, 1626.

CHRONOLOGY, or events in the order of their time, in some form of record, common to most nations. The Chinese affect the remotest antiquity. The Jewish is probably that which is most to be depended upon, as far back as the reigns of Rehoboam and Solomon, but not further, with any corroborative aids. The Jewish chronology commences with the creation of the world, 4004; the deluge, 2348; death of Abraham, 1821; drowning of Pharaoh, 1491;

death of Joshua, 1443; death of David, 1015. The kingdom divided into ten tribes and two, 975; dispersion of the ten tribes, 721; captivity of the two, 606; return of the two from Babylon, 536; death of Judas Maccabeus, 161; united to the Roman empire, 63.

CHRYSOSTOM, St., made bishop of Constantinople, 398; banished, 404; died, 407.

COIF, worn by lawyers, originally an iron skull-cap worn by knights, introduced before 1259, to hide the tonsure of renegades, who chose to remain as advocates in the secular courts, in despite of canonical prohibitions; some say it was introduced in 1200.

The Gold coin was estimated by Daversant, in 1711, to be £12,000,000; by Anderson, in 1782, to be

£16,000,000; by Chalmers, in 1786, to be £20,000,000; by Phillips, in 1800, to be £37,000,000; by Duke of Wellington, in parliament, 1830, the gold £28,000,000. The rest of the metallic currency £13,000,000; but paper largely supplies the place of coin. In 1840, the currency was reckoned at £45,000,000; and in 1850 in gold and silver £55,000,000. The standard weight of coin in the reign of William I., 1066, was 11, 18, 18 fine gold, and alloy 1, 6; and it continued the same to 1509-1532. In the same year it was also changed to 11, and 1 alloy. In the 1st and 2nd of Edward VI., 1549, it was 10, and 2 alloy; in the same reign, and in 1550, it was 11. 1551 and 1553, it was 11, 18, 18, and 1, 6 alloy; in 1553, again 11 and 1. In 1553, Mary and Elizabeth, 1560 it was 11, 18, 18, and 1, 6. In the 2nd and 35th of Elizabeth, or 1560, 1594, it was 11, and 1 alloy. In 1578, 1585, and 1601, it was 11, 18, 18, and 1, 6 alloy. In 1601-3-4, it was 11, and 1 alloy. James I., 1605, it became 11, 18, 18, and 1, 6. In the 10th of James I., or 1613, 11 and 1. In temp. Charles II., 1627,—1661, it was 11, 18, 18, and 1, 6 alloy. From 12th Charles II. to George III., it was 11 and 1. A pound troy of gold was coined into £9 money in the reign of William Rufus, 1087. Edward III., 1345, it was £15, and £13 : 3 : 4:—

Twenty shillings of the time of George III. was worth, in the reign of William II., just £5: 12: 8½.

In 1402 to 1422, it was worth £3: 0: 10½d. In 1465, £2: 8: 3½; in 1482 and 1494, £2: 5: 0½. In 1545 it had fallen to £1: 11: 1; to £1: 2: 10 in 1613; to £1, 1s. in 1671. In the reign of William III. to 19s. 6½d., and in 1717 to 1762, reign of George III., it rose to £1. Twenty shillings of the reign of William II., answered to sixty-two of the reign of George III. The gold coin of the reign of George III., as now, consists of 22 carats fine gold, and two of some other metal, as silver or copper. The guinea was so called, being coined of African gold, about 1690. The clippers so reduced the coins in 1695, that a guinea went for 30s. of clipped silver. Fine silver is to standard silver as 1 to '9250, and sterling to fine as 1 to 1·081081081. Fine gold to standard gold is in value as 1 to '91667, or as 24 to 22. Standard gold is to fine gold as 1 to 1·090909090. *Temp.* George III.

COINAGE, this is now performed by machinery at the royal mint, erected on Tower Hill, 1811; the charge for coinage in all, was £421,000 for £250,000 in copper, £12,000,000 silver, and £55,000,000 gold, between 1816 and 1836. The operation was once performed with a hammer, the coin being placed between two steel dies. In 1553 a mill was invented abroad, and introduced into England by one Bruchier, 1562; a second engine was invented by Balanchier, 1617; Boulton and Watt's engine, for the purpose, was introduced 1788; the present mint machinery, 1811; the standard, pursuant to mint indenture, is after the rate of 66 shillings to the pound Troy of 11 ounces, 2 pennyweights fine silver, and 18 pennyweights alloy, 1821; there are sixpences, twopences, threepences, and fourpences, coined annually for the Queen's Maundy, from 20 lb to 24 lb of silver each coinage.

Coin reclaimed by proclamation, in 1773, 1774, and 1776, amounted to £15,563,393: 10: 8. The loss on

collecting, smelting, and recoining, was £754,019 : 19 : 6.

COINING with a die introduced into England, 1620.

COIN, the penny, taken from the Roman denarius, by the Saxon kings of Kent, 750; sometimes having the effigies of saints; traced to the Norman conquest, 1066, through the Saxon and Danish dynasties; some bore buildings on their faces; William I. copied his predecessor, his pennies are rare; William's, his son, 1087, are scarce; of Henry I., 1100, the pennies are scarce, so is Stephen's rare, 1135; Henry II., 1154, common; Richard I., 1189, none, and John, 1199, only an Irish penny; Henry III., 1216, very rude, his English common, his Irish scarce; Edward I., 1272, and Edward II., 1307, are rude and rare; Edward III., 1326, struck his coins of a penny value both in England and France, as did the Black Prince in Aquitaine, they are not rare; Richard II., 1377, coined both in London and York, his coins are scarce; Henry IV., 1399, Henry V., 1413, and Henry VI., 1425, coined pennies both in England and France; Edward IV., 1460, are more scarce than those of the three Henries who preceded him; there is no coinage of Edward V., 1483; those of Richard III. are much injured by clipping, date 1483, and are very rare; Henry VII., 1485, are common; Henry VIII., 1509, are of good silver and common; of Edward VI., 1547, are very rare; of Mary, 1553, a base coin, very rare; Elizabeth coined both with the hammer and mill, 1558, the former are common, the latter not; James I., 1603, common of one type, of another scarce; Charles I., 1625, of several types, some very common,—one coined at Oxford very rare; the Commonwealth, 1649, are not scarce; Charles II., 1660, the coinage hammered, some good, others bad; the mint marks on the coins are no longer found on the head crowned after this reign; the pennies of James

II., 1685, are seen less frequently than those of Charles II.; William and Mary, 1689, are not common, nor those of William alone; Queen Anne's pennies, 1702, are rare, and her farthings still more so; the coins of the subsequent sovereigns, 1714, 1727, 1760, 1820, and 1830, are common. The coins of Scotland are considered dubious until 1165, under William the Lion, of inferior execution and not uncommon; Alexander II., 1214, rare, those of Alexander II., 1249, not so; John Baliol, 1292, are rare; Robert Bruce, 1306, not common; David II., 1329, and Robert II., 1371, and Robert III., 1390, some not rare; of James I., 1405, there are none; of James II., 1437, very rare, also of James III., 1460; James IV., 1488, billon penny rare; James V., 1513, billon or alloyed penny common; Mary, 1542, rare. Here the Scotch coinage ends.

COINAGE, French, very extensive; copper money first coined there, *temp.* Henry III., 1580; gold first coined at Venice, 1476. The mint of the United States of America, established 1793, issued gold and silver coin; the copper had been delivered before. The gold coins are eagles, half-eagles, and quarter-eagles. *The first is exactly five and forty shillings, English money, or ten dollars American coin. The dollars are coined in the same divisions of half, and quarter, which makes the course of exchange simple, and suits the reckoning to every capacity; ten quarter dollars make the quarter eagle, ten half dollars the half eagle, and ten dollars the eagle. There is, beside, one more silver coin, which is called a dime, and is the tenth part of a dollar. The copper coin is called a cent, and is the tenth part of a dime.

COMBINATION of Workmen forbidden by law, 1799.

COMBAT in England, or trial of right by duel, originated with the Lombards, 659; introduced into England 1096, by William Rufus. The first between Geoffrey Baynard and the Earl of Eu; the latter being conquered, was deemed convicted. In 1818 the Court of King's Bench permitted the trial by battle; the same thing was allowed to prove the guilt or innocence of any party, it was declined, *in re* Thornton. The statute was repealed by 59 George III., 1819. The same mode of trial prevailed in Ireland, the last combat being between two O'Connors, when one had his head

cut off and presented to the lords justices in 1553.

COMEDY, the first regular, enacted in England about 1551.

COMET steam-boat, run foul of by the Ayr, near Greenock, and, sinking, 50 out of 60 passengers were drowned, Oct. 21, 1825.

COMETS, first noted by Nicephorus; two whose splendour eclipsed the noon-day sun, and occupied a fourth of the heavens, 135 A.C. Remarkable one seen in England in the reign of Edward III., 1337; Tycho Brahe explained their return, 1577; one visible from Nov. 3, 1679 to March 9, 1680; orbits proved by Newton to be parabolical, 1704; a brilliant one, 1769; one more brilliant still, Sept., Oct., and Nov., 1811; another appeared, Feb. 28, 1823. Bielas' comet, so called from its discoverer, an Austrian officer, Feb. 28, 1826; one of three, whose reappearance had been predicted, it having a revolution of six years and thirty-eight weeks; its second appearance was in 1832, when the date of its perihelion was Nov. 27; its third appearance was in 1839, and its fourth in 1845. Encke's comet, discovered Nov. 26, 1818, by Mr. Pons, named after Professor Encke for his ascertaining its orbit. It has appeared according to the law predicted, its revolution being three years and fifteen weeks. Halley's comet is also called the great comet; he proved that this comet of 1682 was the same which had appeared in 1456, 1531, and 1607. He then was the first to fix the identity of comets. Halley's comet has a revolution of 76 years. It appeared in 1759, and was at its perihelion March 13. It appeared again, 1835.

COMMANDER-IN-CHIEF, sometimes called captain-general, and general commanding-in-chief. Thus, the Duke of Albemarle was captain-general, 1660; the great Duke of Marlborough, 1702, and the Duke of York, 1790. The Duke of Monmouth was commander-in-chief,

1674; the Duke of Marlborough, 1690; the Earl of Stair, 1744; Sir David Dundas, 1809; the Duke of York, 1811; the Duke of Wellington, 1827. Lord Hill was addressed as general commanding-in-chief, in 1828, while the Duke of Wellington was minister; the Duke of Wellington again became commander-in-chief up to the time of his decease, 1852.

COMMERCIAL Treaties do not seem to have been known to the ancients; the first English on record was in 1272, with the Flemings; the second, with Portugal and Spain, 1308, *temp.* Edward II.

There is also a court in Ireland of the same name and character.

COMMONS, House of, the great representative assembly of the people. It was begun by Simon de Montfort, who ordered two knights from every shire, and deputies from boroughs, to meet the barons and clergy, in order to strengthen his own power against Henry III. The first commons summoned to meet the king in parliament was in 42 and 43 Henry III., 1258; some make the date 1265, because the writs for this last year are the earliest in existence; the first regular parliament was summoned 22nd Edward I., 1294; and the first speaker was Peter de Montfort, 1260, killed at the battle of Evesham, 1265; London sent representatives to parliament, *temp.* Henry III.; Westminster in the reign of Henry VIII.; the number of the members of the House of Commons, since the passing of the reform bill in 1832, is, for England—

CONVICTS first sent, the benevolent Bay, 1788; Jan. 20, vital for Found-
 lip took possession of the seaman,
 with 800 convicts, 1751, aged 84.
 Port Jackson, on the 1st, founded in

the time of St. Louis of France, 1227:

CORFU, one of the Ionian Islands, placed under British administration by the treaty of Paris, 1815, with the other six islands; a dreadful explosion took place here, March 11, 1789, when 72,000 lb of powder and 60 bombshells exploded, and destroyed 180 persons.

CORINTH, kingdom of, established 1355 A.C.; destroyed 146 A.C.; re-built by Julius Cæsar; one of the first cities that embraced Christianity; visited by the Apostle Paul about the year 60; surrendered by the Turks to the Greeks, Feb., 1822.

CORK, Ireland, founded in the sixth century, enclosed 1170; a charter granted to it 1242 by Henry III.; its great charter by Charles II.; a dreadful fire at, 1621; taken by the Earl of Marlborough, from King James 1690, and the Duke of Grafton, son of Charles II., by one of his mistresses, was slain; the Cathedral built by a coal duty between 1725 and 1735; explosion of gun-powder at, Nov. 10, 1810; Queen's College inaugurated Nov. 7, 1840; See of, founded in the seventh century; united with Clôyne 1431, and again separated 1678; See of Ross added to it 1582; Sees of Cork and Clôyne again united 1833.

CORK-Tree brought to England before 1690.

CORN, wheat, said to have been introduced into England in the sixth century; the produce of corn of all kinds in 1850, 40,000,000 quarters; the first account of any importation 1347; of export, 1437; bounties upon its importation, 1686; value of exported corn, 1745, £681,000; the first act for regulating the duties was 13 Geo. III. c. 43, in 1773. Before that time the price of corn was ruled by circumstances, a larger quantity being grown than was consumed; the exportation was prohibited when scarcity prevailed; in 1604-5, the introduction of corn when the price was below 32s. the quarter was prohibited by the landowners; after 1660,

the duty laid on foreign wheat was 16s.; when the price was 53s. or under, the price in favour of the landholder advanced 21s. in half a century, and the duty was to be 8s. when between 53s. and below 63s.; in 1773, the duty was 24s. 3d. when wheat was under 50s. and when at or above 50s. it was only to be 6d.; after the commencement of the French revolutionary war, 1793, when wheat was below 63s., the duty on foreign wheat was to be 30s. 3d., falling to 7½ when the price reached 65s.; in 1815 the landowners did not consider this enough, an act was passed to prohibit all importation until the price in the home-market had been three consecutive months above 80s., and riots and tumults ensued in Westminster; in 1822, the importation of foreign wheat was prohibited when prices were under 70s., admitting it between 70s. and 80s. at a duty of 12s.; when between 80s. and 85s. a duty of 5s., and when above 85s. at a duty of 1s.; this law never operated, for early in 1823, Canning proposed a sliding-scale, which was to a certain extent adopted by the Cabinet of the Duke of Wellington, July 15, 1828, which remained operative until Sir Robert Peel's bill of 29th April, 1842, which last bill disappeared in the annihilation of the corn laws in 1846; it was a sliding-scale which made the duty 20s. with wheat at 51s.—*Wheat*, importation of, the shortness of the home supply introduced foreign wheat to the extent and prices stated during the last 25 years of the last half-century.

CORN prices, foreign; the average prices in France, Belgium, and Prussia, from the year 1828 or 1829 down to 1850. From this it appears that from 1829 to 1850, the average price of wheat in France has been 45s. 7d. per quarter. The highest quotation was in 1847, when it was 67s. 4d. and the lowest was in 1850, when it was 33s. 2d. In Belgium, from 1828 to 1850, the average has been 46s., the highest being 72s. 2d. in 1847, and the lowest 32s. and 2d. in 1834; last year it was 37s. 5d. In Prussia, from 1828 to 1850, the average has been 34s. 3d. The highest price in that country, as well as in France and Belgium, was in 1847, when it was 58s., and the lowest was 23s. 4d. in 1836. In 1850, it was 31s. 6d.

CORN importation bill, free of duty; this bill passed June 26, 1846, by which the duty was reduced to 4s. until Feb. 1, 1847, after which it was to be only 1s. per quarter on all kinds of grain imported into the united kingdom at any prices.

CORN, foreign, allowed to be warehoused and taken out for home consumption, 1813. During the scarcity of 1800-1, there were 2,611,667 qrs. imported, and of oatmeal 9,039,071 cwt.

CORN, wheat prices, 1700, 40s.; 1706, 26s.; 1709, 78s. 6d.; 1712, 26s. 4d.; 1718, 38s. 10d.; 1725, 48s. 6d.; 1730, 36s. 6d.; 1832, 26s. 8d.; 1736, 40s. 4d.; 1742, 34s.; 1744, 24s. 10d.; from 1743 to 1762 inclusive, the average was £1 : 11 : 10 for the twenty years; after this, prices rose to 41s. and 48s. during the American war; in 1784, they fluctuated between 48s. 2d. and 41s. 10d.; in 1785, between 37s. 6d. and 34s. 6d.; in 1786, between 36s. 2d. and 33s.; in 1787, from 44s. to 36s. 1d.; in 1788, from 45s. 1d. to 42s. 9d.; in 1789, the prices varied from 54s. 11d. to 47s.; the fluctuations in the intervening years, down to the repeal of the corn laws, were very various, the extremes (not the average) being in the market as high as

175s. in 1801, and in 1835 as low as 34s.

The Chinese give the world as some hundreds of thousands of years old; and the Chaldean records carried back the age of the world to nearly half a million of years. A period much older than that assigned to it has been proved to be correct by geology. The era of the creation being a fixed reckoning, must count from some of the fixed dates above. That of 4004 is of the most general adoption.

CRETE, island of, now called Candia, conquered by the Saracens, 808; by the Greeks, 961; the Venetians, 1194; and from them by the Turks, 1669.

CRIME in England increased with the population, but not in any excess over that increment, after 1840. Committals, as to education: the number able to read and write, of persons committed, was—

The centesimal proportion of those unable to read and write, was to the whole, in 1841, 34.41; in 1851, 48.68; so that education has not advanced in Ireland in the last ten years. Something must be allowed in the statements of the last four or five years, for the sufferings from famine, and the emigration.

The returns for England did not express later than 1848 the state of education among the prisoners; the committals in 1849 were, 27,816; 1850, 26,183; 1851, 27,960; 1852, 27,510.

CRIMINALS in England numbered one in 1226, in 1826; in Spain, one in 885; in France, one in 1172. From 1814 to 1820, the charges for criminal offences were as follow, in England and Wales:—1815, 7818; 1816, 9001; 1817, 13,932; 1818, 13,567; 1819, 14,254; 1820, 13,710; 1821, 13,115; of these committals there were convicted, 1815, 4883; 1816, 5797; 1817, 9056; 1818, 8958; 1819, 9510; 1820, 9318; 1821, 8788; the rest were acquitted, or no bill found. In the foregoing period there was much distress, and the navy and army had been greatly reduced. In these years the condemnations to death gave our laws the truly Draconic character they had long unenviably obtained. There were condemned to die—

From 1820 to 1824, no less than 362, or 90 persons per annum, were executed in England. From 1824 to 1828, the public feeling becoming directed to a deprecation of such extensive capital punishments, the executions fell to 229, or 50 per annum; they continued to fall, until, between 1832 and 1836, it was 155, only half, or 38 per annum. In London and Middlesex, in 1830, 1831, and 1832, only 16 were executed; in 1833, but 2; 1834, none; in 1835, none; since which period none, except for some peculiarly heinous offence, or murder, or attempted murder, have been executed.

By recent statutes all barbarous punishments have been swept away; such as burning for petty treason, or coining the king's image, or the murder of a husband. The last woman thus executed was burned at the Old Bailey, opposite Newgate; one or two were living in 1852 who saw it; her name was Murphy or Bowman. She was drawn on a hurdle from the door of Newgate to the stake, made to stand on a chair, her neck fastened to a ring at the top, and being surrounded with fagots the chair was taken away and the fagots set fire to, while she was strangling, March 18, 1789. In 1722, Eleanor Elson was burned at the stake in Lincoln, for murdering her husband, and in 1747, at Lincoln, in April, Mary Johnson was burned alive for poisoning her husband, and one Lynn for poisoning his wife was hung at the same time. The proportions of offences in England, Ireland, and Scotland, for the year ending 1849, were;—for England and Wales 30,349 committals—of these no less than 23,910 were crimes without violence—7423 were acquitted, and all thus disposed of;—60 condemned to death; 3251 transported; 19,589 imprisoned or some light punishment; 26 insane; 7423 acquitted. Of the 60 condemned to die, only 12 were executed. Irish committals, 38,522; of these 19,547 were without violence; 20,286 were acquitted; 60 condemned to die—28 of whom were executed; 30 were insane; 2698 were transported; and 15,448 condemned to imprisonment, or light penalties. The Scotch committals were 4909; of which 4 were for murder—2 of whom were executed; offences without violence, 2294; 349 were transported; 3336 were outlawed; 24 were insane; and 1196 were acquitted. In Scotland, the offences against the person in 3,000,000 of population were, in 1849, more than half as many as in England, or 1169 against 2234, the

latter in a population nearly six times as numerous, or 18,000,000. In Ireland, on the other hand, these offences were nearly three times as numerous as in England, with one third of the population.

CROISADES began, 1096, intended to drive the Mahometans from Jerusalem; incited by a fanatic named Peter the Hermit, who urged on Urban II., and he convened a council of 310 bishops at Clermont, at which envoys from the Christian princes attended and kindled those frightful wars, 1094; an army of 300,000 men was raised under Godfrey de Bouillon, 1095; the second was excited by St. Bernard, 1147; the third, in which Richard Cœur de Lion joined, 1191. These wars cost 2,000,000 lives.

CRITICISM, legality of, established in a court of law, Feb. 1794.

CRITICS, and Reviews by; the first of these works was the *Journal des Savans*, by Denis de Salis, in Paris, May 30, 1685; Daniel de Foe published his in England, Feb. 1703. The *Waies of Literature* was the next work begun, 1714; and discontinued 1722. The *Monthly Review* appeared in 1749; the *Critical* in 1756; the *Edinburgh Review* in

1802; and the *Quarterly* 1809. Numerous similar works followed these.

CROSSES, once erected in all parts of the kingdom; Cheapside boasted a splendid one, it had several stories, and was much admired; in the stories were Scriptural images, and the whole structure was surmounted by a cross, supporting a dove; the height of it was parallel with the houses forming Goldsmith's-row, opposite to Wood-street, which street was built by Thomas Wood, goldsmith and sheriff, in 1491; on May 2, 1643, Parliament ordered the cross to be demolished. On Feb. 19, 1547, King Edward VI. rode in grand procession from the Tower of London, to be crowned at Westminster, past this cross, and proclaimed a general pardon for all offenders, except six; the names and titles of those excepted were—Duke of Norfolk, Cardinal Pole, Edward Courtenay (heir to the Marquis of Exeter), Master Forrescue, Master Throgmorton, and Dr. Pate, bishop of Worcester.

Richard II., for £2000, 1386; stolen from the tower by Col. Blood, but recovered 1673.

Crown of England Succession:—Egbert was sole monarch of England, 827. From Egbert the crown descended regularly, with little deviation. In the three succeeding reigns it was suspended by force, till the Saxon line was restored in Edward the Confessor, who was not the next heir, because Edmund II., had a son living, Edward, an outlaw in Hungary. On Edward the Confessor's decease, Harold II. usurped the throne, though the right remained in Edgar Atheling, son of Edward the outlaw, and grandson of Edmund II. At this time, William I., duke of Normandy, claimed a right from a grant of Edward the Confessor, and by conquest transferred the crown to a new family. From him it descended to his second and third son, William II. and Henry I., his eldest son Robert being kept out of possession by his brothers. Henry I. was succeeded by Stephen, grandson of William I., by his daughter Adelicia, his elder brother Theobald waiving his claim, and Mand, the daughter of Henry I., and grand-daughter of Edward the outlaw, to whom the succession belonged, being excluded by force. Her son, Henry II., as heir to William I., succeeded Stephen; though, the proper heirs in the Saxon line were the sons of Malcolm, king of Scotland, by Margaret, the daughter of Edward the outlaw. Henry I. having married the daughter of Edgar Atheling, by whom he had Mand, and her son Henry II. coming to the crown, in some measure restored the Saxon line. From Henry II., the crown descended to his oldest son then living, Richard I., on whose death it was seized by his brother John, Henry II.'s youngest son; in exclusion of his nephew Arthur. On the death of Arthur and his sister Eleanor, without issue, the crown properly descended to Henry III., son of John; and from

Henry III., in an hereditary line of six generations, to Richard II., and this right of succession was declared in parliament by the 25th of Edward III. Richard II. resigned the crown, and the right resulted to the issue of his grandfather Edward III., and should have fallen on the posterity of Lionel, duke of Clarence, the first son of Edward III.; but Henry, duke of Lancaster, descended from the third son of Edward III., usurped it, under the title of Henry IV. Parliament (7th Henry IV.,) settled it on him and his heirs. Henry IV. was regularly succeeded by his son and grandson, Henry V. and VI. Under Henry VI., the house of York, descended from Lionel, duke of Clarence, by the mother's side, began to claim their dormant right, and established it in Edward IV., by parliament. This king was succeeded by his eldest son Edward V., who was deposed and succeeded by his uncle, Richard III., his father's brother, on a pretence of bastardy. During this reign, Henry VII., earl of Richmond, a descendant of the house of Lancaster, usurped the throne, and got his possession established by parliament, 1485. He marrying Elizabeth of York, Edward IV.'s daughter, the undoubted heiress of William the Conqueror, the families of York and Lancaster were united in Henry VIII., her eldest son, who transmitted the crown in succession to his three children, confirmed by parliament 25th Henry VIII., c. 12. This statute was repealed by 28 Henry VIII., c. 7, by which, after the king's divorce from Ann Boleyn, Mary and Elizabeth were bastardized. They were again legitimated, and the succession restored by 35 Henry VIII., c. 1. Parliament now asserted its right of directing the succession by 13 Elizabeth, c. 1. On the death of Elizabeth, succeeded James VI. of Scotland, in England James I., (the lineal descendant of Margaret, daughter of Henry VII., and his wife Eliza-

beth of York, the wife of James IV. of Scotland,) and in him were united, not only the different competitors since the conquest, but likewise the right of the Saxon monarchs, he being the direct lineal descendant of Malcolm, who married Margaret, the daughter of Edmund II. From James I., the crown descended to his second son Charles I.; his eldest son Arthur being dead. After him the succession was interrupted by the usurpation of Oliver Cromwell and his son Richard, but restored in 1660, in Charles II., eldest son of Charles I. He dying without legitimate issue, it passed to his brother James II., whom parliament excluded, and called in William of Orange and his wife Mary, the eldest daughter of James II., 1688, to the exclusion of her father and her brother. On the death of this William III., Anne, second daughter of James II., reigned; and she leaving no issue, the crown was settled by parliament, 12 and 13 William III., on the princess Sophia of Hanover, the youngest daughter of Elizabeth, queen of Bohemia, who was the daughter of James I., and her heirs, being Protestants. She dying before queen Anne, her son George I. succeeded, in which family the crown has regularly descended to the present queen.

DEAN and **Chapter** land sold by Cromwell, April 3, 1649.

DEARTH or **Famine**, in Scotland, where thousands were starved, 306; in England and Wales, where 40,000 were starved, 319; all over Britain, 325; at Constantinople, 446; in Italy, where parents ate their children, 450; in Scotland, 576; all over England, Wales, and Scotland, 739; another in Wales, 747; in Wales and Scotland, 792; again in Scotland, 803; again in Scotland, when thousands were starved, 823; a severe one in Wales, 836; in Scotland, which lasted four years, 954; famines in England, 864, 974, 976, 1005; Scotland, which lasted two years, 1047; in England, 1050. In 1060, fourth year of William I., from the Norman waste in England, the dearth was so great, especially in Northumberland and

the neighbouring counties, that men ate horses, cats, and dogs in all the land between Durham and York, which lay waste nine years; 1086, there was a dearth of cattle, a pestilence and famine, twenty-first year of William I. In 1093, reign of William Rufus, sixth year, the living were scarce able to bury the dead owing to famine and pestilence. In 1112, the 13 Henry I., a dearth of men, cattle, and fowl, from the mortality. In 24th of the same king, 1124, numbers perished of famine. In 1177, the 23 Henry II., the royal household victuals reduced, that a measure of wheat made bread for 100 men, 12d.; a fat ox, 12d.; a fat sheep, 4d.; and provender for twenty horses, 4d. In 1205, a frost, so that the ground could not be tilled, and a quarter of wheat sold afterwards for a mark,

that had been but 12d. before; a quarter of beans or peas for a noble; and a quarter of oats for 3s. 4d., which were usually sold for 4d. In 1222, wheat was sold for 12s. the quarter, (silver was then 1s. 9d. an ounce; in modern money, 5s. 7d.) or 36s. at present. In the 18 Henry III., the frost at Christmas destroyed all the ground, and all the roots in the gardens, and continued till Feb. 2, without snow. The ground could not be ploughed, and poor people died for want of food. At that time, Walter Gray, archbishop of York, hoarded his out of avarice; so that whether "he went to God or the devil men could not determine." Henry III., by debasing the coin, caused great penury and suffering. In 1258, after a wet year, a quarter of wheat sold for 20s., and it could not in some places be had for money; poor people ate the bark off the trees, and also horse-flesh, but twenty thousand were starved in London alone. In 1289, wheat rose from 3d. to 16d., and then to 2s. 6d. the bushel. In 1295, the king searched the monasteries for money, and caused wool and leather to be kept at home; so that there was a great dearth of corn and wine, (exchanged for them before,) 1298; there was a great dearth of wine, so that the communion could not be administered, 1299. . An Act of the common council of London, by which a fat cock was to be sold for 1d.; two pullets, 1d.; a fat capon, 2d.; a goose, 4d.; a mallard, 1d.; a part-ridge, 1d.; a pheasant, 4d.; a heron, 6d.; a plover, 1d.; a swan, 3s.; a crane, 12d.; two woodcocks, 1d.; a fat lamb, from Christmas to Shrovetide, 6d., the rest of the year, 4d. In 1314, food was so scarce and dear, that the common people could not live, and higher prices were forbid to be asked in the city, than was afore fixed, but no meat was to be had, nor fowls; a quarter of wheat, beans, or peas, was sold at 2s.; of malt, for a mark; of salt, 35s. In

1315, prices were no more to be fixed, but the dearth was so great through rain, that wheat sold at 40s. The mortality was so great that the dead could hardly be buried; the beasts and cattle died; horse-flesh was esteemed a great delicacy; the poor stole the dogs to eat that had fattened on the corrupted cattle; some ate their own children; thieves in prison devoured each other; the making malt was stopped, by ordering ale to be sold at 1d. per gallon. In 1330, the corn could not ripen, peas in the green shells were served in place of apples and pears at All-hallow and Martinmas-day; there was no harvest till after Michaelmas. In 1355, the Irish brought in corn in plenty to the relief of the people. In 1358, there was a great dearth and pestilence, called the "second pestilence." In 1369, so great was the scarcity in London, that a bushel of wheat sold for 2s. 6d.; of barley for 20d.; and of oats for 12d. In 1379, a bushel of wheat was bought for 6d.; a gallon of white wine for 6d.; and of red for 4d. In 1391, there was a great dearth of corn for two years, and when green fruit came, the people devoured it so eagerly that they got fluxes and died. Corn was now procured from beyond sea, and 2000 marks were taken out of the orphan's chest of London to pay for it, besides £20 a-piece from the aldermen. In 1438, by reason of great storms, a scarcity was produced. In 1439, wheat sold in London at 3s. the bushel; malt at 3s. the quarter; and oats at 8s. Men eat beans, peas, and barley. Ships laden with rye came in, but the poor lived upon fern roots. In 1486, wheat was again costly, and so in 1491, 1494. In 1521, wheat was 20d. the bushel. In 1521, *temp.* Henry VIII., there was both famine and pestilence; wheat sold at 20s. the quarter. In 1526-27, there fell so much rain before the end of January, that the ground was not dry at the end of April, when it again rained till

June, and the corn failed, and throughout England numbers died of want. In London wheat came in from Dantzic, which made it cheaper there than in the country parts; it was brought in by the merchants of the Stiliard. In 1573, there was a great scarcity for all that had not money. In 1586, the poor were relieved by the government, the price of grain being excessive, and wheat in London 8s. the bushel. In 1594, grain became 8s. the bushel again. In 1595, wheat was from 1*s.* to 4 marks the quarter, though some importations occurred; the London prentices, pinched in the stomach, stole food, and were whipped and set in the pillory. In 1596, the last five months of the year were wet, and meal sold for 10*s.* the bushel; but corn now flowed in from Dantzic through the merchants, and corn could be had for money, with the price high. In 1595, two millions were expended on the importation of corn; one in 1748; another in 1798; in 1800-1, when wheat sold in England at the beginning of the year at £7 and £8 the quarter. The following were the average prices in the counties named, from March 7 to March 14, 1801:—Middlesex, 168*s.* 10*d.*; Surrey, 167*s.* 2*d.*; Hertford, 148*s.* 10*d.*; Bedford, 150*s.*; Huntingdon, 160*s.*; Northampton, 140*s.*; Rutland, 138*s.* 6*d.*; Leicester, 148*s.* 1*d.*; Nottingham, 138*s.* 8*d.*; Derby, 145*s.* 4*d.*; Stafford, 161*s.* 9*d.*; Salop, 174*s.* 4*d.*; Hereford, 170*s.* 7*d.*; Worcester, 184*s.* 8*d.*; Warwick, 178*s.* 1*d.*; Wilts, 166*s.* 4*d.*; Berks, 170*s.* 6*d.*; Oxford, 171*s.* 6*d.*; Bucks, 156*s.*; Essex, 159*s.*; Kent, 161*s.* 10*d.*; Sussex, 164*s.*; Suffolk, 160*s.* 1*d.*; Cambridge, 151*s.* 5*d.*; Norfolk, 144*s.*; Lincoln, 129*s.* 11*d.*; York, 133*s.* 2*d.*; Durham, 190*s.* 9*d.*; Northumberland, 136*s.* 8*d.*; Cumberland, 145*s.* 3*d.*; Westmoreland, 152*s.* 2*d.*; Lancashire, 157*s.*; Cheshire, 156*s.*; Gloucester, 187*s.* 1*d.*; Somerset, 176*s.* 11*d.*; Monmouth, 179*s.* 3*d.*; Devon, 150*s.* 2*d.*;

Cornwall, 137*s.* 5*d.*; Dorset, 172*s.* 9*d.*; Hants, 170*s.* 5*d.*; N. Wales, 136*s.*; S. Wales, 133. In the province of Vellore, in India, in 1810, 6000 persons perished of famine. In the diocese of Drontheim, Norway, in consequence of Sweden intercepting the supplies, 5000 persons perished. In Ireland, in 1845, began the failure of the potatoe crop, which continued for four years, causing pestilence, fever, and famine, to a degree never before known in these islands. Thousands died, many more emigrated, although £10,000,000 was voted by England for their relief; but death did its work faster. When the census of 1831 was taken there were 7,784,934; in 1841, there were in Ireland 8,175,124 persons; and in 1851, the return showed but 6,515,794. Many had emigrated, but famine and pestilence had taken more.

DEATH, Captain, killed in an engagement with a French privateer, one of the most desperate ever known on both sides, Dec. 28, 1756.

DEATH, punishment of, (*see* Criminals). The modes formerly used puzzled invention to inflict torment. Hangings, drowning, and quartering commenced in England in 1241. The punishment itself for many offences was abolished by the acts of 4 and 10 George IV., 1824 and 1829; again by acts 2 and 3 William IV., 1832; but forging wills and powers of attorney to transfer stock were still made capital. Death abolished in all cases of forgery by 1 Vict., July 17, 1837.

DEATHS, Parish Register of, established by Cromwell, Earl of Essex, 1536; more formally executed, 1593, after the great plague that year. The great registration act, passed April 17, 1836, renders the parochial registers of small moment, because all deaths, births, and marriages must be registered by the proper officer, whether of churchmen or dissenters, and that alone is

legal evidence in a law-court from the above date.

ECCLESIASTICAL Censorship, ordered in Spain by the bishop of Valencia, under Ferdinand VII., 1828:—"1. No person shall print any book, pamphlet, or any paper, without special license from his Excellency, who will himself consult the 'God-fearing Censors.'—2. The Censors will read all MSS. submitted to them, word by word, taking special care that there be no occult meaning, as the human mind becomes daily more and more cunning, and there is often in modern writing a diabolical meaning concealed in seemingly innocent words.—3. No person shall read any book printed out of Spain, nor any work printed in Spain during the years 1820, 1821, 1822, or 1823, without a special license. As it has been observed, that in this wicked age people care but little for excommunication, and ecclesiastical censure, we enjoin and direct all in authority to fine, and enforce payment, one thousand rials (£60), all who may read, or even possess any book, &c., forbidden in the 3d article;—all who print, or assist in printing, any book or paper without licence;—all who possess handkerchiefs with crosses, or lines making crosses (cross-barred or chequered), and use them to wipe their noses, or for any other dirty purpose."—The fine is to be rigidly enforced for a first offence; and for those

obdurate and wicked men who shall sin a second time, "his Excellency well knows how to deal with them!"

ECLIPSES known to the Chinese 120 years before Christ—the first of the moon recorded, 721 years A.C. at Babylon; March 19, at 8.40 p.m., at Syracuse; 413 A.C., at Rome; 168 A.C., predicted by Q. S. Giving in England and Wales, 656,337, and in the United Kingdom 812,936 registered electors, in 1832; and taking the total number of representatives at 658, the proportion will be, on the average of Great Britain, 1303, and in the United Kingdom 1235 electors to one representative. Taking the gross population of the 40 counties in England (exclusive of the population of the cities, boroughs, towns, and universities which are represented) at 8,336,263, and the number of electors 344,564, there will be one elector in every 24 of the population; whilst the gross population in the 185 cities, boroughs, and towns, being 4,754,742, and the number of electors, 274,649, there will be one elector in every 17 of the population. In Wales, the county population is 609,871, and the electors are 25,815, so that there is one elector in every 23 persons; whilst in the 14 districts of boroughs, the population being 190,311; and the electors 11,309, the proportion is one in 17. In Scotland, the county population is 1,500,107, and the number of electors 33,115, which will give one elector in every 45 persons; whilst in the burghs, the population being 865,007, and the electors 41,332, the proportion is one in every 27 persons. In Ireland, the population of the 32 coun-

ties is 7,027,509, the number of electors 60,607, and the proportion is one elector in every 115 of the population; whilst 34 cities and boroughs, with 31,545 electors, and a population of 739,892, give a proportion of one elector in every 22 persons. The total population of the 114 counties in the United Kingdom being 17,473,750, and the number of electors 464,101, the proportion of electors will be one in every 37 persons; whilst the population of the 309 cities and boroughs of the United Kingdom being 6,655,952, and the number of electors 341,835, the proportion will be one in every 18 persons. The population of Great Britain being 16,262,301, and the electors 720,784, the proportion will be one elector in every 86 persons. The population of Ireland being 7,767,401, and the electors 92,152, the proportion will be one elector in every 86 persons. In the United Kingdom, the proportion of electors to the gross population, is one elector in every 29 persons. The 114 counties in the United Kingdom send 253 members, and the 309 cities and boroughs send 405 members to Parliament. In Great Britain there are 1303 electors, on the average, for every representative; whilst in Ireland there are only 877 electors for every representative. In England there is one representative in every 27,794, and in Wales one in every 27,790 of the gross population; whilst in Scotland there is one representative in every 44,624, and in Ireland one in every 73,975 of the gross population. If the whole population of the United Kingdom were equally divided into 658 districts, there would be 36,519 souls for every representative.

ENGHEIN, Battle of, between William III. of England and Marshal Luxemburg, fought, Aug. 3, 1692, the English being defeated. The Duke d'Enghein shot after his condemnation by a military court at Vincennes, Mar. 20, 1804.

ENGINEERS, civil and military, the latter were once called trench masters, 1622; the chief engineer, camp master-general, 1634; the corps of engineers of the army was once a civil corps, but made a military one, and directed to act with the artillery, April 25, 1787.

ENGINEERS, an association called civil, established, 1828.

ENGINES for extinguishing fires, invented, 1663; improved, 1752.

ENGINEER, building and machinery used in collieries, to destroy, made a capital offence, 1815.

ENGLAND, said to have been so named by king Egbert, 829, in an official form; generally supposed to be derived from the Saxon *Angles*, and *land* or *land* for country. Originally inhabited by a branch of the Gauls or Celts; the extreme west, or Cornwall, seems to have been known to the Phœnicians and Carthaginians, who traded there from Gades, or Cadiz, for tin, a thousand years before Christ. The western part, in the time of Julius Cæsar, inhabited by the Belgæ, the northern by the Brigantes, South Wales, by the Silures, and Norfolk and Suffolk by the Iceni. Invaded by Julius Cæsar, 55 B.C.; subdued by Claudius, 48 A.D.; completely so by Agricola, in 85; the Romans kept possession till 427; ravaged by the Picts, 448; conquered by the

Saxons, 455, invited over by the ancient inhabitants; they divided it into seven kingdoms, called the heptarchy; erected into a kingdom by the union of all the kingdoms of the heptarchy, near 400 years after the arrival of the Saxons, 827; it was called England by order of Egbert, the first king of England, in a general council held at Winchester, A.D., 829; the name of England and of Englishman, had been used as far back as 688, but had never been ratified by any assembly of the nation; conquered by the Danes, 867; recovered by Alfred, 878; divided into counties and hundreds, 886; a general survey made, and the rolls deposited at Winchester, 896; an inglorious peace made with the Danes, and tribute agreed to be paid annually, besides £10,000 in money, provided they retired, and discontinued their invasions, 993; in 1002 the Danes broke the agreement, committed horrid cruelties and devastations, and the timid Ethelred II. paid them no less than £36,000 for peace, which sum was levied by a tax on all the lands in England for Danegelt, by which ignominious name this first land-tax was known and collected in England, till it was suppressed by Edward the Confessor, in 1042, when it was £40,000 annually; William I. revived it as a crown revenue; in 1013, Swein totally conquered England, was proclaimed king, and obliged Ethelred to retire to the Isle of Wight, who sent his wife and sons to Normandy; it remained in the hands of the Danish kings till 1042; William, Duke of Normandy, claimed the crown, invaded England, defeated the reigning king, Harold II., and the English were next governed by the Norman line, 1066; a new survey made of England, and the register called Doomsday-book, being, however, only an alteration and improvement of Alfred's, 1080; the taxes were levied according to this survey till 13 Henry VIII., 1522, when a more

accurate survey was taken, and was called by the people the new Doomsday-book; put under an interdict by the Pope, for John's opposing his nomination to the see of Canterbury, 1201; interdict taken off on John's submission, 1214; all in arms, 1215; Magna Charta was confirmed in this year; underwent a reformation in government, 1258; put under an interdict on Henry VIII.'s shaking off the Pope's supremacy, 1535; the crowns of England and Scotland united in the person of James VI. of Scotland, who succeeded to the throne of England by the title of James I., 1603; the two kingdoms united by the consent of both nations, and thenceforth named Great Britain, 1707; Ireland united to England and Scotland, and the whole denominated the British empire, Jan. 1, 1801; Prince of Wales sworn in regent of the United Kingdom, during the indisposition of George III., Feb. 5, 1811.

ENGLAND, the first geographical map of it, 1520. The island of Great Britain is about 520 miles in length, and the circuit of its coast makes about 1800 miles. The part constituting England and Wales is in length, from Newhaven, in Sussex, to Berwick-upon-Tweed, 355 miles, and in breadth, from the South Foreland in Kent to the Land's End in Cornwall, 325 miles. The area of England and Wales, computed in acres, has been very differently stated by different authors; for as it has never been ascertained by an actual survey, various modes of computation have been adopted, which have disagreed materially in the result. The following are the principal estimates on this point:—By Sir William Petty, 28,000,000 acres; Dr. Grew, 40,000,000 acres; Dr. Hailey, 39,938,500 acres; Templeman, 31,648,000 acres; Arthur Young, 46,916,000 acres; Rev. H. Becke, 38,498,572 acres. In the returns

House of Commons in 1804, it was stated that by the best computation England and Wales contained 58,335 square statute miles, and 37,334,400 statute acres. Scotland, with its islands, contains about 21,000,000 acres. The soil of South Britain is annually cropped in the following proportions:—Wheat, 3,080,000 acres; barley and rye, 850,000 acres; oats and beans, 2,800,000 acres; clover, rye-grass, &c., 1,120,000 acres; turnips, carrots, cabbages, &c., 1,120,000 acres; fallow, 2,100,000 acres; hop grounds, 33,000 acres; nursery grounds, 8,500 acres; fruit and kitchen gardens, 45,000 acres; pleasure grounds, 16,000 acres; land depastured by cattle, 17,000,000 acres; hedges, copses, and woods, 1,600,000 acres; ways, water, &c., 1,282,100 acres. Cultivated land, 31,056,600 acres; commons and wastes, 6,277,800 acres. Total, 37,334,400 acres. The number of horses for which duty was paid 1,780,000. Their annual consumption of food, reckoned by the produce of acres, is—200,000 pleasure horses, 5 acres each, 10,000,000 acres; 30,000 cavalry, 5 acres each, 150,000 acres; 1,200,000 husbandry, 4 acres each, 4,800,000 acres; 350,000 colts, mares, &c., 3 acres each, 1,050,000 acres. Total, 7,000,000 acres. The total population of Great Britain, as it appeared by the returns made in 1801, including the army, navy, and merchant seamen, was 10,942,646; to which if the islands of Guernsey, Jersey, Alderney, and the Scilly islands, are added, it might then be taken at 11,000,000. It is evident that the welfare of a nation, and its political strength, do not depend so much on its numerical population, as on the manner in which that population is employed; and the proportion of productive to unproductive labourers of which it consists. No accurate account of this kind has been taken; but the following estimate of the different classes of persons who compose the present

population of Great Britain, was not at the above period far from the truth, and a proportionate addition under each head will give the enormous increase.—*See Census.* Nobility and gentry, 5000; clergy of the churches of England and Scotland, 18,000; ditto, dissenters of every description, 14,000; army and militia, including half-pay, &c., 240,000; navy and marines, 130,000; seamen in the merchant's service, 155,000; lightermen, watermen, &c., 3500; persons employed in collecting the public revenue, 6000; judges, counsel, attorneys, &c., 14,000; merchants, brokers, factors, &c., 25,000; clerks to ditto, and to commercial companies, 40,000; employed in the different manufactures, 1,680,000; mechanics not immediately belonging to ditto, 50,000; shopkeepers, 160,000; schoolmasters and mistresses, 20,000; artists, 5000; players, musicians, &c., 4000; employed in agriculture, 2,000,000; male and female servants, 800,000; gamblers, swindlers, thieves, and prostitutes, &c., 150,000; convicts and prisoners, 10,000; aged and infirm, 293,000; wives and daughters of most of the above, 2,427,500; children under ten yrs. of age, 2,750,000. Total, 11,000,000. The present population, after the census of 1851, is 20,919,531 for Great Britain.—*See Census.* The productions of the country have no doubt increased in nearly the same proportion.—*See Revenue.* The total income of all classes of the community, both as arising from capital and labour, appears to be nearly as follows:—From rent of lands, £29,000,000; from rent of houses, £8,500,000; profits of farming, or occupation of land, £6,120,000; income of labourers in agriculture, £15,000,000; profits of mines, canals, collieries, &c., £2,000,000; profits of merchant shipping, &c., £1,000,000; income of stockholders, £20,500,000; from mortgages and other moneys lent, £3,000,000; profits of foreign trade,

£11,250,000; profits of manufactures, £14,100,000; pay of army, navy, and merchant seamen, £5,000,000; income of the clergy of all descriptions, £2,200,000; judges, and all subordinate officers of the law, £1,800,000; professors, schoolmasters, tutors, &c., £600,000; retail trades not immediately connected with foreign trade or manufactures, £8,000,000; various other professions and employments, £2,000,000; male and female servants, £2,400,000. Total, £132,470,000. If this statement, the total of which is corroborated by the produce of the late income or property tax, is not far from the truth, it will not be difficult to form a similar estimate of the total national capital, viz., Value of the land, at 28 years' purchase, £812,000,000; value of houses, at 20 years' purchase, £170,000,000; manufactories, machinery, steam-engines, &c., £20,000,000; household furniture, £42,500,000; apparel, provisions, fuel, wine, plate, watches and jewels, books, carriages, &c., £40,000,000; cattle of all kinds, £90,000,000; grain of all kinds, £10,600,000; hay, straw, &c., £6,600,000; implements of husbandry, £2,000,000; merchant shipping, £12,800,000; the navy, £6,000,000; coin and bullion, £24,000,000; goods in the hands of merchants, &c., £16,300,000; goods in the hands of manufacturers and retail traders, £20,000,000. Total national capital, £1,272,800,000. By the calculations of a committee, it is computed that the cultivation of the waste lands would yield to the nation an income of above £20,000,000 a-year, and the agricultural population find additional employment. This class of the population has not increased with the manufacturing ratio. The following was delivered by the committee of agriculture, being a general view of the extent of the island of Great Britain, and the proportion between the waste and uncultivated, and the cultivated part:—

ACRES UNCULTIVATED.

 Scotland26,369,695

73,285,628

The above estimate will give some general idea of the magnitude of this great source of national wealth. Of the value of these wastes, were they improved in the manner of which they are capable, it is difficult to form any adequate idea. At the same time it may be of service to submit some data, as the basis of future calculation. On the supposition, therefore, that there are 22,000,000 of acres of waste and unenclosed lands in the kingdom, the whole may be divided, according to the various qualities of the soil and surface, in the following manner:—

ACRES.

Incapable of all improvement 1,000,000
 Fit to be planted..... 3,000,000
 Fit for upland pasture....14,000,000
 Fit for tillage..... 3,000,000
 Capable of being converted into meadow, or water-meadow..... 1,000,000

Total.....22,000,000

The 1,000,000 of acres, as being incapable of cultivation, must be estimated as of no annual value. The 3,000,000, supposed to be fit for plantation, according to the ingenious calculation of the late bishop of Llandaff, may be worth 8s. an acre, or in all, £1,200,000 per annum. This, however, is the value

of the annual produce, and not rent. The 14,000,000 of acres of upland pasture, when improved, cannot be calculated at less than 5s. per acre of rent, or £3,500,000 per annum. The 3,000,000 of acres supposed to be convertible into arable land, would certainly, when enclosed, be worth at an average 10s. per acre, or £1,500,000 per annum. The 1,000,000 of acres supposed to be converted into meadow, or water-meadow, cannot be calculated at less than 30s. per acre, or £1,500,000 in all. The account may then be thus stated:—

£

Rent of the upland pasture..... 3,500,000
 Rent of the arable land... 1,500,000
 Rent of the meadows..... 1,500,000

6,500,000

This must be multiplied by 3, in order to give the annual produce..... 3

19,500,000

Add the annual produce of 3,000,000 of acres, supposed to be planted, amounting to 1,200,000

Total.....£20,700,000

ENGLISH Kings.—Before the Romans appeared, the Britons, who then possessed the country, were divided into several nations, each of them governed by their own kings. Julius Cæsar landed in England, Aug. 26, 55 A.C., but he did not long remain. Even in 14 A.D., in the reign of Tiberius, the Romans had little footing in England; Claudius first subdued the island in 43, and Britain became a member of the Roman empire; many of the tribes had still their proper kings, who were suffered to govern by their own laws, provided they were tributary; such were Cogidunus and Frastitagus, mentioned by Tacitus. Lucius, who is said to be the first Christian king, died in 181, and left the Ro-

man empire heir to his kingdom; and Coilus, the father of Helena, mother of Constantine the Great. Two emperors of Rome died in England, at York, Alexander Severus and Constantius. After the Romans had quitted Britain, upon the irruption of the Goths into Italy during the reign of Honorius, that is, in 410, they sent a legion to protect them, in 423, during the reign of Valentinian. In 427, they left Britain, after endeavouring to arouse the inhabitants to warlike habits in their own defence, in vain. The government returned to the Britons, who chose for their king, Constantine, brother of Aldroinus, king of Brittany, in France, a prince of the British blood, to whom succeeded Constantine, his son; then Vortigern, who usurped the crown; but being harassed by the Scots and Picts, in 448, to maintain his usurpation, first called in the Saxons, at that time hovering along the coast of Britain, in 449. These having got sure footing in the island, never left the Britons quiet till they were possessed of the whole; and though they were overthrown in many battles by king Vortimer, the son and colleague of Vortigern, and afterwards by king Arthur, yet the Britons were soon after his death so broken and weakened, that they were forced at last to retreat, and exchange the plain and fertile part of Britain for the mountains of Wales and Cornwall; a portion had before gone from Cornwall into Brittany and founded that province. Cadwallader, the last king of the Britons, began to reign 683, killed in battle Lothaire, king of Kent, and Ethelwold, king of the West Saxons; turned monk, and died at Rome. Thus the Britons left the stago and the Saxons entered. By these the country was divided into seven kingdoms, called the Heptarchy; Kent, the first kingdom, was in Julius Cæsar's time the sovereignty of four petty princes, and never called a kingdom till Hengist erected it into

one. *The Heptarchy*—The kingdom of Kent contained only the county of Kent; its kings were—

This kingdom began 584, ended 828. Its first Christian king was Peda. The Saxons, though they were divided into seven kingdoms, were for the most part subject only to one monarch, who was styled king of the English nation; the most powerful giving the law unto the others, and succeeded as follows:—*Henrist*, first monarch of Britain, landed in the Isle of Thanet, 449; laid the foundation of the monarchy in 455; defeated Vortimer at Crayford, January 457; massacred 300 British nobles on Salisbury plain, May 1st, 474. He bore in his standard the white horse, blazoned in the same manner as now borne by the dukes of Brunswick. He was born at Angria, in Westphalia, reigned 34 years, died in 488.—*Ella*, second monarch, landed at Shoreham, in Sussex, 477; assumed the title of king of the South Saxons, 491; died 499.—*Cerdic*, third monarch, arrived in Britain, and overcame Arthur near Chard, Somerset, 519; began the kingdom of the West Saxons the same year; died 534.—*Kenric*, second king of the West Saxons, fourth monarch, eldest son of Cerdic, succeeded in 534, and died in 560.—*Ceaulin*, the third king of the West Saxons, and fifth monarch, succeeded his father, 560; seized on Sussex in 590; abdicated in 591; and died in banishment, 593.—*Ethelbert I.*, fifth king of Kent, and sixth monarch, 593; St. Augustine first arrived in his dominions, who, with his followers, were entertained by the king at Canterbury, where they settled; to whose doctrine Ethelbert became a convert. He

gave Augustine an idol temple without the walls of the city, as a burial-place for him and his successors, which was converted into the first monastery. This king was the first that caused the laws of the land to be collected and translated into Saxon. He died Feb. 24, 617, and was buried at Canterbury.—*Redwald*, third king of the East Angles, seventh monarch, 616; he died 624.—*Edwin the Great*, king of Northumberland, succeeded as eighth monarch in 624. He was the first Christian, and the ninth king of Northumberland. He lost his life in a battle at Hatfield, Oct. 4, 633.—*Oswald*, tenth king of Northumberland, and ninth monarch of Britain, 634. He was slain at Maserfield, in Shropshire, Aug. 1, 642.—*Oswy*, eleventh king of Northumberland, tenth monarch of Britain, Oct. 13, 634. He defeated Penda, the Mercian, and Ethelred, king of the East Angles, Nov. 6, 655. He died February 15, 670.—*Wulfhere*, sixth king of the Mercians, eleventh monarch, 671; died 675, and was buried at Peterborough.—*Ethelred*, seventh king of Mercia, and twelfth monarch, 675. He desolated part of Kent, and in 677 destroyed Rochester, and many religious foundations; to atone for which he became a monk, 705, and died abbot of Bradney, 716.—*Kenred*, his nephew, eighth king of Mercia, and thirteenth monarch, 705; reigned four years, and following his uncle's example, became a monk.—*Ceolred*, son to Ethelred, ninth king of the Mercians, and fourteenth monarch, 709; was killed in battle with the West Saxons in 716; and was buried at Lichfield.—*Ethelbald I.*, tenth king of the Mercians, fifteenth monarch, 716; built Croyland abbey, in Lincolnshire. He was slain by his own subjects when he was leading his troops against Cuthred, the West Saxon, at Secondine, three miles from Tamworth, in Warwickshire, and was buried at Repton, in Derbyshire,

757.—*Offa*, the eleventh king of the Mercians, and the sixteenth monarch, 757. He was born lame, deaf, and blind, which continued till he arrived at manhood. He took up arms against Kent, slew their king at Otterford, and conquered that kingdom. He caused a great trench to be dug from Bristol to Basingwerk, in Flintshire, as the boundary of the Britons who harboured in Wales, 774. *Offa* first ordained the sounding of trumpets before the kings of England, to denote their appearance, and require respect. He admitted his son, *Egfrid*, a partner in his sovereignty; and, out of devotion, paid a visit to Rome, where he made his kingdom subject to a tribute, then called Peter-pence, and procured the canonization of St. Alban. At his return he built St. Alban's monastery, in Hertfordshire, 793. He died at Offley, June 20, 794, and was buried at Bedford, in a chapel since swallowed up by the river Ouse.—*Egfrid*, twelfth king of the Mercians, and seventeenth monarch, July 13, 794; but died Dec. 17, following, and was buried at St. Alban's.—*Kenwulf*, thirteenth king of the Mercians, and eighteenth monarch, 795. He conquered Kent, and gave that kingdom to Cudred, 798. He built Winchcomb monastery, in Gloucestershire, where he led the captive prince, Pren, to the altar, and released him without ransom or entreaty. He died in 819, and was buried at Winchcomb.—*Egbert*, seventeenth king of the West Saxons, and nineteenth, but first sole monarch of the English. he conquered Kent, and laid the foundation of the sole monarchy in 823, which put an end to the Saxon heptarchy, and was solemnly crowned at Winchester, when, by his edict, he ordered all the south of the island to be called England, 827. He died Feb. 4, 838, and was buried at Winchester.—*Ethelwulf*, eldest son of *Egbert*, succeeded to his father, notwithstanding, at the

time of *Egbert's* death, he was bishop of Winchester. In 853, he ordained tithes to be collected, and exempted the clergy from regal tributes. He visited Rome in 854, confirming the grant of Peter-pence, and agreed to pay Rome 300 marks per annum. His son *Ethelbald* obliged him to divide the sovereignty with himself, 855. He died Jan. 13, 857, and was buried at Winchester.—*Ethelbald II.*, eldest son of *Ethelwulf*, succeeded in 857. He died Dec. 20, 860, and was buried at Sherborne, but removed to Salisbury.—*Ethelbert II.*, second son of *Ethelwulf*, succeeded in 860, and was harassed greatly by the Danes, who were repulsed and vanquished. He died in 866, was buried at Sherborne, and was succeeded by *Ethelred I.*, third son of *Ethelwulf*, in 866, when the Danes again harassed his kingdom. In 870, they destroyed the monasteries of Bradney, Croyland, Peterborough, Ely, and Huntingdon, when the nuns of Coldingham defaced themselves to avoid being polluted; and in East Anglia they murdered Edmund, at Edmundsbury, in Suffolk. *Ethelred* overthrew the Danes, 871, at Assendon. He had nine set battles with the Danes in one year, and was wounded at Wittingham, which occasioned his death, April 27, 872. He was buried at Wimborne, in Dorsetshire.—*Alfred*, the fourth son of *Ethelwulf*, succeeded in 872, in the twenty-second year of his age; was crowned at Winchester, and is distinguished by the title of *Alfred the Great*. He was born at Wantage, in Berkshire, 849, and obliged to take the field against the Danes within one month after his coronation at Wilton, in Wiltshire. He fought seven battles with them in 876. In 877, another succour of Danes arrived, and *Alfred* was obliged to disguise himself in the habit of a shepherd, in the isle of Athelney, in the county of Somerset, till, in 878, collecting his scattered friends, he attacked and defeated

them in 879, when he obliged the greatest part of their army to quit the land; in 897, they went up the river Lea, and built a fortress at Ware, when King Alfred turned off the course of the river, and left their ships dry, which obliged the Danes to remove. He died Oct. 28, 900. He formed a body of laws, afterwards made use of by Edward the Confessor, which was the groundwork of the present. He divided his kingdom into shires, hundreds, and tithings, and obliged his nobles to bring up their children to learning; and to induce them thereto, admitted none to offices except they were learned; and to enable them to procure that learning, he founded the university of Oxford. He was buried at Winchester.—*Edward* the Elder, his son, succeeded him, and was crowned at Kingston-upon-Thames, in 901. In 911, Leolin, prince of Wales, did homage to Edward for his principality. He died at Farringdon, in Berkshire, in 925, and was buried at Winchester. *Athelstan*, his eldest son, succeeded him, and was crowned with far greater magnificence than usual, at Kingston-upon-Thames, in 925. In 937, he defeated two Welsh princes, but soon after, on their making submission, he restored them their estates. He escaped being assassinated in his tent, 938, which he revenged by attacking his enemy, when five petty sovereigns, twelve dukes, and an army that came to the assistance of Anlaf, king of Ireland, were slain. This battle was fought near Dunbar, in Scotland. He made the princes of Wales tributary, 939; and died Oct. 17, 941, at Gloucester.—*Edmund I.*, the fifth son of Edward the Elder, succeeded at the age of 18, and was crowned king at Kingston-upon-Thames, 940. On May 26, 947, he was stabbed by Leolf, a noted robber, whom he had sentenced to banishment, and died of the wound. He was buried at Glastonbury.—*Edred*, his brother, aged 28, suc-

ceeded in 948, and was crowned at Kingston-upon-Thames, August 17. He died in 955, and was buried at Winchester.—*Edwy*, the eldest son of Edmund, succeeded, and was crowned at Kingston-upon-Thames, in 955. He had great dissensions with the clergy, and banished Dunstan, their ringleader, which occasions little credit to be given to the character the priests gave him. He died of grief in 959, after a turbulent reign of four years, and was buried at Winchester.—*Edgar*, at the age of 16, succeeded his brother, and was crowned at Kingston-upon-Thames in 959, and again at Bath, 973. He imposed on the princes of Wales a tribute of wolves' heads, that for three years amounted to 300 each year. He obliged eight tributary princes to row him in a barge on the river Dee, in 960. He died, July 18, 975, and was buried at Glastonbury.—*Edward* the Martyr, his eldest son, succeeded him, being but 12 years of age, and was crowned by Dunstan, at Kingston-upon-Thames, in 975. He was stabbed by the instructions of his mother-in-law, as he was drinking at Corfe-castle, in the isle of Purbeck, in Dorsetshire, May 18, 979. He was buried at Wareham, without any ceremony, but removed three years after, in great pomp, to Shaftesbury.—*Ethelred II.*, succeeded his brother, and was crowned at Kingston-upon-Thames, April 14, 979. In 982, his palace, with a large part of London, was destroyed by a great fire. England was ravaged by the Danes, who, in 990, received at one payment about £30,000, raised by a land-tax, called Danegelt. A general massacre of the Danes, Nov. 13, 1002. Swein revenged his countrymen's deaths, 1003, and did not quit the kingdom till Ethelred had paid him £36,000, which he the year following demanded as an annual tribute. In the spring of 1008, they subdued great part of the country. To stop their progress it was agreed to

pay the Danes £48,000 to quit the kingdom, 1012. In the space of twenty years they received £469,687 sterling. Soon after Swein entered the Humber again, when Ethelred retired to the isle of Wight, and sent his sons, with their mother Emma, into Normandy, to her brother, and Swein took possession of the whole kingdom, 1013.—*Swein* was proclaimed king of England in 1013, and no person disputed his title. His first act of sovereignty was an insupportable tax, which he did not live to see collected. He was killed Feb. 3, 1014, at Thetford, in Norfolk.—*Canute*, his son, was proclaimed, March, 1014, and endeavoured to gain the affections of his English subjects, but without success, retired to Denmark, and *Ethelred* returned at the invitation of his subjects. Canute returned, 1015, soon after he had left England, and landed at Sandwich. Ethelred retired to the north, but by evading a battle with the Danes, he lost the affections of his subjects, and retiring to London he expired, April 24, 1016.—*Edmund Ironside*, his son, was crowned at Kingston-upon-Thames, April, 1016; but by a disagreement among the nobility, Canute was crowned at Southampton. In June following, Canute totally routed Edmund, at Assendon, in Essex, who soon after met Canute in the isle of Alney, in the Severn, where a peace was concluded, and the kingdom divided between them. Edmund did not survive above a month after, being murdered at Oxford, Nov. 30, 1016, before he had reigned a year. He left two sons and two daughters; from one of which daughters James I. of England descended, and from him William IV.—*Canute* was established 1017; made an alliance with Normandy, and married Emma, Ethelred's widow, 1018; made a voyage to Denmark, attacked Norway, and took possession of the crown, 1028; died at Shaftesbury, 1036, and was buried at Winchester.

Harold I., his son, began his reign, 1036; died May 18, 1039; and was succeeded by his younger brother, *Hardicanute*, king of Denmark, who died at Lambeth, 1041; was buried at Winchester, and succeeded by a son of Queen Emma, by her first husband, Ethelred II.—*Edward the Confessor* was born at Islip, in Oxfordshire, began his reign in the 40th year of his age. He was crowned at Winchester, 1042; married Editha, daughter of Godwin, Earl of Kent, 1043; remitted the tax of Danegelt, and was the first king of England that touched for the king's evil, 1058; died Jan. 5, 1066, aged 65; was buried in Westminster Abbey, which he rebuilt, where his bones were enshrined in gold, set with jewels, 1066. Emma, his mother, died, 1052. He was succeeded by *Harold II.*, son of the Earl of Kent, crowned in 1066; defeated his brother Tosti and the king of Norway, who had invaded his dominions, at Stamford, Sept. 25th, 1066; but was killed by the Normans at Hastings, Oct. 14 following.—*William I.*, Duke of Normandy, a descendant of Canute, born, 1027; paid a visit to Edward the Confessor, in England, 1051; betrothed his daughter to Harold II., 1058; made a claim of the crown of England, 1066; invaded England, landed at Pevensy, in Sussex, the same year; defeated the English troops at Hastings, Oct. 14, 1066, when Harold was slain, and William assumed the title of Conqueror. He was crowned at Westminster, Dec. 25, 1066; invaded Scotland, 1072; subverted the English constitution, 1074; refused to swear fealty to the pope for the crown of England; wounded by his son Robert, at Gerberot, in Normandy, 1077; invaded France, 1086; soon after fell from his horse and contracted a rupture; he died at Hermentrude, near Rouen, in Normandy, 1087; was buried at Caen, and succeeded in Normandy by his eldest son, Robert, and in

England by his second son, *William II.*, born, 1057; crowned at Westminster, Sept. 27, 1087; invaded Normandy with success, 1090; killed by accident as he was hunting in the New Forest, by Sir Walter Tyrrel, Aug., 1100, aged 43; was buried at Winchester, and succeeded by his brother, *Henry I.*, born, 1068; crowned, Aug. 5, 1100; married Matilda, daughter of Malcolm, king of Scots, Nov. 11 following; made peace with his brother Robert, 1101; invaded Normandy, 1105; attacked by Robert, whom he defeated and took prisoner, 1107, and sent him to England; betrothed his daughter Matilda to the emperor of Germany, 1109; challenged by Louis of France, 1117; lost his queen, May 1, 1118; his eldest son and two others of his children shipwrecked and lost with 180 of his nobility, in coming from Normandy, 1120; married Adolicia, daughter of Godfrey, earl of Louvain, Jan. 29, 1121; in quiet possession of Normandy, 1129; surfeited himself with eating lampreys, at Lyons, near Rouen, in Normandy, and died, Dec. 2, 1135, aged 68; his body was brought over to England, and buried at Reading. He was succeeded by his nephew, Stephen, third son of his sister Adela, by the earl of Blois. He left £100,000 in cash, besides plate and jewels to an immense value.—*Matilda*, or *Maud*, daughter of Henry I., born, 1101; married to Henry IV., emperor of Germany, 1109; had the English nobility swear fealty to her, 1126; buried her husband 1127; married Jeffrey Plantagenet, earl of Anjou, 1130; set aside from the English succession by Stephen, 1135; landed in England, and claimed a right to the crown, Sept. 30, 1139; defeated Stephen at Lincoln, and confined him in Gloucester, 1141; besieged in Oxford, and fled from a window of Oxford castle by a rope, in the winter of 1142; retired to France, 1147; her son Henry concluded a peace with Stephen, 1153. EPOCH or Epocha, the periods of certain important events, which serve to regulate the dates of other events of inferior moment which may follow or have preceded them. The creation, 4004; the deluge, 2348; the Argonautic Expedition, 1225; the destruction of Troy, 1184; the first Olympiad, 776; the foundation of Rome, 753; of Nabonassar, 747; the Selucideæ, 312; the battle of Actium, 38, all before Christ, are noted Epochs. The Christian, or year 1 of Christ; the epoch of Diocletian, 284. The space from epoch to epoch is the era, thus the Christian era began in the year 1, and has extended to 1853; the terms are frequently used as synonymous. The Christian epoch or era was introduced into Italy in 525; into England, 816; the era of Nabonassar is remarkable because of its connection with the astronomical observations made at Babylon, it began Feb. 747; that of the death of Alexander 320 A.C., the Christian or the year 1, was 3062 of the world according to the Jewish reckoning. The Mahometans began their hegra from the flight of their prophet from Mecca, in 622; the Greek Olympiads began in the year of the world 3187. When Constantinople was taken, the reckoning by Olympiads ceased, and the Greeks reckoned by indictions each of 15 years, beginning 313 A.D. The Romans reckoned from the building of their city, 3113 from the creation, and afterwards from the 16th of Augustus, 3936 of the world; this was also used in Spain until the reign of Ferdinand the catholic. The Jews had many epochs, nor can much reliance be placed on their dates before the time of Solomon. They reckoned from the creation, the beginning of time: from the deluge, which they give in 2656 before Christ; from the confusion of tongues, 2786; from Abraham's journey out of Chaldea, 2021; from the Egyptian exode, 2451; from the year of Jubilee, 2499; from Solo-

mon's temple perfected, 2932; from the captivity of Babylon, 3357.

EVESHAM surrendered its charter, June 24, 1682.

EVIL, Touching for the. George I. had the good sense not to pretend to this marvellous power; but the French kings kept up the farce till 1775. Lewis XV. touched no less than 2000 persons, and his predecessor 2500; William III. touched 8577 persons. It appears that Edward the Confessor first undertook this miraculous work, and all the sovereigns of England followed the example, till the accession of the House of Hanover. A form of prayer used for the occasion, and surreptitiously withdrawn, will be found in old prayer-books. The royal touch—such is the force of imagination—was often effective, whether of a Richard III. or a Henry VIII., equally with our more exemplary monarchs.

EVIL, Licences to Subjects to cure the, issued by the church; the following is a genuine copy of one of these episcopal commissions to heal, in 1743:—Robert Nash, Doctor of Laws, Vicar-General in Spirituals of the Right Reverend Father in God, Thomas, by the Divine permission Lord Bishop of Norwich, lawfully constituted. To our well-beloved in Christ, Mrs. Anne Smythies, the wife of the Rev. Mr. Thomas Smythies of Lavenham, in the county of Suffolk and diocese of Norwich, health in our Lord. Whereas we have received sufficient and credible testimony of your skill and knowledge in the art

of curing blotches, breakings out, and such like diseases called the King's Evil. And whereas we have received your consent and subscription to the articles of religion agreed upon by the Archbishops, Bishops, and Clergy of both provinces, at the Convocation holden in London in the year of our Lord Christ 1562, and confirmed by regal authority; and also your oath of allegiance to his Majesty King George II., according to a late Act of Parliament in that case made and provided; have thought fit to license, and by these presents do license, you publickly to use and practice the said art of curing blotches, breakings out, and such like diseases, called the King's Evil, within the diocese of Norwich, and do will this our licence to endure during our pleasure and your good demeanour, and no longer nor otherwise. Dated the 26th of March, in the year of our Lord 1743.—JOHN NARKEK, Notary Publick, Dep. Reg. (The episcopal seal attixed.)

EVIL May-day, a disgraceful riot of the apprentices and populace of London, who were guilty of frightful outrages against all foreigners, because they were permitted to trade in England, May 1, 1517; fifteen of them were hanged, and 400, with ropes about their necks, were pardoned by Henry VIII.

EWELME palace, Oxfordshire, built 1244; fifteen houses burned at the village of, 1424.

EXCHEQUER Office robbed, 1303; papers of, sold as waste, attracted parliamentary attention, 1838.

Excise Duties. These were levied by the parliament to support the contest against Charles I.; they were continued by Charles II., but do not appear to have been so much the subject of general reprobation as when they were increased and riveted on the realm by Sir Robert Walpole about 1733; they were increased in order to take off taxes from the land, the owners of which

desired to throw the burthen upon the people at large; Gresham college was pulled down in 1774, and the excise office erected on its site; officers of the excise were not allowed to vote in parliament, 1782; in 1851, the duties on foreign wines and spirits, on tea, coffee, and tobacco, and numerous articles, being taken off and added to the customs branch of the revenue, the excise was joined to the stamp office in Somerset Place, under the general name of the Inland Revenue Office, and though now reduced to the supervision of a few articles only, the total revenue has increased as the public burthen has been lightened. In 1786, the excise produced £5,540,114; in 1820, £26,364,702; in 1830, £18,644,385; in 1840, £12,607,766; in 1850, £13,985,363; in 1852, £13,356,981, despite continued reductions of some millions. The excise on beer and ale was first imposed in 1643, but fixed, 1690; the tax on beer only paid on malt since 1830.

Excise bill passed 1690.

Excise duty on hops was first levied in 1711, in which year it produced 43,457 bags, and a revenue of £45,608, 17s.; in 1719, 90,317 bags, and £94,832, 17s. duty; in 1739, 70,742 bags, and £74,279, 2s. duty; in 1759, 42,115 bags, and £44,220, 15s. duty; in 1831-2-3, the average returns in pounds weight was 27,991,502lb.; in 1834, Jan. 5, the duty paid was on 32,747,310lb. The average on malt in 1831-2-3, was 36,525,056 bushels; on tea in the above year, 31,829,075lbs; on spirits for the three years' average, 21,978,809 gallons, and in 1831, 21,840,719 gallons; in 1850, the consumption of all kinds was 28,246,987 gallons imperial for the united kingdom, of which 22,962,012 gallons were home distilled from corn. The duty and excisable articles in 1851 were:—

EXPEDITIONS of the English during the war of 1793—1815; Quiberon Bay, French emigrants, 1796 (unfortunate); Ostend, all landed made prisoners, May, 1798; Helder Point and Zuyder Zee, to secure the Dutch fleet at the Texel, Sept. 1, 1799 (successful); Ferrol, Aug. 1800 (unsuccessful); Egypt, under Abercrombie (successful), March, 1801; Copenhagen, Sept. 1807 (successful); Walcheren, July, 1809 (unsuccessful); Bergen-op-Zoom, March 8, 1814 (unsuccessful).

EXPENSES of English Wars. William III., £30,446,382; Queen Anne, £43,360,000; George I., £6,048,267; George II., 1739, £46,418,689; war of 1756, George II. and III., £111,271,996; the American war, £139,171,876, Spanish and Russian proportions, £2,800,000; debt contracted from the commencement of the war to replace the Bourbons to the conclusion of the war in 1815, £374,789,425, besides the taxes and the interest of the debt expended on the same object.—In 1814, the sums expended for the army, navy, and ordnance, amounted to £71,686,707, and if to this sum is added the interest of the debt, all of which had been incurred in the prosecution of wars, it will be seen that these branches of expen-

diture amounted in that one year to £101,738,072, a large part of which was expended in foreign countries, and abstracted from the capital of the nation. The drain which had been thus in operation for a continuous series of years, affords a sufficient explanation of the exhaustion in which the country was placed during the first few years that followed the restoration of peace. The ceasing of a war demand for various articles consumed by the army, or exported to provide payment of loans and subsidies to foreign countries, occasioned loss to the comparatively small number of individuals who had supplied the government, or had conducted certain branches of the export trade; but these persons must have been insignificant compared with the great mass of commercial dealers, who were benefited by the change. The lavish expenditure of the war placed the country in a state unfavourable for taking advantage of the alteration in the years that followed the final overthrow of Napoleon, or they must have been years

of the highest prosperity. The prices of articles of which we were buyers, fell; the goods which we had to offer in exchange, rose in value. During the ten years between 1805 and 1814, the government expenditure exceeded £800,000,000; and, although some considerable part of this amount doubtless came back to individuals, and prevented that expenditure from being altogether a loss of capital to the country, the part which found its way to foreign lands without producing any immediate return was greater than England could bear without suffering, and was in all probability the cause of the difficulties which bore so hard upon the merchants in the few following years, and before the benign influence of peace had adequately remedied the evils. According to the official returns, the wars cost the country, during the present century, upwards of 1000 millions of money, 63 per cent. of which was expended in the 14 years of war, and the remaining 37 per cent. only in 22 years of peace, viz.:—

	14 Years, 1801 to 1814. £		22 Years, 1815 to 1836. £		Total, 36 Years, 1801 to 1836. £
Navy	237,441,798	137,719,606	375,161,404
Army	337,993,912	204,406,907	542,400,816
Ordnance	58,198,904	34,176,949	92,375,853
	<hr/> 633,634,614		<hr/> 376,303,462		<hr/> 1,009,938,076

The average annual expenditure under these three heads was, in the 14 years ending with 1814, £45,259,615; in the 22 years ending with 1836, it fell to £17,104,702. If we confine the comparison of the expenditure to the six years ending with 1836, it will be found that the average amount in this latter period was £12,714,289, or less by 72 per cent. than it was previous to 1814. In the 16 years between 1815 and 1830 the average annual expenditure for naval and military purposes was £18,751,108, compared with which the cost in the six years ending with 1836 exhibits a saving of

32 per cent. In the six years from 1800 to 1814 the expenditure for army, navy, and ordnance services was £348,557,438, being an annual average of £58,092,906. One source of public expenditure bore very hard, consisting of subsidies paid to foreign countries. The following statement shows the expenditure of each year under this head, from 1793 to 1814. The aggregate sum thus abstracted from the national resources in those 22 years amounted to £46,289,495, of which about two-thirds, £30,582,259, were expended in the ten years that preceded 1814:—

FAIRBROTHER, Mr., died at Wigan, in Lancashire, aged 138, May, 1770.

FAIRS and Markets first instituted in England, by Alfred, 886; in France, by Charlemagne, 800; promoted by William the Conqueror, 1071. The first fairs originated in wakes, when the number of people assembled brought together a variety of traders annually on these days. From these holidays they were called Ferie or Fairs. Gregory VII. patronised them as monks' festivals, to which the people resorted with wares to sell. Beaucaire, Falaise, and Leipsic, are noted on the continent.

FAMILIES, Agricultural, in Great Britain: while the total number of families in Great Britain increased, between 1811 and 1831, from 2,544,215 to 3,414,175, or at the rate of 34 per cent., the number of families employed in agriculture increased only from 895,998 to 961,134, or at the rate of 7½ per cent. From a table designed to show the progress of agriculture in England during each of the 75 years between 1760 and 1835, it appeared that in the ten years from 1760 to 1769, when the average number of inhabitants of England and Wales was 6,850,000 souls, the quantity of wheat produced was more than sufficient for the home use by 1,384,561 qrs. The committee of the House of Commons, which sat in 1813, stated in their report, that through the improvements in cultivation, the produce had been increased one-fourth during the then preceding ten years.

FIRES occasioned by servants, made punishable, 1707. Method to

prevent the spread of, invented by David Hartley, 1764.

FIRST FRUITS and Tenth, instituted by Clement V., 1306; first collected in England, 1316; given to Henry VIII., 1534; office of, established, 1543; granted to the poor clergy by Queen Anne, Feb. 1703-4; consolidation of, with Queen Anne's bounty, 1 Vic., 1838.

FIRST FRUITS of livings, these were to be paid strictly over by a statute of Elizabeth, being one year's income of each, which in money value had been greatly augmented; the sums received were to augment poor livings; the payments in place of being made as required one year's existing income, are made in the ancient nominal value of the money! In 1835, in consequence, only the following should be, and were, the sums paid:—

Archbishop of Canterbury	£19,182	£2,682
Archbishop of York	12,629	1,449
Bishop of Carlisle...	2,213	478

and thus all in inferior valuations. .

FISH, a most surprising quantity taken out of a pond in Shropshire, Aug. 29, 1731.

FISH was brought to London by land carriage in 1761; and machines constructed on purpose, parliament supporting them, 1764. The fish-oil used in London, cost annually before gas came in, £300,000. There are proper officers to attend to the wholesomeness of the fish brought to Billingsgate market by water or land.

FISHMARKET, erected near the bridge, Westminster, April 2, 1749; opened, Jan. 15, 1750.

FISHERIES, regulations regarding were issued, and the towns where they were carried on legally regulated, 1542; to fish on the English coast forbidden to strangers, 1609; the Dutch paid tribute first, and then £30,000 for to be permitted to fish on the English coast, 1683; corporation of free British fisheries instituted, 1730; British company for the fisheries instituted in London, 1786; Irish fishery company formed, Dec., 1818; the "Scotch obliged the Dutch by treaty," says Wellwood, in his reply to Grotius, "to keep 81 miles from the shore in fishing, and to pay a tribute at the port of Aberdeenshire. A tower was erected for that and other purposes, and the Dutch paid the tribute even in the memory of our forefathers."

FISH, condemned as unfit for food by the proper officers of the city and port of London, for the years 1831, 1832-3, with their description and quantity, was, in the three years respectively, 138,206, 163,584, 190,748 bushels. The fish consisted of the following kinds, in the second of the above-named years, affording an idea of the enormous quantity imported, to which they bear a relative proportion :—

	Bushels.
Salmon	8,150
Turbot	207
Cod	699
Soles	24,600
Herrings	3,000
Haddocks	6,700
Mackerel	92,410
Plaice, Maids, and Skate	19,950
Salt Fish	292
Whittings	400
Brill	180
Lobsters	6,025
Crabs	980

163,593

Besides the above, there were seized in the same year,

	Bushels.
Periwinkles and Wilks	532
Muscles	15
Oysters	50
Sprats	1,200
Shrimps	17

1,814

	Kits.
Salmon (pickled)	126

Total number of fish seized and condemned in three years 492,538

Bushels of sprats and small shell fish 3,525

Kits of pickled salmon 126

The increase year after year is prodigious but not wonderful, when their fecundity is considered, thus, a flounder of 2 oz. weight contains 133,407 eggs or spawn; one of 24 oz., 1,357,403; herrings weighing

from 4 to 5½ oz., from 21,285 to 36,960; Lobsters from 14 to 36 oz., contain 21,699; mackerel 20 oz., 454,061; prawn, about 3806; shrimps from 2849 to 6807; smelts from 14,411 to 38,278; sole of 5 oz., 38,772; one of 14½ oz., 100,362; a cod produces 3,686,760; a ling, 19,248,625.

FISH, Tithe of, one of those usages which custom has established and reason repudiates. Before 1500, it was the custom for fishermen to present the Catholic clergy, when successful, with a portion of their taking of fish, out of gratitude to the virgin. After the reformation, the Protestant clergy claimed tithe of fish as a right, hence one and two guineas a year are often exacted for the boat of a poor fisherman, in lieu of tithe. Fishing companies are also made to pay tithe heavily. Sometimes, in Cornwall, tithe has been resisted *vi-et-armis*. In one case of this tax upon poverty and labour, at Lowestoft, in Norfolk, a demand of 10s. 3d. for the value of a portion of a catch of mackerel, was unsuccessfully resisted. Accounts were produced showing that such tithe had been paid 161 years before, the entries afforded no proof that the payment was other than a voluntary one. A letter written by T. Tanner, a commissary, at Norwich, to his brother John, vicar of Lowestoft, related to a dispute about the tithe of fish which arose in 1709; it stated that the case must be tried under the provisions of an act of the 2nd of Edward VI., which requires proof that the custom existed forty years before the date of the act (*i.e.* in 1509); this was insisted upon at the previous hearing. The other paper was entitled, "Thoughts on the Tythe of Fish at Lowestoft," having special reference to the mackerel fishing. The old document positively stated that the vicar "accepted what the merchants were willing to give." A paper was then read purporting to be a copy of a document in the Rolls' Court; but this was

not received as evidence because it had not been authenticated. This paper declared that, "twenty years before the 9th of Elizabeth," there was a tithe of fish then called "Christ's dole!"

FISHER, bishop of Rochester, executed, July 6, 1535.

FISWOOD, near Bolton, Lancashire, destroyed by fire, Oct. 17, 1825; the bleach-mills were valued at £30,000.

FRANCE, the country of the ancient Gauls; said to have been originally a colony of the Belgæ from Germany, settled in it 200 B. C. It was conquered by the Romans 48 B. C. The Goths, Vandals, Alans, and Suevi, and afterwards the Burgundi, divided it amongst them from A. D. 400 to 406, when the Franks, another set of German emigrants, who had settled between the Rhine and the Maine, completed the foundation of the latter kingdom under Clovis; this is the only state in Europe that could boast a perpetual succession from the conquerors of the western empire; the first king of the first race was Pharamond, who began his reign in 418, and with Clodion, Merovée, and Childeric, ruled until the reign of Clovis, but the events of that day have not been handed down. Clovis, the son of Childeric, must be regarded as the founder

of the empire in 481; he defeated the Romans at Soissons, 487; married Clotilda, daughter of Childeric, king of the Burgundians; routed the Germans, at Tolbiac near Cologne, 496; became a Christian, 496; was joined by the Armoricans of Britany, 497; the Britons took refuge in Armorica, 498, and communicating their names and manners to the people, became his subjects, 499; Clovis defeated Alaric, near Poitiers, 507; proclaimed the Salic law, 511; died, aged 45, in 511; he left four sons, who reigned at Metz, Orleans, Paris, and Soissons; the empire was once more united under Clotaire, 560; the lords of the palace of Capitularies now governed France. In 616, Clotaire II. held a species of ambulatory councils or parliaments, called *placita* or *placids*. Dagobert and Charibert divided the kingdom, the former died at Epemay, his two sons divided the empire, but the inmates of the palace possessed the real authority, of which Charles Martel became the head. Pepin overcame Thieri, and as chief or mayor of the palace, usurped the entire authority. He continued to rule under the royal name until Dagobert III., in whose reign Charles Martel escaped from his prison and made several conquests. Among his victories was that obtained over the Saracens, between Tours and Poitiers, in which the invaders lost 300,000 men, 720; in 737 he reigned without naming a new king on the death of Thieri IV.; death of Charles Martel, 741; Childeric IV., proclaimed, dethroned 750; the reckoning of time was at this period by nights, not by days as Tacitus had before noted to be the fact in Gaul. Pepin, called "The Short," defeated the Saxons 753; the Slaves, and Bavarians, 758, 767, 768; Charlemagne and Carloman succeeded Pepin, the latter died 771; Charlemagne made a treaty with the Saxons and Saracens, and

marched into Spain, where he received the homage of all the country between the Pyrenees and Ebro, 778; the duke of Gascony fighting in his rear-guard on that occasion, the chief Roland, so renowned in romance, was slain; the duchy of Bavaria reunited to the crown of France, 787; introduced the Gregorian Chant 789; patronised Aleuin 790; council of Francfort, 794; held a parliament at Aix-la-Chapelle 796; crowned emperor of the West by Leo IV., 800; associated his son Lewis in the government, 814; a great astronomer first discovered a comet, which appeared in 837; at this time a letteri, or two gallons of wheat, two of barley, a measure of wine and a lamb were valued at two sols.; in the next reign the nobility re-established, 841; the Normans ravaged France, 853; Charles Chauve, named the "very christian king," by the council of Savoniere. Pepin and Charlemagne called themselves kings by the "clemency of God," while the kings of the third race styled themselves kings "by the grace of God;" Louis VI., used the first title particularly; the Normans besieged Paris for two years, 885; Eudes routed them, 892; Paris the French capital, 906; the Normans ravage France again, 912; Rollo obtained Normandy, 905; the usage of the bow and arrow, of helmets and cuirasses, that under the first race of kings was unknown, became common under the second, and symptoms of chivalry began to appear about 980; in 987, Hugh Capet's reign introduced by Guibert, bishop of Rheims, the Arab figures of arithmetic, and the Eastern arithmetic; he introduced a clock moved by a balance or weight, 990; the first canonization for nine centuries made by the pope, of St. Udalric, 993; of the kings, princes, lords, and people, scarcely any could read or write, 994; they began to burn heretics at Orleans, 1022; Eudes, count of Champagne, killed in a duel with the duke of Lorraine

1037; the Saviour's truce established under Henry I. 1041; a prohibition of all private combats from Wednesday evening to Monday morning, out of respect to the days of the week when Christ occupied himself with the last mysteries of his life, 1040; first heresy commenced about the reality of the holy sacrament by Beranger, archdeacon of Angers, 1060; Gregory VII., issued his command establishing the right of popes to depose emperors and release subjects from their oaths of fidelity to their sovereigns 1067; Philippe I. excommunicated by the pope 1094; excommunicated again 1101; the kings of France made their chief officers authorize documents by signature, and the king's preceptors countersigned them 1067; the wars between England and France commenced, which did not terminate until the reign of Charles VII., 1113; Louis le Gros routed at Bonneville 1119; peace between Louis le Gros and Henry I., of England 1120; the quarrel between Calixtus II. and the emperor Henry V., 1120; Louis le Gros died 1137; he first sent judges into the provinces; the doctrines of Abelard condemned by the council of Sens 1140, as he had himself been at Soissons 1121; differences occur between the king and Rome; letters of franchise to towns and cities 1135; towns of Vitry and Pertois are delivered over to fire and sword, to avenge Louis le Jeune upon count Thibaud 1143; the church advised him to expiate the crime by going to a crusade, and the king obeyed 1147; the council of Rheims convened on the king's absence 1148; the king taken prisoner by the Greeks on his return, and given over to Roger king of Sicily 1149; war with England 1156; peace concluded 1169; war renewed with England, terminated 1172; Louis visited the tomb of Becket at Canterbury 1179-80; Philippe II., and Henry II., of England made peace 1189-90; the

FRANCE divided into provinces, was subdivided in 1789. There are eighty-six departments, hereafter named, 363 communal arrondissements, or sub-prefectures, 2844 cantons, and 38,339 communes; from the Pyrenees in the south to Dunkirk in the north, its extent is 625 miles, and something more from the most easterly point of Alsace to the most western point of Bretagne. The climate of France is the most happy of the temperate zone, and its agricultural riches, with a system of agriculture by no means equal to that of either Belgium or England, are very great. Besides growing corn sufficient for the supply of its inhabitants, to such an extent as to render the amount of the imports of that article for 30,000,000 of population, equal only to a few days' consumption in twenty years, the value of the product of its vines alone is equal to the sum of £22,000,000 sterling per annum, and the duties upon them pay one tenth of the national revenue. The surface of about 131,722,295 acres, may be divided into seven classes or gradations of soil, as to

fertility. The rich soils of the departments du Nord, the Pas de Calais, the Somme, Aisne, Oise, Seine Inferieure, in all fifteen departments, including some as far south as the Herault, form the first class; the second consists of more arid, but tolerably good, land; the third of chalk; the fourth of gravel; the fifth of stony land; the sixth of mountain; and the seventh of sand. All the territory of France has been surveyed and valued, with a view to equal taxation, by an operation called the "cadastre." In France, corn and olives, the mulberry and the vine, hemp, maize and tobacco, come to perfection, north or south, as the climate for each is found suited by nature. Among the consequences of climate is the production of excellent wines and oils. The product of the former alone, has, at the lowest valuation, been given at 35,075,689 hectolitres of wine, of the value of 540,389,289 francs; of brandy from the vine 821,960 hectolitres of twenty-two imperial gallons each, 1830; the silk manufacture introduced by Louis XI., 1470, produces 3,000,000 pounds of raw silk annually, after the estimate of 1832; the mulberry trees amount to 7,000,000 in number, for feeding the silk worm. The forests cover a large territory, not less than 7,000,000 of hectares. The wild animals of France are the wolf, the bear, the fox, and the wild cat (the tame are those of England and the surrounding countries.) Game is abundant, and the rivers teem with the finny tribe. Coal is found in abundance in the north, and iron furnaces are numerous. The mountains form portions of the great chain that divides Europe. The chain of the Jura, north, is connected by the Vosges, near Stralsburgh, and by other branches with the Monts d'Or, the Cevennes, and the Pyrenees. The climate in the south is very hot during three of the warm months, and the summer is greatly prolonged, the sky

serene, and the winter mild. In the north, the winters are long and cold, and the summers short and warm. The finest district of France lies along the Loire, continually between the two extremes, having the moderate temperature of the north, and the serene sky of the south, as Touraine, and the departments of the Indre et Loire, the Maine et Loire, and the Loiret. The principal rivers are the Seine, Loire, Rhone, and Gironde, and there are many others, which give name to the departments in the new division of the country. France was divided into several military governments or provinces, namely, Alsace, Angoumois, Anjou, Armagnac, Artois, Aunis, Avergne, Barrois, Basques, Bearn, Berry, Bigorre, Blaisois, Boulonois, Bourbonnois, Bresse, Bretagne, Burgundy, Cambresis, Champagne, Conserans, Dauphiny, Forez, Foix, Franche Comté, French Flanders, Gascony, Gevaudan, Guionne, French Hainault, Isle of France, Languedoc, Limosin, Lorrain, Lyonnais, March, Maine, Marsan, Navarre, Nivernois, Normandy, Orleanois, Perche, Perigord, Picardy, Poitou, Provence, Quercy, Ronergue, Rousillon, Saintonge, Soissonois, Touraine, Velay, and Vermandois. These varied much from each other in point of extent and importance: and there were others of inferior consideration. The established religion was the Roman Catholic; and the ecclesiastical division of the country was into 18 archbishoprics and 131 episcopal sees, exclusive of Avignon, Carpentras, Cavaillon, and Vaison, which belonged to the pope. But in 1789 a revolution took place, and the departmental division was adopted. The population was 35,000,000 in 1840, though but 25,000,000 in 1789. The French were computed to be 28,000,000 in 1830; the Germans, 3,068,000; the Bas Bretons, 900,000; the Italians, 200,000; the English, 100,000; the Basques and others, 208,000.

The Catholics were reckoned at 28,400,000; Calvinists, 3,300,540; Lutherans, 1,100,000; Jews, 64,000; Quakers, 2000; Moravians, 2000, 1830.

France was then ruled by a convention, directory, and consulship; the last under Bonaparte, who assumed the title of Emperor of the French, May 18, 1804; abdicated, April 5, 1814, and retired to Elba; and the Bourbon race replaced by the allied armies; returned to France, March 1, 1815; vanquished at Waterloo, and throwing himself into the hands of the English, he was made a prisoner of, and transported to St. Helena, where he died, May 5, 1821; the Bourbons were again replaced in the person of Louis XVIII., such being the title assumed, though the Dauphin had died in prison at the age of eleven, nineteen years before, never having reigned! Louis XVIII., the brother of Louis XVI., died, Sept. 16, 1824; Charles X., born, Oct. 9, 1757, brother of Louis XVIII.; expelled France, July 30, 1830; died, Nov. 6, 1836, at Gatz; Louis Philippe, Duke of Orleans, raised to the throne, Aug. 9, 1830; deposed, Feb. 24, 1848; died in England, Aug. 26, 1850. France remained a republic under a provisional government, from Feb. 22 to Dec. 11, 1840, when Prince Louis Napoleon, son of the former king of Holland, was elected president of the republic, Dec. 11, 1848, by 6,041,872 votes out of 8,040,604 given over his rival, General Cavaignac, and proclaimed, Dec. 20, 1848; elected emperor by a majority of 7,119,795 for, to 111,900 against him; proclaimed emperor, Dec. 2, 1852. Exports, those from England to France were of the "declared value," in 1848, of £1,025,121; in 1850, £1,951,269; in 1850, £2,401,956; in 1851, £2,028,463.

During the same years the "official value" of the imports of France was £7,130,394, £8,177,075, £8,454,193, and £8,083,112, in the respective years. The duties levied on French imports in 1851 amounted to £2,110,968.

It began on Christmas-day, 1739, all over the north of Europe. People were frozen to death in the fields and on the Thames, and ships sunk; Lough Neagh, in Ireland, was frozen over; more than £3000 damage was done to London bridge alone; it lasted 103 days, and the Thames became a scene of diversions, carriages travelling over it; 1742, a frost again of great severity; 1747, one in Russia dreadfully severe; 1754 in England, and 1760 in Germany, severe; 1763, one in England, which lasted ninety-four days; 1766, one from Dec. 25 to Jan. 16, and from Jan. 18 to 22, remarkably severe; 1779, one of eighty-four days' duration; in 1783-4, one of eighty-nine days;

and 1784-5, the longest known, being 115 days, or twelve more than the "great frost" of 1740, but the thermometer did not descend so low; in 1788-9, from Nov. to Jan., when the Thames was frozen over opposite the Custom-house and Tower, as well as upwards; it was general throughout Europe; 1795 6, one of the most severe known in human memory; 1814, when the Thames was frozen between the bridges, and booths erected upon it. On the Tyne the ice was twenty inches thick; at Quebec, Canada, a severe frost occurred on Aug. 7, 1815.

Frost in France. In 358 the Emperor Julian, who passed his winters at Lutetia (the old name of Paris), complained that the Seine was frozen over. The winters of 763 and 801 were remarkable for their severity. In 822 carts passed freely across the Seine for several months together. In 1067, 1210, 1305, 1354, 1408, and 1420, the Parisians had very severe winters, and in 1408 the soldiers' rations of wine were cut with an axe. In 1433 the frost set in on the last day of the year, and lasted three months. The winters of 1460, 1480, 1493, 1508, and 1522 are recorded as excessively cold. In 1544 wine was cut with an axe throughout France, in the casks. The winters of 1621 and 1622 were felt even in Italy. In 1622 and 1633 the frost continued in Paris from Dec. 5 to March 8. In 1695 there were twenty-one degrees of cold (centigrade.) In 1676 and 1677 the Seine was frozen over for thirty-five days consecutively. It was only about the beginning of the eighteenth century that the thermometrical observations were noted down:—The thermometer descended, in

The degree of cold on Dec. 15, the day on which the Emperor Napoleon's remains entered Paris. The average cold of a great number of years at Paris, is about ten or eleven degrees centigrade above zero. At nine degrees centigrade the Seine freezes. The severest cold hitherto known at Paris was in 1795, when the thermometer fell to 23 5-10.

Frost, in Russia, 1812, setting in a fortnight before its accustomed time, with unusual severity, destroyed the veteran French army that had set out on its retreat from Moscow, Nov. 9; whole battalions and thousands of horses perished, 300,000 men being frozen to death,* or made prisoners in a state of irrecoverable injury.

Fruits and Flowers, of which few were indigénous, have been brought into England from other countries, for the most part as relates to the better kinds, since 1500; and many have been acclimated by art that are native to very different temperatures: thus, the Syrian apple came in about 1522; the red mulberry, from North America, about 1600; the black walnut from North America, about 1620; the Cornelian cherry, from Austria, 1596; the

precise dates of their importation are now with difficulty to be recognised, but the pine-apple came in from torrid America in 1568; and the mango has been introduced from India during the present century. The acacia was introduced from America, 1630; the auricula from Switzerland, 1567; the dahlia from South America, 1803; the geranium from Spain and the Cape of Good Hope, also the Cape Heath, 1800, and other varieties; the *Erica vagrans* is indigenous in Cornwall, also the *Erica ciliaris*; the magnolia, from North America, 1688; the passion flower from America, 1790; the musk rose, from Italy, 1522; sweet bay, Europe, date unknown; the camellia from the east, supposed China, in the present century; mignonette came from Italy, 1528.

FAYTH, John, burnt in Smithfield, July 4, 1533.

FULHAM Bridge, built 1727; the act passed May 24, 1726.

FULLER, one, gave evidence of a pretended and spurious Prince of Wales; voted an impostor, Jan. 16, 1692; fined £1000, June 23, 1702.

FUNDS, introduced into England at the revolution of 1688; subsequently distinguished by different titles, according to the interest paid; the three per cents. annuity were created 1726; the three per cents. consols, 1731; three per cent. reduced, 1746; three and half per cent. annuities, 1758; long annuities, 1761; four per cents., 1762; five per cents., 1797, 1802; the short annuities expired in Jan., 1808; July 5, 1787, an act passed to set aside £250,000 quarterly for a sinking fund, £200,000 more was subsequently added; May 10, 1787, it was enacted that all monies reserved to pay annuities and not claimed for three years prior to Jan. 5, 1787, should be set apart for the commissioners for the reduction of the national debt; by 48 George III., annuities are made purchasable by the transfer of stocks; an augmen-

tation shall be added to the sinking fund of one per cent. in all future loans, 1792; in 1813 further reductions were made, and the reduction of the debt proposed in forty-four years from that date; the delusion was for some time continued or concealed, or affectedly not admitted, that unless there was a surplus revenue equal to the sum set by for the fund, it was a complicated scheme without any advantage at all, it being only taking money with the left hand to pay it away with the right, and accordingly the surplus of the revenue of the nation alone is since applied to the redemption of the debt.

FUNDS, Fluctuations in, from 1730 till the rebellion of 1745, the three per cents. never under eighty-nine, and once, in 1737, as high as 107. During the rebellion they sank to seventy-six; in 1749 rose to 100; between the peace of Paris in 1763 and the breaking out of the American war, they averaged from eighty to ninety; towards the close of the war sunk to fifty-four. In 1792 they were at one time as high as ninety-six, but within five years, in 1797, fell to the low price of 44½, the consequence of the success of the French, the mutiny at the Nore, and the general distress. The highest price of consols in 1797 was fifty-six. On the conclusion of the peace of Amiens, they advanced to seventy-nine; hostilities commencing, they again sunk to fifty in 1803. In 1806 they reached sixty-six, in 1808 were at seventy, and in 1810 at seventy-two. The American war, in 1812, brought them down to fifty-five; and though seventy-three on the abdication of Bonaparte, in 1814, they were at fifty-five on his escaping from Elba, in 1815. The battle of Waterloo caused an immediate reaction, and in the year 1817 they rose to eighty-four. At the period of the queen's trial, in 1820, consols sank to sixty-five, but in 1824 ascended to ninety-seven. The panic of 1825 brought them to

seventy-four; but with the exception of another sudden fall, in consequence of distress in 1831, of very slight duration, the funds continued to advance to par, an event that had not occurred before for a century.

FUNERALS, a tax laid on them in England, 1793.

GARRICK, David, the English Roscius, born at Hereford, 1716, died Jan. 20, 1779, aged sixty-two years and ten months; first appeared on the London stage in 1741.

GARTER, Order of, established by Edward III., April 23, 1349; alteration in, 1557 and 1788. It is remarkable, that this is the only order that has been granted to foreign princes. Of this order there have been:—

Eight emperors of Germany.

One emperor of Russia.

Five kings of France.

Three kings of Spain.

One king of Arragon.

Seven kings of Portugal.

One king of Poland.

Two kings of Sweden.

Six kings of Denmark.

Two kings of Naples.

One king of Sicily and Jerusalem.

One king of Bohemia.

Two kings of Scotland.

Five princes of Orange,

And thirty-four foreign electors, dukes, margraves, and counts. The first knight was Edward, the Black Prince, who had just before restored Don Pedro in Castile: to the prince were added twenty-four other knights from among the English nobility.

GARTER King-at-arms, appointed by Henry V., 1420; the order established by Edward IV. in Ireland, 1466; was abolished by Henry VII., 1494.

Gascony, recovered by England, 1253; revolted to France, 1374; returned to the English, 1452.

Gas, exhibited from coal, 1739; first tried in Cornwall, 1792, by a Mr. Murdoch; Boulton and Watt's factory at Birmingham lit up, 1802; first used in London, in Pall-Mall, 1809; length in 1823 of streets lighted, 213 miles, and 39,504 public lamps; of pipes in London 1100 miles were said to be lighted in 1850; works of the company in Dorset-street, destroyed by fire, May 24, 1815. London has eighteen public gas-works, twelve public

gas companies; £2,800,000 capital employed in the apparatus; £450,000 yearly revenue; 180,000 tons of coals used in the year for making gas; 1,460,000,000 cubic feet of gas made; 30,400 public or street consumers, about 2650 of these are in the city of London. GERMANY, events relating to, anciently divided into independent states; the Huns then conquered a portion of it; united under Charlemagne in 802, he adopted the double-headed eagle for his symbol of empire. The name of Allemannia, from Alleman, or the German

for "every man," was the name of the country at this time; Louis le Debonnaire held France with Germany, but his son Lothaire was restricted to Germany; the dukes being governors of provinces grew in time into the sovereigns of petty states. Of these Saxony, which was resigned by Otho III. to the house of Billing, 936, ultimately became a kingdom. The first emperor who possessed power over the whole of the states was Conrad I., elected emperor, 912; he is deemed the first emperor of Germany freely chosen, but we have no authentic account of the electors of the empire till 1273, when Rodolph of Hapsburgh was chosen emperor by the seven electors, after an interregnum of two years. The electors, according to some, reduced to seven in 999. The assembly general of the states took place at Aix-la-Chapelle, 1001, when Otho opened the tomb of Charlemagne, and took away the gold cross he wore, the crown, sceptre, sword, and part of the dead emperor's garments. He was poisoned, 1002; the diet of Aix-la-Chapelle, held 1007. To bring in their sons successors, the emperors, in their lifetime, politically got them elected kings of the Romans, which was a part of the sovereignty; the first emperor so-elected, 1054. The elective power originated by the emperors getting their last will, wherein they nominated their successors, confirmed before their deaths by the princes and great men. The emperor Philip murdered, 1208. Seven electors first appointed to choose an emperor, 1258. Louis V. made the empire independent of the holy see, Aug. 8, 1338. Golden bulls relating to the election of the emperors established by Charles IV. of Germany, 1356. To get his son elected king of the Romans, Charles IV. gave each elector 100,000 ducats, and was forced to mortgage several cities to raise the money, 1376; the descendants of the mort-

gages continue still in the possession of them. Under Henry III. the country flourished very much, the emperor protecting learning, and being remarkable for his sense of justice; his son was only six years old when he died, 1056; the states of Saxony revolted, 1073; the Saxons defeated, 1075; Rome besieged by Henry IV., 1081; diet of Mayence, 1097; Henry V. defeated the troops of the sovereign his father, and deposed the latter, who died at Liege, whence his body was afterwards conveyed to Spire, and there interred, 1111; great disputes arose regarding the investiture of ecclesiastics, and the right of the Roman sovereigns to nominate to bishoprics, which caused disputes and disunion in Germany for three centuries; Hungary attacked, 1108; Henry V. concluded an alliance with England against France, 1123; in the midst of great designs he died at Utrecht without issue, 1125; the diet of Ratisbonne, held, 1123; Franconia conquered, 1128; Lothaire visited Rome in memory of which the people had a picture of the emperor painted in the Vatican prostrated before him, 1133; at his death the emperors of the house of Franconia ceased; Conrad III., emperor of the house of Swabia, succeeded him, 1138; in this reign began the troubles between the Guelphs and Ghibelines, 1140; in 1143 the archbishop of Mayence ordered the trial by burning iron to be adopted in criminal proceedings; the diet of Spire took place, 1122; Conrad III. set out for the Crusades in 1147, first convoking the German states at Frankfort, to elect his son in law, Henry, king of the Romans; in Asia, lost most of his troops by the perfidy of his guides; on his return was poisoned by the king of Sicily, 1152; Frederick I. captured and destroyed Milan, 1162, and fearfully ravaged the Milanese, died 1190; the next sovereign was poisoned by his em-

press, Constance, 1197; under Philip, 1197, the order of the knights called Porteglaives was established in this reign to support the bishops of Riga, in converting the Livonians; this prince was assassinated, 1208; Otho IV. broke with the Pope; a diet convoked, 1212; lost the battle of Bouvines, soon resigned the crown, and, entering the fortress of Hartzburg, died there, 1218; in this reign the authority of the states made a great advance in power. In the next reign, 1216, was held the diet of Wurtzburg, which declared that the emperor could not alienate any of the estates of his crown, or add them to the domains of any prince of the empire; the diet of Frankfort held, 1220; the emperor crowned at Rome by Honorius III., and his son soon after made king of the Romans, the first son of a reigning emperor in his father's life time so named; crowned at Aix-la-Chapelle as Henry III.; Milan revolted, 1228. The emperor proceeded to the Crusades, was victorious, granted the Saracens a truce for 10 years; anathematised by Gregory IX. for making peace with infidels, 1230; Henry VII. revolted against the emperor his father, 1235, who forgave him, but on a second offence, imprisoned him, his days ending in his confinement, his brother being made king of the Romans, 1256; the emperor held a diet of princes at Verona, 1245; the Pope declared the emperor deposed, and insolently affected to give his crown to another, 1246; the princes denied such a right to the pontiff in vain; Frederick II. died in a monk's habit, 1250; his son, the object of popular hatred, was poisoned, 1254, by a natural brother; the next brother, William Count of Holland, killed in an ambush, 1256; an interregnum of two years; Richard, Duke of Cornwall, elected sovereign of Germany, Jan. 13, 1257; upon Richard's death an interregnum of two years ensued, and the house of Hapsburgh became

sovereigns in the person of Rodolph I., Sept. 30, 1273; he declared war against Baden and Wurtemberg, 1276; and vanquished Ottocar and the Bohemians in battle; the diet of Nuremberg held, 1280; secured the consent of the electors of the empire that the Austrian succession should be in his family; a vast number of castles and fortified houses were destroyed by Rodolph in Germany, the refuges of robbers and nobles, 1284; the estates of Upper Silesia brought under the empire, 1290; diet of Frankfort held, 1291; Rodolph died, 1291; Adolph of Nassau succeeded, June 25, 1292; allied himself with Edward I. of England against France, 1294, by a treaty concluded at Westminster, being to receive 100,000 silver marks of Edward, by a secret clause in the treaty as a military subsidy; he was killed in battle, near Worms, 1291; Diet of Cologne, 1292; the reign of Albert I., 1298; the aim of this monarch was aggrandisement, he endeavoured to get the cantons of Uri, and Schweitz to acknowledge his authority, 1309; they preferred their liberty and refused; he excited a revolt, and marching to attack the Swiss, was assassinated, 1309; Henry VII., his successor confirmed the privileges of the Swiss cantons at Constance; the knights templars were extinguished in this reign; the emperor died at Buonon Convento, 1313, and was succeeded by Louis V.; civil war commenced in 1315, between Louis and the dukes of Bavaria; a battle fought near Esslingen, sanguinary but undecisive, 1317; the Ghibeline faction submitted to Louis, 1319; Germany desolated with war and rapine, the emperor forbidding secular disputes being referred to the pope; Frederick the Handsome, who invaded Bohemia, defeated and made prisoner by Louis, 1322; Diet of Nuremberg, 1323; the pope intrigued to get the Electors of Mayence and Cologne to depose

Louis V.; a national synod assembled at Spire, 1338; the diet of Frankfort met the same year, before which the emperor laid his affairs; interview at Coblenz between the emperor and Edward king of England, 1338; the diet at Frankfort, 1339, ratified anew the Pragmatic sanction of 1338; the pope prevented the emperor from joining the army of Edward king of England, before Cambray; commenced his alliance with Edward, 1339; civil war between Louis V., and the king of Bohemia, 1347; the form of the Germanic constitution developed itself more and more this reign and strengthened itself by the laws; Charles of Luxembourg came to the throne, 1343; letters patent were given to John duke of Brabant, by Charles, to prohibit the courts of justice of Germany, except in cases of the denial of justice, to cite before them the subjects of Brabant, but to remit the causes to the proper judges of the duke; in the extension of which edict, two unforeseen cases gave room for great complaint down to the eighteenth century, until "to reform the abuses of the Golden Bull of Brabant," became a proverb; the Jews began to be fearfully persecuted in Germany, 1348; Diet of Mayence, 1354; the county of Luxembourg made a duchy, 1354; the laws and rights of Bohemia affirmed, 1355; diet at Nuremberg, 1356; Mayence, Spire, and Worms declared imperial free towns, 1356; Diet at Mayence, 1357; the carriages of the emperor seized by the butchers of Worms for a debt he could not discharge, and at another time he was obliged to remain personal security for a debt he had no means of discharging, 1378; Charles, the first sovereign that issued letters of nobility; Charles succeeded by Wenceslas, 1378; dethroned in 1400; died 1419; he had renounced the crown in favour of his brother Sigismund, 1411; Robert succeeded in 1400; died 1410, and Sigismund

became emperor, Nov. 8, 1414; he died in Moravia, Dec. 9, 1437; gave a personal security to all who attended the council of Constance, on the faith of which, John Huss attended there with a written security, and several deputies of Bohemia, whom he ordered to watch over the safety of Huss, but still Huss was arrested soon after his arrival, and sent to the prison of the Dominicans; Jerome of Prague, the friend of Huss, was condemned to be burned as well as Huss, whom the emperor had thus betrayed; Bohemia outraged by the conduct of Sigismund, 1419; he went to besiege Prague with 100,000 men; forced to raise the siege and retire into Moravia, soon after the Hussites beat the royal troops in the battle of Tentehbroda; diet of Nuremberg, 1426; failure to subdue the insurrection, 1429; the civil war still raged, 1437; the emperor expired, Nov. 9, 1437; Albert II. succeeding, the crown remained in his family for six centuries, 1438; the states assembled at Mayence, 1439; Albert II. died, Oct. 27, 1439; a diet at Mayence, 1441; Frederick IV. crowned in Italy, 1450; the duchy of Austria made an arch-duchy, 1453; diet of Ratisbonne, 1470; interview between the emperor and the duke of Burgundy 1473; duke of Burgundy attacked the Swiss, and shamefully beaten at Morat and Granson, 1476; the king of Bohemia excommunicated by the pope as a favourer of the Hussites, 1477; the king of Hungary takes the capital of Austria, the emperor flying to Lintz, 1483-4; the emperor died 1493; the reign of Maximilian I., 1493; the celebrated diet of Worms, 1495; diet of Lindau, 1496-7; war with the Swiss, 1499; truce with France, 1501-2; diet of Treves, 1512; the empire divided into circles, 1512; the emperor and kings of Poland, Hungary and Bohemia, meet at Vienna, 1515; diet of Augsburg, 1518, where Luther presented himself, and the

GERMANY, a part of the ancient Roman empire, which terminated about 475, in the person of Augustulus, the last Roman emperor; then a reign of the Huns and Ostrogoths succeeded. The different states cover a large superficies, 600 miles long by 500 broad, divided into a number of petty sovereignties, but resting upon the potent monarchies of Austria and Prussia as their leaders. The religious creeds are various. Before 1798 it contained 6 archbishoprics and 38 bishoprics, which were then secularised; the archbishop of Regensburg is metropolitan of all Germany. In 1801, by the treaty of Luneville, portions of the Upper and Lower Rhine and Westphalia, on the left bank of the Rhine, were annexed to France; Germany ceased to be united as an empire in 1806; the government settled at the congress of Vienna, 1815, gave the different states the name of the "Germanic Confederation," with 17 votes in the diet; but when any fundamental laws are to be enacted the diet forms itself into a general assembly of 69 votes, according to the extent of the different states, in which two-thirds, or

46 votes are necessary to carry any such a measure; the diet sat at Frankfort, and Austria had the presidency, 1815. Of the German states north of the Maine, Saxony, first governed by dukes, was given, in 1180, the eastern part to Bernard of Ascania, the western to the Archbishop of Cologne. The house of Ascania ended 1422; the territory was then divided between Ernest and Albert, 1485; one branch ceased to rule, 1547; increased in extent by Napoleon, the kingdom was reduced, in 1815, to Upper Lusatia, Misnia, and Voigtland. Hanover was secured to the electoral house of Brandenburg, 1648; George Lewis, the first elector, 1698, who, in 1714, became King of England. Hesse, Mecklenburgh, Brunswick, and the cities of the Hanseatic league, lie north of the Maine. The electoral family of Brunswick sprung up about 1463, from Magnus the Pious. Hamburg, at the head of the Hanseatic league, with Lubeck and Bremen, were united in 1241 in the league; the league lost its power as Holland and England rose in commerce, about 1630. Bavaria, the palatinate, Wurtemberg, Anspach, Salzua, and some smaller states, are south of the Maine. Bavaria was ruled by electors, and the Lutheran religion established in the territory, 1556; it had been a state from 925; the catholic religion became predominant there, 1685; it was made a kingdom by Napoleon. In 1071, Welf was duke; in 1138 it passed to Austria; in 1154, it returned to the house of Welf; of this family were the emperor Lewis, 1314, and Charles VII., 1740. In Salzua, or Salzburgh, the see was founded by St. Rupert, an Englishman, 716; the other and smaller states are of slight attraction in historical events out of their own limits.

GLENCOE, massacre of the Macdonalds, under the pretence of not surrendering to king William's proclamation; thirty-eight unoffending men were murdered, and their wives and children turned out in a freezing night, to perish of cold and hunger; the Earl of Argyle's regiment committed these assassinations March 9, 1691.

GLOBE, or sphere, as a term used for the earth's form, first stated by Thales, 640 A. C., as well as by Pythagoras, 506 A. C. The first ship that sailed round the earth was that of Magellan, 1520, who died before he reached home, the survivors demonstrated the fact; Sir Francis Drake completed his voyage of circumnavigation, 1577; and others quickly followed. There have been various estimates of the number of the human species that inhabit the globe, such estimates are purely conjectural. A late publication makes the number of inhabitants to be about 896,000,000. Of these 226,000,000 are Christians, 3,500,000 Jews; 210,000,000 Mahometans, 450,000,000 Pagans. Of those professing the Christian religion there are 50,000,000 of Protestants, 30,000,000 of the Greek and Armenian churches, and 90,000,000 of Catholics. If we reckon with the

ancients, that a generation lasts thirty years, in that space of time 896,000,000 human beings will be born and die; consequently 81,760 must be dropping into eternity every day; 3497 every hour, or about thirty-six every minute.

GLOBE of fire passed over the Island of Funen, in Denmark, in open day, Sept. 1807. A similar phenomenon observed the same time at Jutland.

GLOBES, Artificial, one in the royal library in Paris, is of a large size; at Cambridge is one of 18 feet diameter, and at Gottorp, one of eleven feet; the last made at the expense of the Duke of Holstein, Frederick III., was under the direction of Olearius, planned after a design of Tycho Brahe, discovered among his papers, it was presented to Peter the Great of Russia, 1713; nearly destroyed by fire, 1757; it was reconstructed. A globe of very large dimensions was erected in the centre of Leicester Square, by Mr. Wyld, the hydrographer, so large as to admit a numerous body of spectators within side it, 1851.

GLORIA Patri, the doxology of, first used 382; called doxology because it began with "doxa," glory.

GLOUCESTER, City of, built, some assert by Aviragus, 47, in honour of Claudius, the Roman emperor, who married his daughter; monastery founded, 910; cathedral built, 1220 to 1460; Saxon, 432 feet long, 84; tower built, 1460, 225 feet high; burned, 1120; incorporated by Henry III.; bishopric founded, 1541; and united to Bristol, 1836; the city besieged by Prince Rupert, Aug 5, 1643; the garrison skirmished with the king's troops on the 7th, Charles came in person on the 10th, with 6000 horse, and summoned the inhabitants "out of his tender compassion to them." The inhabitants replied that they should "obey his Majesty's commands as signified by both houses of parliament." The siege commenced, Aug. 11, and the king's

artillery opened upon the city, but the garrison returned blow for blow; the siege continued to Aug. 26, 27, and 28, when the royalists proceeded to mine the east gate, but the springs spoiled their operations; Sept. 1 to the 5th the siege also continued. On Sept. 12, 1643, the garrison set out to harass the retreating forces of the king, and took some of his stores. On the restoration of Charles II. he demolished the city walls, 1660, in requital for the resistance the town made to his father; new bridge began, 1814; the Gloucester and Berkeley Canal opened, April 1827.

GLOUCESTER, Duke of, smothered between two feather beds at Culais, Sept. 28, 1397, by Richard II.

GLOUCESTER, Duchess of, punished for a witch, 1442.

GLOUCESTER, Humphrey, Duke of, fourth son of Henry IV., murdered at St. Edmundsbury, and buried at St. Albans, 1447.

GLOUCESTER, Richard, Duke of, and brother of Edward IV., appointed protector, 1483; murdered his nephews, Edward, prince of Wales, and Richard, duke of York, 1483.

GONSTOW Nunnery, Oxfordshire, consecrated, 1138.

GODWIN'S Oath, a phrase for perjury, after Earl Godwin, brother of Edward the Confessor, who was tried for the murder of Prince Alfred and pardoned, hoping the bread he was eating might stick in his throat if he were guilty; it did stick, and he was choked, 1053.

GODWIN SANDS, off the coast of Kent, once part of the estate of Earl Godwin of Kent, which was overwhelmed by an inundation after it had been given to the see of Canterbury, owing to the dykes being neglected, the sea covering it, reduced the whole to the perilous sands so fatal to mariners, 1100.

GOLD, the scarcest and most pure of metallic bodies, possessed of the most gravity and ductility; it was found in many parts of the world, but only in small quantities, until the middle of the 19th century, when it was discovered in California and in Australia in great plenty. In coinage it is usually alloyed with silver or copper; it was first coined in England, 1257; at Venice, 1276; in 1344 gold pieces were struck by Edward III. The gold florin was coined, 1354; the standard of value was altered, 1546, from 40s. to 48s. per oz.; the gold coinage was called in by proclamations, and recoinied, 1695; *temp.* William III. See coinage. The standard is 22 parts gold to 2 of copper; gold lowered in value, Dec. 22, 1717; mines of gold discovered in America by the Spaniards, 1492, but not in proportion to the mass of silver; of both it is assumed that 600,000,000 pieces of eight were thus brought to Europe; gold was found in the Moluccas, Oct. 27, 1731; in New Andalusia, 1785; in Cornwall; in Ireland, at

Wicklow, in 1795; in Ceylon, 1800; in Russia, 1809; the standard was farther reduced, Aug. 1776, in Great Britain; the value per oz. £3:17:10½.

The total products have been estimated for Northern Greece and Peloponnesus, at 60,415,880 piastres in value of five to the Spanish dollar; the population to 548,940.

GREEK Church, the separation from that of Rome occurred about 750, from differences that were discussing for 250 years previously; it claimed precedence to the Roman for its ritual which was that of the gospels originally; it refused to acknowledge the papal supremacy and the Roman use of images, and with many resemblances in forms and much superstition, was still less artificial and changeable in the introduction of novelties than that of Rome. The Russian church was Greek as early as 981.

GREEK Language, the ancient, well known to scholars, began to be studied in England, 1491; the modern Greek is also called Romaic; so little changed since Homer, 915 years before Christ, that this poet

is readily understood by the modern inhabitant of Greece.

GREEN, Saxon colour, so called, invented 1744.

GREEN Dye for cotton, invented by Dr. Williams, 1777.

GREENFIELD Monastery, built, 1131.

GREEN Bag, certain inquiries into documents declared to be seditious by the minister when he desired to suspend the Habeas Corpus, and obtain the power of an unquestioned imprisonment of the subject; introduced by Addington Lord Sidmouth, Feb. 2, 1817; secretly reported upon, two days after, and the bill brought in to suspend the liberty of the subject, Feb. 21, 1817.

GRENADES, a small shell with a fusce to be thrown by hand, among the besieged, on entering a breach, or in similar circumstances; invented in 1594; whence the name of Grenadiers who bore them, who were a company of the tallest men in the regiment; first adopted in France, 1667; in England, 1685.

GRENVILLE Administration, or that of the Hon. George Grenville, 1763; the stamp act imposed at the suggestion of George III., by that minister, cost the British crown its North American colonies. The Grenville administration of the noble peer of that name lasted from Feb. 6 to Sept. 13, 1806, when Mr. Fox died, and the ministry being

favourable to the repeal of the test and corporation acts and catholic emancipation, was on that account dismissed by George III. in March, 1807.

GRENELLE, near Paris, powder mills at, blown up, and nearly 3000 persons and all the buildings in the vicinity destroyed, Sept. 3, 1794.

GRESHAM College, founded and endowed by Sir Thomas Gresham, 1579; the buildings of the college were let by the London Corporation for an excise office, at £500 per annum ground-rent, 1771-1774, and since that time the lectures were little more than a form, sometimes read in one place and sometimes in another. At length a building called Gresham College, was erected at the corner of Basinghall-street, in 1843, at a cost of fourteen years' rent of the old college, while Sir Thomas had endowed his college with all the profits and rents of his exchange; it is now little more than a lecture and reading room.

GRETHAM Hospital, Durham, built, 1220.

GREYNA Green, a parish called Graitney, just "over the border" in Scotland, where marriages are performed, according to the law of the country visited, to evade the stringency of the law of England by fugitive couples. The ceremony here is binding, performed by a layman, in the simplest form, when being registered, and the parties declared man and wife in the presence of witnesses, the chain is riveted; one Paisley, a tobacconist, who died, 1814, officiated commonly up to that year, and since then one Elliot, said to be a smith. Attempts have been made, unsuccessfully, to set aside the Scotch law, the last in 1826.

HARDICANUTE the Dane, king of England, 1039.

HARDY, Tooke, Thelwall, and others tried at the instigation of the Pitt ministry for high treason, though a measure opposed by Lord Eldon, then Mr. Scott, who foresaw that a verdict of guilty would be monstrous for what was but a misdemeanour—he was overruled; the ministry had prepared a list of others to be arrested on the same charge, had a verdict of guilty been sustained; Hardy was first put to the bar, having been kept in custody from May 20 to Oct. 29, 1794; after a trial of eight days he was honourably acquitted, principally through the exertions of Erskine and Gibbs, his counsel; Tooke was tried and acquitted, Nov. 20; still in hope of a verdict, Thelwall was tried and acquitted also, Dec. 8; the government, in despair, then discharged all the prisoners involved in the accusation; it was thus that jurors felt their full power, and exhibited

less of that subservience to crown prosecutions, which had before too much distinguished them.

HARDY, Thomas, secretary of the corresponding society; lived to see the reform bill pass, when he exclaimed, "Just heaven, that is now the law of England, for supporting which the government tried its utmost power to hang and dismember me." He died 1832, and was buried in Bunhill Fields, with a monument bearing this inscription:

PUBLIC DUTY AND PRIVATE WORTH.

To the Memory of

THOMAS HARDY,

Born March 3, 1751,

Died October 11, 1832,

in the 82 year of his age.

He was a plain and upright Man; a steady and inflexible Patriot;

One of the three who, in 1792, commenced the formation of the celebrated London Corresponding Society, for the promotion of a Radical Reform in the Commons' House of Parliament.

He was appointed Secretary to that Society in the same year, and filled the office, with diligence and ability, until his arrest in May, 1794, on a charge of High Treason, when he was committed to the Tower, separated from his wife and family for six months,

subjected to a nine days' trial at the Old Bailey,

and triumphantly acquitted by an honest and independent jury, on the fifth of November, 1794; by which event

the corrupt and sanguinary Ministry of Mr. Pitt

was defeated;

and a brighter era commenced in the political condition of this country.

HESS-**CASSEL** and France sign a treaty of peace, Sept. 1795.

HESS, Prince of, chosen king of Sweden, March 24, 1720; married the princess *Mary*, May 8, 1740; arrived in Scotland to suppress the rebellion Feb. 8, 1745; arrived in London, June 2; returned with his troops to Germany, June 18, 1746; princess of, visited England, Aug 24, 1746.

HESS, Disturbances in, 1850; in 1830 the elector gave his people a constitution remodelled in 1850; in 1851, endeavouring to evade his own act, by demanding money without the regular budget; the chamber declined voting it, the elector then declared the chamber and constitution, and country in a state of siege, and, proclaiming martial law, he was forced to fly into Hanover; he soon after called in foreign troops, and ultimately restored his own will as the law of the land, by the first and last argument of kings.

HESSIANS, Botly of, taken into English pay, 1726; again Hessian troops, 6000 in number, landed in

England in May 15, 1756; re-embarked for Germany, April 28, 1757; Hessian corps raised to fight against the Americans, the prince to be paid £30 per head for all killed off; in Dec. 23, 1786, the account being settled, the sum of £471,000 was paid into the bank, to the credit of the landgrave of Hesse, being the sum due to him upon his bargain. This sum, divided by 30, gives the loss of the Hessian corps alone, in that vicious war, at 13,700 men put *hors de combat* to the landgrave's gain. There is no such facile mode of knowing the English loss of life; to this circumstance Lord Chatham alluded, when he spoke of the ministry having recourse to the shambles of every German despot to slaughter our fellow subjects in America. The armed force maintained by this petty state is but 10,000 men, so that more than its whole standing army was put to death in America under its successive reinforcements. A force was again applied for from this mercenary principality to put down the rebellion in Ireland, 1798.

HOLLAND, a portion of the territory of the Belgæ, in the time of the Romans, who were subdued by that people, 47 A.C. It contains about 10,000 square miles of surface. After the Romans it was conquered by the Frisians, Danes, and Franks. The portions near the Rhine and Meuse were divided into petty earldoms. In 923 Theodric, or Diodric, brother to Herman, Duke of Saxony, was appointed Count of Holland by Charles the Simple of France, Zealand and Frisland were included in his domains. Guilderland was added by Henry IV., emperor of Germany in 1079 and became a duchy, 1339;

Utrecht was governed by its powerful prelates. Florence IV. carried on hostilities against the Flemings and Frisians, dying at Antioch on an expedition to the Holy Land, 1189; William I. formed a league with John, king of England, the emperor Otho, and Ferrand, earl of Flanders against France, 1213, but he was taken prisoner at the battle of Bouvines; John, earl of Holland, married Elizabeth, daughter of Edward I. of England; Philippina, daughter of William III., earl of Holland, married Edward III. of England; Jacquelin, heiress of Holland, 1417, wedded Jno. IV., duke of Brabant, she afterwards married in 1423, Humphrey, duke of Gloucester, but the marriage was annulled by the pope, and she then wedded, 1432, Borselen, stadtholder of Holland; the country then fell into the house of Austria by marriage. In 1566 the Dutch revolted, and in 1579, formed the famous alliance of Utrecht; William of Nassau was the stadtholder, 1579; in 1672, Louis XIV. invaded Holland, and Amsterdam was only saved by opening the sluices; William, the stadtholder of Holland, ascended the throne of England in 1688; the stadtholdership was declared hereditary, 1747; in 1756, the French formed a connection which was opposed to the stadtholder and England; in 1780, war broke out between Holland and England, which ended in the peace of 1782; the decay of the famous republic exhibited, so that in 1787, the Duke of Brunswick subdued it without resistance; joining the coalition to replace the Bourbons on the French throne, Holland was subdued by the French in the winter of 1794-5, when the canals were all frozen; the stadtholder sought a refuge in England; the fleet, fell into the hands of Admiral Mitchel, Aug. 30, 1799; the territory was next made a kingdom under Louis Bonaparte, June 5, 1806, who abdicated, July 1, 1810; Holland was then united to France; after 1814,

it was joined to Belgium, and made one kingdom, under the Prince of Orange, as King of the Netherlands, but was separated again in 1830; Belgium being made a separate kingdom, under Prince Leopold, of the house of Coburg, as King of Belgium, Holland retained its own king, with the title of King of the Netherlands, who abdicated 1840, and was succeeded by his son.

HOLLAND, Events in. The sea broke into Dort, over the dykes, and covering the country, more than 100,000 people perished, 1446; Spain oppressed the people cruelly, and her tyranny and barbarity caused a revolt in some of the states, which entered into the treaty at Utrecht, when they elected William as stadtholder, who was assassinated four years afterwards, in 1584, by emissaries of King Philip II. of Spain; the Dutch East India Company was founded 1602; and a fierce struggle ensued for thirty years, which terminated by the King of Spain being obliged to acknowledge the freedom of Holland, 1609; the Dutch feeling their strength made war against Spain, in America and the East; they captured the rich Spanish convoys, with several millions sterling, and amply avenged themselves upon their oppressors, 1635; they went to war with Cromwell, 1653, and were beaten by Admiral Blake, 1653; William, the stadtholder, marrying the daughter of James II. of England, ascended the throne, as William III, 1688; the office of the stadtholder was made hereditary in the family of Orange, 1747; the French marched into Holland, 1793, and were enthusiastically welcomed; the Dutch fleet defeated by Admiral Duncan, off Camperdown, Oct. 11, 1797; a new constitution was given to the country, in 1805, with a grand pensionary at its head, April 26 1805; restored at the general peace, the house of Orange had Belgium annexed to its dominions, but governed unwisely, which caused a separation and insurrection, 1830;

Antwerp was besieged, and war commenced, when a treaty between Holland and Belgium, signed at London, put an end to the united empire, April 19, 1839; William I., who had abdicated, died, Dec. 12, 1844; Louis Bonaparte, who had adopted the title of Count St. Leu, the ex-king, died at Leghorn, July 25, 1846; William II. died, March 17, 1849; William III., his son, regnant, 1853.—Princes of Orange: Philibert de Chalons, 1502; Rene de Nassau, 1530; William of Nassau, first stadtholder, 1579, born 1544; Philip William, his son, born 1584, died 1618; Maurice, 1618; Frederick Henry, 1625; William II., 1647; William III., 1660; William IV., 1702; William V., 1711; William VI., 1751, died 1806; William Frederick, 1806; Louis Bonaparte, 1806, abdicated, July 1, 1810; William Frederick, Prince of Orange, 1813, who was made first King of the Netherlands, March 16, 1815, abdicated, Oct. 7, 1840; William II., 1840; William III., 1849, regnant.

HOLLAND, Population: On the 1st of January, 1833, the population of this country, as appears by an official enumeration, amounted to 2,460,954 souls, independently of Limburg and Luxemburg. As the average yearly increase is about 60,000, the present number of its inhabitants may be estimated at 2,520,900. That of Belgium was, on the same day, in 1833, 4,142,257, the increase in the four years preceding having been 485,257, or, on an average, 121,314 per annum.

HOSPITALS of London, *see* Guy; the French statistics of hospitals

state that the number of beds in London hospitals is not in proportion with that of the other capitals in Europe, comparatively to their respective populations. The London hospitals only contain 5000 beds. Its mortality amounts yearly to 45,000 inhabitants, or to 123 daily. In 1800 the population of the metropolis was only 1,000,000 souls, the mortality 22,000, and the number of beds 4350. Thus, whilst, the population and mortality increased, in the last 45 years, by nearly one-half, the number of beds in the hospitals augmented only one-seventh. There exist, it is true, in London a number of charitable institutions, and many manufacturers have infirmaries, in which the workmen who have not the means of being attended at home, or who dislike entering hospitals, find medical relief. The population of Paris now exceeds 900,000. The number of beds in the hospitals is 10,000, and the mortality, as compared with that of London, proportionally the same, or 60 per day. The population of Vienna is 330,000 souls; the number of beds in the hospitals 5700, and the annual mortality 17,000. At Berlin, the population is 365,000 inhabitants; the number of beds 3000, and the annual mortality 9000. At St. Petersburg, the population is 476,000 inhabitants; the number of beds in the hospitals, 6000; and the annual mortality is 11,000. At Warsaw, the population is 150,000; and the number of beds in the hospitals 4000. It results from these returns that Paris is, after London, the capital offering the smallest proportion of beds in the hospitals.

HUNGARY Water first noted, 1631.

HUNGARY, the ancient Roman Dacia, afterwards conquered by the Huns, Avars, and other savage tribes of Slavonic origin; afterwards conquered by the Magyars, remaining under dukes from their past settlement, in 884; St. Stephen, 999, was the first king of Hungary, it having been independent from 920; the Poles overrun the country 1061; and next the Tartars and other barbarous tribes; Louis I. called the Great, subdued a great part of Dalmatia, and carried his arms into Italy, 1342; he was succeeded by his daughter Mary, who was denominated "King of Hungary;" dying in 1392, the succession was disputed, and Sigismund, Marquis of Brandenburg, who had wedded Mary, was elected. 1411 he was made emperor of Germany; Albert of Austria married the daughter of Sigismund, 1438, and they jointly reigned; hence grew the power of the house of Austria. Ladislas, king of Poland, succeeded, but was killed in the battle of Werna, fighting against the Turks; John Hunniades was appointed regent. Ladislas, the son of Albert, was poisoned, 1457, and the power got into the hands of the son of Hunniades; Mathias Corvinus proclaimed king by the states, in the plain of Rakos, near Pesth. In 1485 he seized upon Vienna and the Austrian states, and held them until he died, 1490. He was the greatest prince that ever ruled in Hungary, brave, prudent, and learned, he founded a fine library at Buda; in 1516, Louis II. of Hungary lost his life at the battle of Mohatz, fighting against the Turks, when 12,000 Hungarians fell, and 20,000 were made captives; the house of Austria again filled the throne of Hungary in 1541, under Ferdinand I., who was brother to

the emperor Charles V., but John Zopolski was elected by the Hungarians, and supported by the Turks. In 1541, Ferdinand ruled alone, and was elected emperor of Germany, 1558. The crown of Hungary afterwards remained with the emperors of Germany until 1804, when the emperor became emperor of Austria only, in the person of Francis I. of Hungary and II. of Germany. The grand duchy of Transylvania was considered a part of Hungary until 1540, when, in consequence of a treaty between the Vaivode and Ferdinand of Austria, it began to be regarded as a separate state, and Stephen Battori, 1571, held the rule until 1602. Hungary had been always governed by its own code of laws under its kings, since the house of Austria had become masters of the crown; they always vigorously defended their ancient laws, while, until 1785, the people were in a state of villanage; in 1764, the emperor and queen of Hungary attempted to define the law of landlord and tenant, or peasant; Joseph II. suppressed villanage in Moravia, Bohemia, and Hungary, 1786; the freedom there was still, rather that of the aristocracy than of the people. Hungary possessed nearly 6,500,000 of population, more spirited and active than the plodding, ignorant Austrian, whose *Index Expurgatorius* at Vienna exceeded that of Rome, 1812; the university at Buda had a large revenue some years since. The continued aggressions of Austria upon Hungary, with the view of destroying the old constitution, and assimilating it to the other dependent provinces of the empire, produced a revolt in 1848, the state of other parts of the Austrian dominions presenting a favourable opportunity for the purpose. Sept. 20, 1848, the Hungarians beat the Ban of Croatia in an open combat; the treacherous conduct of Austria induced the Hungarians to declare

the kingdom independent, Dec. 8, 1848; the Hungarians defeated by the Austrians at Szikszó, Dec. 28, 1848, and by the Ban Jellachich, at Mohr, Dec. 29, 1848; driven over the Waag, Jan. 2, 1849; Buda taken, Jan. 5, 1849; the Hungarians completely defeated the Austrians at Gran, April 17, 1849; the Austrians obliged to fly from Pesth, April 18; and craved aid of Russia, and a Russian army marched to help them, May 1, 1849; the first battle between the Austro-Russians and the Hungarians, the latter retire across the Waag, June 21, 1849; battle of Acs, July 2, 1849; the Hungarians rout the Ban Jellachich, July 14, 1849; the Hungarians defeated by the Russians, in a three-days' combat, and their leader, Görgey, retreated, July 15, 1849; battle of Komorn, with the Austro-Russians, July 16, 1849; Bem, the Hungarian, entered Moldavia, July 23, 1849; the Hungarian army worsted before Temeswar, Aug. 9, 1849; Komorn surrendered to the Austrian overwhelming forces, Sept. 28, 1849; the war soon after terminated, with endless Austrian proscriptions and executions.

been deprived of his drum by a magistrate, a drum was continually heard going in his house for two or three years, and the owner was tried for a wizard and transported, 1661; Greatrakes, an Irishman, who pretended to cure diseases in the way of the royal antidote then in vogue, caused high disputes in Ireland, 1665, but being examined before the Royal Society in England, fell into disrepute, 1666; Sabbati Levi, a Jew of Smyrna, who personated Christ at Constantinople, 1666; Titus Oates, a clergyman of the English Church, who made out a pretended plot to kill the king on the part of the papists, Sept. 6, 1678; in 1685 he was whipped and sentenced to imprisonment for life, but was pardoned and got a pension in the next reign, 1689; Psalmanzer, George, born in the south of France, 1679; studied among the Dominicans; he pretended to be a Japanese convert to Christianity, and before he was a heathen of Formosa, a language of which country he actually invented, and translated the church catechism into it, also writing a pretended history of the country, which passed through two editions; the imposture was detected by some of the learned at Oxford in a controversy on the subject, 1746; Fuller forged a plot against William III. for which he was fined and stood in the pillory, 1691; one Young, a prisoner in Newgate, forged the hand-writing of the Earls of Marlborough, Salisbury and others to a pretended King James; the noble lords were imprisoned, but the forgery was soon detected, and Young was fined £1000, and put in the pillory, 1692; three French refugees pretended to be prophets, and declared that one Dr. Emms would rise out of his grave, 1707; Mary Toffs, of Godalming, Surrey, pretended that she had rabbits within herself, and prevailed upon two medical men to support her cause, 1726; Elizabeth Canning, for her frauds and impostures was

found guilty of perjury and transported in 1753; Bamfylde Moore Carew, king of the beggars, born July 1693; passed his life in impositions upon the credulity of others, and was often in prison; the Cock Lane Ghost, by William Parsons and his wife, was detected, 1762; Joanna Southcote, who has had a multitude of followers, and declared she had conceived a new Messiah, died, Dec. 1814; Joseph Smith, the founder of the Mormons, who pretended to a revelation from heaven, engraved on gold plates, found in one of the back States of America, 1827; he was shot in a squabble by one of the U. S. soldiers.

IMPROPRIATIONS, Henry VIII., in 1539, having destroyed the monastic establishments of his country, found, that of the many livings belonging to them, they reserved the great tithes, allowing the small to the vicar, or him who served the church; Henry, therefore, bestowed the tithes among his favourites.

INCENDIARISM, for this crime burning to death was the penalty, in *temp.* Edward I.; made high treason, 1429; denied benefit of clergy, 1528; many offences of this nature in Kent, 1830; in Suffolk, 1830; except in particular cases the punishment of death remitted, 1827-8; amended, 1837; as to farming property, 1844.

INCEST, common in England under the Saxons; Vortigern married his own daughter, 446; the Portuguese sanction it; in 1760, the Queen of Portugal married her own uncle; and Joseph, the son of that marriage, married his aunt, the princess Mary, 1777; Don Miguel of Portugal was betrothed to his niece, Donna Maria, 1826. It was once punished with death in England, and again under the Commonwealth, May 14, 1650.

INOCULATION for the Smallpox, first tried upon seven condemned criminals, 1721; the advantages of inoculation were calculated thus:—if one in seven die of the smallpox in the natural way, and one in three hundred and twelve by inoculation, then as one million divided by seven gives 142,857-1-7—one million divided by 312 gives 3205-2-4130. The lives saved by

inoculation upon one million must be 139,652-32-2184. A most surprising difference! but what would these calculators have said to any one who should have suggested, that the period would arrive when the chance of having the smallpox should be only equal to the chance of dying under the improvement of inoculation. Five hundred and three deaths from smallpox was the total within the bills of mortality for the year 1826, which on the average was formerly never less than four thousand. The bishops and clergy preached against the practice of smallpox inoculation down to 1760; vaccine inoculation, the substitute, was introduced by Dr. Jenner, Jan. 21, 1799; he was voted £10,000 by parliament for the discovery, June 2, 1802; Napoleon in honour of Dr. Jenner liberated a prisoner of war, Dr. Wickham, at his request, and afterwards whole families of English, never refusing a request from him.

INQUISITION began in the bishops extending their power beyond excommunication and the forfeiture of their estates to the church for heresy; in 800 they cited persons and punished them with penances, imprisonment, and death; Pope Innocent III. instituted the inquisition in 1203; and Gregory, 1229, completed it, giving the power and direction of the inquisition to the Dominicans; St. Louis established it in France, 1226; it was established in Spain, 1226; in Portugal, 1536; the last auto-da-fé was held in 1781; in 1818, the inquisition being restored, after the French had put it down, through the reinstatement of Ferdinand III., the torture was again used, both for political and religious victims, and was not finally put down until the Cortes destroyed it in 1820. The French in 1809 laid open the instruments of torture they found there; great is the ingenuity of these horrible ecclesiastical inventions. This infamous tribunal is said to have caused,

between the years 1481 and 1759, 24,658 persons to be burnt alive, and between 1481 and 1808, to have sentenced 288,214 to the galleys, or to be imprisoned.

INSANE persons; these have been on the increase since the cares and luxuries of life have become so engrossing under civilisation; lunatics were one in the thousand of the population, in 1840. Of 1000 male insane, 110 were from drunkenness.

Besides these, there are the West of England, Norwich Union, Beacon, Guardian, Protector, Hope, European, Rock, Mentor, Pelicon, Mutual, English and Cambrian, Catholic, Law, General, New Equitable, India and London, Great Britain, Palladium, Sovereign, Equitable Loan, and others: There were seventy-two in all, 1851. There are other insurance offices in different parts of England.

INSURANCE Policies, first used in Florence, 1523; the first society established in Hanover, 1530; in Paris, 1740. By an official view of the business of the various offices for fire insurance, it appears that forty-six offices or companies, for duty, paid to government for insurances effected by them, in one year, £659,377. The duty being 3s. for every £100 insured, it follows that the total amount of property insured is, in round numbers, about £439,585,000. Such being the value of property which the assured of necessity make upon their premises, goods, furniture, &c., and it being probable that as much in.

amount may remain uninsured, if the value of all other kinds of property were added, we should have a sum of wealth for England alone that would be almost incredible.

INTEREST of Money 2d. per week for 20s., in 1260; 45 per cent., 1307; 10 per cent. established as legal interest, 1546. The ignorant subjects of Edward VI. repealed this law as unlawful and most impious: but it was restored in Queen Elizabeth's time. In those days the monarchs could not borrow without the collateral security of the metropolis. Reduced from ten to eight per cent., 1624; when "interest" was first used for the word "usury." Reduced by the Rump parliament to six per cent., and confirmed at the Restoration; to five per cent., 1714; from four to three per cent., 1750. Interest of the national debt reduced, 1749, 1823.

INTEREST of Money in Scotland reduced from ten to eight per cent., 1633; in Spain, Germany, and Flanders, by Charles V., 1560; reduced in England to eight per cent. 21 James I., 1624; to six per cent., 1651; and to five by 13 Anne, 1714; all above was declared usury, but this statute was repealed; act against, repealed; rate of legal interest in Ireland was six per cent., 1773; in the United States, eight per cent.

Such heavy rains fell in London and its vicinity, that many parts of the outskirts of the town were laid under water, and great damage was done, May 8, 1818. The river Drance in the Valais, having its course obstructed by the fall of an avalanche, a large lake was formed. The barrier by which the water was retained being at length undermined, it gave way, and the tremendous torrent rushed down the Val di Bagne with such rapidity as to sweep every thing before it, and reduce the whole of the vale, for several miles, to a state of utter ruin, May 16, 1818. Floods

in the neighbourhood of Boston and Spilsby, by which much mischief was done, May 1818. Heavy inundations in the Fen counties, which deluged 5000 acres of land between Boston and Market Deeping only, and destroyed many of the wheat crops, June, 1819. An inundation at Cheshire, in consequence of a thunder storm, Aug. 1820. An inundation in consequence of a heavy fall of rain, at Holywell, in Flintshire, which did immense damage. On the water reaching the heated steam furnaces of the copper works, the furnaces burst with an explosion like a heavy clap of thunder, and some part of the works took fire. A loss of several thousand pounds was sustained by the copper and cotton works alone, Oct. 1821. An inundation in the Lincolnshire fens, Jan. 1822. Heavy floods in the Thames, from Christmas Day, 1821, to Jan. 7, 1822, in which, at times, the water rose four inches higher than in the great flood of 1774. The immense quantity of rain which fell in Monmouthshire, undermined three acres of wood on a slope near Rinefield, and caused it to slide down to the river, Feb. 1822. Moravia much injured by floods, 1822. At Vienna, 50,000 houses laid under water, Feb. 1830; 10,000 houses, at Canton, in China, swept away, and 1000 persons perished, Oct. 1833. IRELAND, originally divided into five kingdoms, Ulster, Leinster; Munster, Meath, and Connaught, besides petty principalities ever at war with each other. The Pope Adrian IV, permitted Henry II. to invade Ireland, on the understanding that he held the country as a fief of the church, and made every Irish family pay a Carolus to the holy see: Ireland, down to that period was in a barbarous state; of 171 kings of the earlier dynasties, going back to the flood, and most of whom had probably no existence except in legendary lore, not more than a dozen are represented as dying a natural death. The title of kingdoms to five petty states, with not two millions of inhabitants in the whole territory, marks the low social state of the country at that time. In the invasion of Ireland Strongbow preceded Henry II., Aug. 23, 1170; the conquest of Ireland by Henry II., landed near Waterford, Oct. 26, 1171; conquered the whole island, 1172; cantoned the island among ten of the English court, Strongbow, Fitz-Stephen, De Cogan, Bruce, De Lacy, De Courcy, Burke, Fitz-Andelm, De Clare, De Grandison, and Le Poer; Roderick O'Connor, king or chief lord of Connaught, was permitted to retain his throne; John introduced the English laws and customs, and gave them a charter of liberty, 1210; Henry III. confirmed the same, 1216; Edward Bruce, of Scotland, invaded the island, and was crowned king, 1315; defeated at Armagh by the English, 6200 Scots were put to the sword, and their king beheaded, 1318; Lionel, Duke of Clarence, married the heiress of Ulster, 1361; Richard II. landed at Waterford, with 4000 men-at-arms and 30,000 bowmen, and gained the people by knighting their chiefs, 1394, 1399; the cruel head-act passed at Trim, which gave any one who found thieves robbing, by day or night,

the power to kill and cut off their heads, for which, whoever brought the head was to receive a reward, 1465; the Irish compelled to adopt the dress of the English, and use surnames, 1478; no man was to be taken for an Englishman in Ireland who had not his upper lip shaved, and it was no felony to kill an Irishman in time of peace; Henry VIII. assumed the title of King of Ireland, 1542; the reformed religion introduced by the clergy, who did not know the language, 1584, many of them men of loose lives; numerous Catholic priests executed for exercising their functions, 1580, 1597; the garrison of Limerick surrendered upon terms, 1583, and was then put to the sword by Lord-deputy Gray, 1583; discontent in Ulster, 1589; 17 ships, with 5394 men, saved of the Armada, washed on the coast of Ireland, 1589, all put to the sword by Sir William Fitzwilliam, the governor, under the pretence that they might side with the discontented Irish; Ireland first divided into shires, 1502; Tyrone's insurrection, 1595; he defeated the queen's troops, and took the fort of Blackwater; revolt of the Earl of Desmond and its suppression; 574,628 acres of land seized upon or forfeited, and offered at 2d. or 3d. per acre, none of the native Irish being allowed to purchase; a body of Spaniards landed in Kinsale, Sept. 23, 1601, under Don Juan d'Aguila, but the Irish did not join him; Ulster became wholly vested in the crown, 1612; a dreadful famine in Ireland, from the royal troops destroying the corn, 1612, three children seen feeding in one place on their dead mother, —and children waylaid and eaten, —people with their mouths green from eating nettles and docks; King James published an act of oblivion, 1610; insurrection in Ulster, 1641; a massacre of the Irish in Island-Magee, by the Scotch, Nov. 1641, followed by one of English Protestants, when 10,000 are said to have been put to death; the Mar-

quis of Ormond arrived in Cork, Sept. 1648; a peace made by the confederate Catholics, Jan. 17, 1649; the royal supporters conquer most of the principal towns; Cromwell landed at Dublin, Aug. 15, 1649; stormed Drogheda, and put the garrison to the sword, Sept. 3, 1649; Cromwell reduced Ireland to obedience, transporting the people to the colonies, or driving them to the continent, 1652; the Irish population that remained driven into Connaught, 1654; Duke of Schomberg landed in Carrickfergus, 1689; siege of Derry, 1689; landing of King William III. at Carrickfergus, June 14, 1690; battle of the Boyne, July 1, 1690; treaty of Limerick, Oct. 3, 1691; Limerick surrendered to General Ginekle, Oct. 3, 1691; ratified by the king, 1695; the treated subsequently violated by the English agents, 1693, 1695, 1704; linen manufacture patronised by the government, 1696; some indulgences granted to the Catholics, 1778; Ireland admitted to a right of free trade, 1779; discharged from a submission to the English council, 1782; Order of St. Patrick instituted, 1783; the rebellion commenced, May 4, 1798; Union of the two countries, Jan. 1, 1801; Emmet's revolt, July 23, 1803; English and Irish exchequer united, Jan. 1817; King George IV. visited Ireland, Aug. 12, 1821; the currency equalised, Jan. 1, 1826; Roman Catholic emancipation granted, April 13, 1829; poor-laws introduced, July 30, 1838; repeal meetings first held, March 19, 1843; trial of O'Connell, Jan. 1844; again, for a political conspiracy, Feb. 12, 1844, found guilty; Irish National Society for Education, incorporated Sept. 23, 1845; potato dearth all over Ireland, 1845; Smith O'Brien and others of the physical force party, forsook the repeal association, July 29, 1846; O'Connell spoke the last time in the House of Commons, Feb. 8, 1847; died at Genoa, May 15, 1847, aged 73; frightful famine in Ireland, and £10,000,000 granted

by parliament to relieve the people, 1847; deputation of Smith O'Brien and others to Paris, to the members of the insurrectional government, April 3, 1848; great meeting of the Young Irelanders in Dublin, April 4, 1848; arrest of Mitchell, editor of the United Irishman, May 13, 1848; he is found guilty, and sentenced to 14 years' transportation, May 26, 1848; Duffy, Martin, Meagher, Doherty, and others, arrested July, 1848; the habeas corpus suspended in Ireland, July 26, 1848; Martin sentenced to 10 years' transportation, August 14, 1848; Smith O'Brien tried for high treason and found guilty, sentenced to death, Oct. 9, 1848; the sentence commuted to transportation for life; fatal Orange affray at Dolly Brae, and lives lost, July 12, 1849; the queen visited Ireland, Aug. 6, 1849; the opening of the incumbered estates act in Dublin, in pursuance of an act passed July 28, 1849; the first court held in Dublin, Oct. 29, 1849; immense sales effected in 1850 and 1851.

IRELAND, History and Kings of. The early history of this country is enveloped in fable, as with all countries before their emergence from barbarism. Their writers go back to alliances with Pharaoh, king of Egypt; the Romans, during 475 years after the invasion of England by Julius Cæsar, did not find it worth colonization, though well aware of its site and size; St. Patrick is supposed to have arrived about the year 448; patronised by a monarch named Lughaidh, killed by a thunderbolt, as two out of three of his immediate predecessors were said to be—Dathy, at the foot of the Alps, 398, and Loughaire, 421.

Though this list begins 453, upon the strength of monkish legends; there were 26 monarchs up to the year 4 of the Christian era; 21 were killed or poisoned, 3 died a natural death, one choked himself, and one fled into Scotland. Before Christ the Irish historians reckon up to the flood. They aver that they are of Phœnician origin, 2048 years before Christ; two Milesian princes conquered Ireland, say the Irish historians, 1300 years before Christ; and from that date seven reigns (the monarchs all slain,) succeeded to that of Tigermas, 1221, A.C., who first introduced idolatry into the island; 38 kings followed, in all 46, to the year 4 A.D. Some reigns were joint sovereignties with sons or brothers, of whom, 34 were killed by their relatives or successors, and two were suicides. Besides these 46, between 804 A.C., and 735, there were six kings, all slain except one; between 659 and 540 A.C., there were eleven kings all slain in battle or assassinated; and between 419 and 275 A.C., there were ten kings, of whom only three died natural deaths; between 263 and 68, A.C., there were fifteen kings, of whom eleven were murdered or died in battle; from 36 A.C., to 4 A.D., two more reigned; in all, from 1300 A.C., to 4 A.D., true Milesians, 171 in number, down to the English conquest of the island in 1172 A.D.

IRELAND, Population of, 1625,

1,600,000; in 1731, the entire population of Ireland amounted to 2,010,221 persons, of whom 700,453 were Protestants, and 1,309,768 Roman Catholics. It appears, therefore, that in the whole kingdom the excess of the latter above the former, amounted only to 609,315. At this period, Ulster contained 360,682 Protestants, and 158,028 Roman Catholics. In the year 1752, the whole population had increased to 2,317,584. Sir William Petty, who had excellent means of knowing, says that

IRELAND, Church Revenues of. There were four archbishoprics and eighteen bishoprics in Ireland before 1833, ten of which have ceased by the church temporalities act, being either united to other sees or abolished; number of parishes, 2348; benefices, 1385; resident clergymen, 860; diocesan land, 670,000 acres; tithes, &c., revenue, 1831, about £2,000,000 per annum.

IRELAND, Revenue of, when that of England was £1, 9s. pr. head, 1778, that of Ireland was 6s. 8d.; in 1784, the expenditure was £1,098,184, and the debt, funded and unfunded, £2,179,208. In 1805, the sum raised for Ireland was £10,000,000, of which £4,729,406 was the ordinary revenue, the rest by loan; at the time the national debt of Ireland was £53,296,356. Ireland pays one-seventeenth of the general expenses of the empire.

IRELAND, Longevity in. The salubrity of the Irish climate is proverbial. In the county of Antrim, with 270,000 to 300,000 inhabitants, there were 55 persons noted in the papers who had passed their 92nd year, and also the following centenarians, between 1786 and 1840.

IRISH Mitred Abbots, among the suppressed religious houses of Ireland, from 1637 to 1641, when Henry VIII. seized their revenues, and distributed them among his favourites; twenty-four of the heads had been till then peers of parliament:—The abbot of the Cistercian

monastery of Mellifont in Louth, the first of that order founded in Ireland, in the twelfth century; the abbot of the Cistercians of Bective in Meath; the abbot of the Cistercians of Baltinglass in Wicklow; the abbot of the Cistercians of Dunbrody in Wexford; the abbots of the Cistercians, Tintern in Wexford; the abbot of the Cistercians of Jerpoint in Kilkenny; the abbot of the Cistercians of Douske in Kilkenny; the abbot of the Cistercians of Tracton in Cork; the abbot of the Cistercians of Monaster-Nenay in Limerick; the abbot of the Cistercians of Abington or Wothney in Limerick; the abbot of the Cistercians of Holy Cross in Tipperary; the abbot of the Cistercians of Monaster-Evin in Kildare; the abbot of the Cistercians of St. Mary's Abbey in Dublin; the abbot of the Augustinians of St. Thomas the Martyr, in Dublin; the prior of the Knights of St. John of Jerusalem, at Kilmainham in Dublin; the prior of the Augustinians of the Holy Trinity or Christ Church, Dublin; the prior of the Augustinians of All Saints in Dublin, now Trinity College; the prior of the Augustinians of SS. Peter and Paul at Newtown, near Trim in Meath; the prior of the Augustinian monastery of the Virgin Mary at Louth; the prior of the Benedictines of Downpatrick in Down; the prior of the Augustinians of Kells in Kilkenny; the prior of the Augustinians of Athassel in Tipperary; the prior of the Augustinians of Rattoo in Kerry.

Irish Committals.—The total number of committals during 1844 was 19,448, being a decrease, in comparison with 1843, of 678, or 3.37 per cent. The gross number of committals in 1839, 1840, 1841, 1842, and 1843, were respectively 20,392, 23,831, 20,796, 21,186, and 20,126. The decrease in the number of committals was confined almost entirely to miscellaneous offences; greater crimes increased.—Class 1, Offences against the

person, with violence. Under this head 5,482 persons were committed in 1844, being an increase of 40, or 0.73 per cent., compared with 1843, including 28 additional cases of murder. Class 2, Offences against property, with violence; 1,058 persons committed, and 6,377 individuals under Class 3, Offences against property, without violence. The number charged with murder during 1844 amounted to 129, being an increase of 27.72 per cent over 1843. The number committed for murder in 1839, 1840, 1841, 1842, 1843, and 1844, were respectively 286, 155, 120, 189, 101, and 129. Under Class 3, Offences against property without violence, the principal increase appears to be in cases of larceny from the person, 118 more than in 1843. Under the head of assembling unlawfully armed, the number committed in 1843 was 74, and in 1844, 121. Of the 19,448 persons committed in 1844, the number convicted amounted to 8,042; 20 were sentenced to death, 45 transportation for life, 16 for 14 years, 526 for 7 years, and 113 for shorter periods; 2 to imprisonment for 3 years, 107 for 2 years, 539 for 1 year, 4,842 for 6 months and under, and 1,738 fined and discharged. Of the capital sentences in 1844, 9 were executed, of which 8 for murder. The information respecting the amount of education amongst those committed was imperfect; 6,131 cases were reported unascertained; of the ascertained cases, 4,848, or 24.92 per cent., could read and write; 2,584, or 13.28 per cent., could read but not write; and 5,885, or 30.25 per cent., could not read or write. The ascertained ages of those committed were, 959 under 16 years of age, 2,851 between 16 and 21, 5,332 between 21 and 30, 2,447 between 30 and 40, 1,141 between 40 and 50, 475 between 50 and 60, and 223 above 60. The steady and continued decrease in the number of persons committed under the age of 16, is "one of the many results which

follow the diffusion of a sound and practical system of national education." The committals under 16 were in 1840, 6.48 per cent.; in 1841, 7.01 per cent.; in 1842, 5.45 per cent.; in 1843, 4.12 per cent.; and in 1844, 4.93 per cent.

The greatest quantity of iron ever made in one year, previous to 1836, was in 1828, and out of the whole quantity made that year in Great Britain, 279,512 tons were produced from the iron works of South Wales, increased 75,470 tons in 1836, compared with 1828. Great as has been the increase of the make in South Wales, yet the increase in Scotland has been much more; in the year 1828, Scotland produced 37,000 tons, and in 1836 it increased to 80,000 tons.

IRON, total made in Great Britain, 1848, 2,093,736 tons.

IRON first discovered in America, in Virginia, 1715.

IRON bullets first used in England, 1550.

IRON Mill for slitting bars, the first in England was set up at Dartmouth, 1590. New method of making bar-iron from pig-iron, by Mr.

Cort of Gosport, in 1785, and superior to Swedish iron.

IRON MASK, a state-prisoner in France, so named from an iron mask which he wore for 43 years that he was confined in several places, finally in the Bastille. He was supposed to be a prince, and was always most respectfully treated; a number of individuals were named, but none were ever proved to be the correct party; he died, Nov. 19, 1703.

ISLINGTON Church, Middlesex, rebuilt, Aug. 1851.

ISMAEL, Siege of, taken by the Russians, after an heroic defence, Dec. 22, 1790; Suwarrow, so well known as the "Butcher of Ismael," put 30,000 men, the entire garrison, to the sword; and that not satiating his thirst for vengeance, he gave the place up to pillage to his barbarian soldiers, and ordered 6000 women to be massacred. His royal mistress, Catherine of Russia, ordered Te Deum to be sung for the exploit.

There are no longer any Jews in Spain and Portugal; there never have been any in Norway; Sweden did not admit them till lately; in the Austrian States they enjoy some rights; in England they par-

ticipate in the rights of Dissenters; in Russia they are tolerated, under strict surveillance. Lastly, in the States of the German Confederacy, in France, in the Netherlands, in Prussia, the Jews enjoy all the rights of citizens, without, however, being eligible to places of public trust; this last disability does not exist in France, since, according to the fundamental law of the state, all Frenchmen are admissible alike to civil and military employments. In the United States of America, they are elected to offices of trust.

Jews, the first arrival of the, in England, 1079; to invoke the divine clemency at the solemnization of the Passover, they were falsely accused of sacrificing a young lad of twelve years old, the son of a rich tradesman at Paris, by first whipping his flesh from his bones, and then crucifying him; several were executed, and all the Jews plundered and banished France, 1180. Seven were condemned to pay the king 20,000 marks, or suffer perpetual imprisonment, on a charge of circumcising a Christian child at Norwich, and attempting to crucify him, 1235, and 20,000 marks extorted; cruelly massacred in London at the instigation of the clergy, on the coronation of Richard I., 1089; 500 besieged by the mob in York, cut each others' throats to avoid the cruelties of the people, 1190; many of both sexes massacred by King John, others imprisoned, or had their teeth knocked or eyes torn out, 1204; on a charge of attempting to crucify a child at Lincoln, 1235, for this eighteen were hung; in London, the population rose upon them for the usury of one man, and murdered 700, in 1262; no Jew allowed to enjoy a freehold, 1269; every Jew, who lent money on usury, was commanded to wear a plate upon his breast, signifying that he was an usurer, or to quit the realm, 1274; 280 were hanged and quartered for clipping and coining, 1277; the same year, the Jews accused of

crucifying a child at Northampton, for which fifty were drawn at the tails of horses, and hanged; all the synagogues were ordered to be destroyed, 1282; all the Jews in England were apprehended in one day, their goods and chattels confiscated to the king, and they, to the number of 15,000, banished the realm, having only sustenance money allowed, 1286; they were restored by Oliver Cromwell; driven out of France, 1394; 500,000 out of Spain; to the number of 150,000 out of Portugal, 1492; they retired to Africa, Portugal, and France. It was against them that the inquisition was there first established. There was not a Jew in this island from 1610 to 1624; four executed for the murder of Mrs. Holikins and servant, Dec. 9, 1771; naturalization act passed, 1753; repealed next year; sixty-six were killed by a floor giving way at the celebration of a wedding at Mantua, among whom were the bride and the bridegroom's mother, June 3, 1776; the Jews of Spain, Portugal, and France declared to be citizens, 1790; great Sanhedrim assembled in Paris by Napoleon, Jan. 20, 1807; Alexander of Russia granted land to converted Jews, on the sea of Azoph, Sept. 1, 1820; bill for Jewish emancipation lost in the English House of Commons, by 228 against 165, May 17, 1830; Mr. Moses Montefiore, the first Jew knighted by the queen, Nov. 9, 1837; the Emperor of Russia issued a ukase, that the title of citizen of the first class should be held by any Jew worthy of it, 1839; horrible persecution of the Jews at Damascus, Feb. 1, 1840; act to relieve Jews from taking oaths to municipal offices, 1845; Baron Rothschild returned to parliament for London city, by a majority of 6019 votes, his opponent Lord John Manners only polling 3104, Aug. 3, 1847; the peers on the bill for the purpose being sent to them, obstructing it, though a second time returned to a

seat in the house; Mr. Salomons elected member for Greenwich, but declared ineligible without taking an oath that he was a Christian, Sept. 21, 1847; Baron Rothschild re-elected for London, 1852.

KORAN, or the Alcoran of Mahomet, written about 610; the prophet aimed in it to unite Jews, Christians, and heathens, in the worship of one God, under particular laws and ceremonials, which demanded obedience to himself. It was beautifully written in the purest Arabic. The contents of the volume were said to be a revelation from heaven made to him, Mahomet, during a space of twenty-three years. The style is fluent, concise, and elegant, and often rises to the magnificent and sublime where the attributes of God are described. The divine mission of Moses and of Jesus is

fully admitted. The doctrine inculcated by this successful impostor is, that there is but one God and that Mahomet is his prophet. The Koran was translated into Latin in 1143; and has appeared in most European languages. It contains 3000 verses.

LACALZA, Order of Knighthood, began in Venice, 1400.

LABURNUM, brought into England from Hungary, 1576.

LACE, Flanders, more valuable than gold, mentioned, 1320; one ounce of fine Flanders thread has been sold in London for £4; such an ounce made into lace may be here sold for £40, which is ten times the price of standard gold, weight for weight.

LACOCK Nunnery, Wilts, built 1133.

LACTEALS, the, discovered by chance in opening a dog, by Asellius, July 23, 1662; in birds, fish, &c., by Mr. Hewson, a surgeon of London, 1770.

LADRONE Isles discovered, eleven in number, by Magellan, 1520.

LADIES, first introduced at court by the Queen of Louis VII., about 1500, being much later than in England.

LADYBIRDS, extraordinary flight of, near Southampton, two miles long, observed, Aug. 1826.

LADY-DAY, the 25th of March, said to have been instituted in 350, but much more probably not until about 700; before the alteration of

the style, the new year in England began on that day; in Scotland, the 1st of January was ordered to be the new year's day there, instead of March 25, Nov. 27, 1599.

LA HOGUE, Battle of, between the English and Dutch, under Admirals Russell and Rooke, and the French, under Admiral Tourville, when the French lost twenty-one sail of ships, May 19, 1692.

LAKENHEATH, Norfolk, great injury sustained at, by a sand-flood, 1667.

LAKES, American, sounded, 1826, Erie, 35 fathoms deep to 25; Lake St. Claire, 4; lakes Huron, Michigan, and Superior, in some places 900 feet deep, the latter being 300 feet beneath the ocean level.

LAKES of America, the Americans defeated by the English on those of the United States, Oct. 11 and 13, 1776, and July 5, 1777; the English defeated by the Americans, Sept. 11, 1813.

LALLY, Count, beheaded, 1766.

LAMARQUE, General, a brave French officer, distinguished under Napoleon, born, 1772; died, May 31, 1832; several thousand persons killed in Paris, in the riots that took place at his funeral.

LAMB, Dr., murdered in London, 1628.

LAMBERT, the impostor, appeared, 1487.

LAMBERT, General, discarded by Cromwell, received a pension of £2000 per annum, 1658; usurped authority on the parliament, Oct. 13, 1659; tried and imprisoned for life, June 6, 1662.

LAMBERT executed by Henry VIII., for denying the corporal presence, 1538; being burned slowly, in Smithfield, for the doctrine which Henry soon afterwards supported himself.

LAMBERT, Daniel, died, June 21, 1829, weighing 52 stone 11 lbs.

LAMBETH made into a borough, 1832.

LAMBETH Palace built, 1188; chapel founded by Hubert, archbi-

shop, 1196; tower of the church erected, 1375; furniture and books burned here by the followers of Wat Tyler, June 1381; the Lollards' tower here the place of imprisonment and torture of the followers of Wickliffe, many of whom were burned at the instigation of the clergy; Lord Cobham was burned alive, suspended on a gibbet by a chain round his body, 1417; this episcopal palace recently adorned and beautified, at an expense of £52,000.

LAMERATTO, Isle of, depopulated by a volcano, July 29, 1731.

LAMPS used in London streets, 1681; gas lamps introduced, 1814; Davy's wire gauze lamp for coal mines, 1817, rendered perfect.

LANARK Castle, in Scotland, founded, 1314.

LANCASHIRE, since 1745, increased above a million in population; the whole revenue of the customs in that year not a third of what it was in the port of Liverpool in that county, in 1852.

LANCASHIRE, disturbances in, and destruction of power-looms, May, 1826.

LANCASTER Castle built, 124; county of, made palatine by Edward III., in favour of his son, John of Gaunt, 1356; court of the duchy instituted, 1356; taken by the Pretender, Nov. 24, 1745.

LANCASTERIAN Family, the first king of the, Henry IV., 1399.

LANCASTERIAN Schools first established by Joseph Lancaster, and at first much opposed, because he was a dissenter, and education would make 'the people too wise. Dr. Bell, from India, nearly about the same time, introduced the principle, and was supported by some of the orthodox, 1808, whence resulted the ultimate establishment of the system, at which Lancaster had laboured from 1798; but the schools were not so general as to overcome all opposition until 1817. The plan was introduced into Russia, 1819.

LANDAFF, Cathedral of, erected

1120, with pointed arches; in ruins, 270 feet long, 70 broad.

LANDAFF, Bishopric of, founded, 180.

LANDAU taken by the French, Nov. 19, 1703; retaken by the imperialists, Nov. 1704.

LANDEN, Battle of, gained by the French over the English and Dutch under William III., July 19, 1693, owing to Dutch cowardice; arsenal of, blown up, Dec. 20, 1794.

LAND TAX, the first in England established, 990; in 1018 this tax returned £82,000; every hide of land paid 3s. in 1109, which was equal to 6s. 6d. in modern money, besides the difference in the price of commodities. This tax nearly always existed. The tax was established in its present form, 1689-90, under William III., since which it yielded £227,000,000, up to 1800; it was modified, or placed as it now stands, 1760; the equalization of the duties under this tax has long been a subject of interest. The cause of the disproportion of its operation proceeds from its having been a kind of voluntary contribution, levied for the service of the state, in the reign of King William. The sum agreed to be raised by it (viz. £2,000,000) was divided into 513 parts, being the number of the members for England and Wales; and it was left to the option of the several counties to pay as many of those parts as they thought proper, or could afford. The consequence was, that some of them, celebrated for their loyalty, took upon them the payment of immense sums, while others, although equally capable of bearing the burden, contributed very sparingly indeed. For instance, Middlesex agreed to pay eighty parts, Essex and York twenty-four each, and Norfolk and Kent twenty-two each, whereas Westmoreland and Cumberland would subscribe only one each, Rutland two, and Durham three. In this manner it has ever since been voted from year to year down to the present time.

THE FOLLOWING TABLE SHOWS THE QUANTITY OF LAND IN THE SEVERAL COUNTIES, THE NUMBER OF MEMBERS RETURNED BY EACH, AND THE PARTS PAID, TOGETHER WITH THE AMOUNT OF THE PRODUCE.

Before the union with Scotland, England sent 513 representatives to parliament, and by the act of union 45 Scotch were added to them, which, if they had gone by the land-tax, ought not to have been so many; but it seemed the intention of the then legislature, that but 45 Scotch should sit in the house, for at that time few or no Scotchmen had estates in England, nor had any of them, till some years afterwards, qualifications to be chosen for any English borough. The whole kingdom of Scotland pays but £45,954 : 1 : 2 towards the land-tax. The total amount of the tax, in 1832, was reduced to £1,184,340. The power to redeem it was one of Mr. Pitt's arbitrary measures, and whether future generations will be bound by it, crippling, as it does, the means of the country, is very doubtful. It does not extend to Ireland. When the excise was made more onerous and stringent, under Walpole, the country gentlemen more openly declared, that one of the objects was to lighten their payments on land, by throwing them on the rest of the community. The unequal pressure of the tax in the vicinity of the metropolis may be seen as follows:—The land tax being nominally 4s. in the pound, London, Westminster, and Middlesex, do not pay 3s. Kent, Norfolk, Suffolk, and Hampshire, and the inland counties, pay 20d. to 22d. The great counties of York, Devon, and Somerset, pay 1s. 6d. Cornwall pays less. Wales, Lancashire, and the northern counties, pay under 1s. Scotland pays about the forty-first part of the land-tax, though the value of their lands is about one-sixth part that of England. Several parishes in London and Westminster pay full 4s. in the pound, while others scarce pay a third part. Marylebone parish, consisting of 2500 acres, of which one-third is occupied by buildings, pays the enormous sum of *one penny farthing*, said afterwards to pay *a farthing* only; when they make it a

halfpenny there is an overplus. Sergeants-Inn, Chancery-lane, containing about 15 apartments, formerly for the judges and sergeants, worth about £50 per annum, one with another, the whole about £900 per annum, a tax of 4s. in the pound would be £180, pays no more than £31, which is about 9d. The three Temples pay about 10d. The county of Middlesex, the real property of which is stated at £5,595,537 per annum, pays £236,246, or about 10d. in the pound; while in Lancaster it is £3,087,774, and the land-tax only £19,500, or about 1½d. in the pound; the great county of York pays about 4½d., while Bedford is near 1s. 8d. in the pound; the little county of Rutland pays about 10d., Buckingham 1s. 5½d., while Cumberland is let off for 1½d.; Stafford pays 5½d., and Hampshire, about the same value, is mulcted in 11d., or just double; the large county of Northumberland is let off for 2½d., and Sussex is charged 1s. 3½d., Hertford, 1s. 6d., Westmoreland, 2½d.; similar discrepancies run through them all, and the average rate per pound in the English counties is 9d., and in the Welsh counties 5d.; but glaringly disproportionate as are these rates in the counties, those levied upon towns and parishes are still more unequal and unjust; for example, St. Paul, Covent Garden, paying 2s. 4d. in the pound, and Marylebone only *a farthing*; Westminster, in the aggregate, at about 10d.; the city of London near 1s. 6d.; the town of Liverpool does not pay *one-tenth of a penny*; Manchester contributes not exceeding 2d.; the city of Norwich the enormous rate of 2s. 1d.; Brighton not more than 1½d.; Exeter city, 1s. 3½d.; Leicester, 2½d.; Cambridge, 1s. 9d.; Lancaster, ½d.; Oxford, 2s. 3d.; Berwick, ¾d.; Gloucester, 1s. 7d.; Dover, 7d.; Bury, 3s. 0½d.; Harwich, 7d.; Winchester, 1s. 5d.; Southampton, 3½d.; Kingston, 1s. 9½d.; Tewkesbury, ½d.; Winchelsea, 3s. 1d.; Bath,

1½d.; Leeds, 5½d.; Southwark, 11d. All the towns varying, and not one of them assessed with reference to their actual wealth or importance.

LAND generally let in England for 1s. per acre, in 1544; the rental of England, including land, houses, and mines, was £6,000,000 in 1600; twelve years' purchase was the value; about 1690, the rental amounted to £14,000,000, and 18 years' purchase; it rose to 35 years' purchase in 1778, but fell to 24 in 1779; in 1798, land, and the rent of houses, were together computed at £60,000,000; in 1814 and 1815, lands, houses, mines, &c., were assessed at £53,495,375 in England, and £6,642,955 in Scotland; in 1842, at £85,802,734; England, and £0,481,763, Scotland; in 1845, £88,724,252 in England, and £9,734,546, Scotland; in 1848, at £94,538,472, England, and £10,714,423, in Scotland. Total, £115,252,895, for England and Scotland.

LAND increased in value, between 1815 and 1848, 5 per cent., or £8,500,000; the houses, manufacturing buildings, and warehouses, 30 per cent., or £26,000,000.

LAND sunk in Finland, to the extent of 4000 ells square, but the inhabitants escaped, Feb. 1793; a tract of 120 acres, and 60 feet in depth, slid with a tremendous noise into the river Nid, near Drontheim, Norway, March 7, 1816.

LAND Carriage of Fish to London supported by an act of parliament, 1764.

LANDER, Richard, of Truro, one of the African brother-travellers, died of the wounds he received from the Africans at Fernando Po, Feb. 6, 1834; born, 1804. John, his brother, died in London, Nov. 16, 1839; born, 1806. To them was due the discovery of the course of the mysterious Niger.

LANDING of the Saxons in England, 449.

LAND, prices of; in 1792 ~~arm~~ let for £170 per annum, let in 1803

for £240; in 1813 for £320; a house at £50 in 1793, let in 1806 for £65, and about the end of the war at £70; following which, provisions, clothing, labour, professional charges, were £30 per cent. higher in 1806, than in 1792, and from 1806 to 1813 rose so rapidly, that in 1814 they were 67 per cent. above what they were in 1792.

LANDS waste in Great Britain by examination, in 1794, were found to be 22,351,000 acres, which, if cultivated and enclosed, reckoning an annual increase of 9s. per acre, the rent would amount to £10,057,950, on a supposition that the yearly produce would be £1, 7s. per acre on three rents, it would be worth £30,173,850 per annum to the community; before 1801, 2,837,476 acres were enclosed, and since that time a vast deal more, which shows its fruit in the increased corn production of the country.

LANDSHUT surrendered to the Austrians, June 23, 1760. •

LANERCOST Priory, Cumberland, founded for monks of the Augustine order, 1169.

LANGUAGES, 3664 known; there are 937 in Asia, 587 European, 276 African, and 1624 American, or dialects. Professors of languages were not appointed in the English universities until the reign of George I., 1724, and George II., 1736.

LANGUARD Fort, Essex, built 1618.

LANGUEDOC, Parliament of, erected by Charles VII., 1441.

LANGSIDE, Battle of, between the regent of Scotland and the army of Mary Queen of Scots, the latter being defeated, May 13, 1568, the queen flying to England.

LANTERNS, invented by King Alfred, 890; London lighted with them, 1415.

LANTPHY Court, Pembrokeshire, built 1335.

LAON, Battle of, between the Prussians and French, under the walls of the town, March 9, 1814.

LAPIS Calaminaris, discovered in England, 1561.

LAPLANDERS, several arrived in London with game in fine preservation, after travelling a vast distance, Feb. 8, 1816.

LASIANA, a Spanish order of knighthood, began 1420.

LATERAN Council, held in the Basilica of the Lateran at Rome; there were five noted councils, four were held in 1122, 1139, 1179, and 1512; the last but one was attended by 400 bishops and 1000 abbots.

LATIN ceased to be spoken in Italy, 581; in France in the ninth century; it was abolished in England in law processes, 1731. The Latin nation was reduced to Roman subjection, 339 years before Christ; the Latin and Greek churches were united, 1004.

LATIMER, Bishop of, burned by the Oxford priests, Oct. 16, 1555.

LATTON Priory, built 1270.

LATITAT, a writ calling individuals to the Court of King's Bench; it was of old usage, but abolished in actions where the defendant was not to be held to special bail by an act 2 William IV., c. 39, May 23, 1832.

LATITUDE, the extent of the arc described by the earth's surface, or by the heavens over it, reckoning north or south of the equator to either pole; a degree of the latitude was first measured accurately in 1737, in lat. $66^{\circ} 20' N.$, and found 60.493 ; at the equator, in 1744, in lat. 12° it was reported, 68.743 ; in England by Mudge, 69.148 . The degree of latitude from the equator to the pole numbering 90° , is of the same length in all parts of the globe. Hipparchus of Nice is said to be the first among the ancients who measured a degree of latitude, 170 years before Christ.

LAUD, the notorious zealot, arch-

bishop of Canterbury, who claimed the visitation of both the universities, 1637; and designed to bring the nation back to Rome, or as near its ante-reformation creed as possible; he supported the Star Chamber in its lawlessness, and the efforts of the king to force his own creed upon Scotland; he was imprisoned and executed, Jan. 10, 1645.

LAUENBERG, Duchy of, ceded to Denmark by Russia, in exchange for Pomerania and Rugen, June 4, 1816.

LAUNCESTON Castle, built by the Romans; the town about 900; incorporated, 1555.

LAUREATE, a sort of versifier and jester, attached to the servile train of our English kings from 1251; the laureate was paid wages to the amount of 100 shillings, in the reign of Edward IV., he was called "poet;" Gibbon recommended the abolition of an office so meanly dependent and servile to a man of genius, when he chanced to hold it. Nahum Tate held the office after Shadwell dying, 1715; Nicholas Rowe, 1718; Lawrence Eusden, 1730; Colley Cibber, 1757; William Whitehead, 1785; Thomas Warton, 1790; Henry James Pye, 1813; Robert Southey, 1843; William Wordsworth, 1850; Alfred Tennyson, 1850.

LAUREL Frigate, lost in Quiberon Bay, the crew being made prisoners, Jan. 31, 1812.

LAUREL brought to England from the Levant, prior to 1529; the Portugal laurel brought here in the sixteenth century; the Laurus indica from Madeira, 1665; the Alexandrian laurel, 1713; the glaucous laurel brought from China, 1806.

LAURESTINA, Man-of-war, lost off the Bahamas, the crew saved, 1813.

LAURESTINUS, brought to England from the south of Europe, 1596.

LAVALETTE, condemned at Paris for high treason, escaped from prison, disguised in his wife's clothes, Dec. 21, 1815. Major-general Sir

Robert Wilson, Michael Ruce, and Captain Hely Hutchinson, were sentenced to three months' imprisonment for aiding his escape from France, April 24, 1816.

LAVENDER, brought from the south of Europe in the fifteenth century.

LAWs, British, translated into Saxon, 590; the Saxon laws of Ina published, 709; Alfred's code of laws made, 890; those of Edward the Confessor, 1065; Stephen's charter of liberties, 1136; Henry II., his confirmation of, 1154, 1175; Oleron, or maritime laws of Richard I., 1194; Granville's digest, 1181; Magna Charta, 1215. *See* Statutes at Large.

LAW's Bubble, the most ruinous of financial schemes; by schemes, and plausible statements to aid his own purposes, he had raised himself to be comptroller-general of the French finances; he was to pay off the French debt by establishing an East India and Mississippi Company; the French minister accepted his project, 1710; in 1716, he opened a bank in his own name, and the rich and poor alike became sharers

the scheme; in 1718, Law's was made a royal bank, and the shares rose to twenty times their original value; and in 1719, were worth more than all the current coin of France; in the next year the whole scheme failed, nearly overthrew the French government, and ruined thousands of families, 1720; in England he was emulated by the South Sea Directory, 1716.

LAWYERS excluded from parliament, *temp.* Henry IV.; called barristers, and said to have been first appointed by Edward I.; they number about 1200 in England; including barristers and attorneys, there are said to be 14,000 in England and Wales, 1845.

LAWYERS in Scotland; between 1830 and 1840, with a population little exceeding two millions and a half, there were three hundred and fifty-four courts; nine hundred and forty-four judges, and probably not

less than ten thousand seven hundred and forty persons living by and connected with the law. The expense of the judiciary establishment proper was not less than £177,000, while the maintenance of the whole judiciary corps cost the country probably about £2,367,000.

LAW Association Charity, founded 1817.

LAW Institution, founded 1825; gained a charter, Feb. 16, 1827.

LAW cheap counsel fees, in the Churchwardens' accounts of St. Margaret's, Westminster, for the year 1476, is the following entry:—"Alsoe paid to Roger Fylpott, lerned in ye lawe, for his Counsel givinge, IIIs. VIIIId., with fourpence for his dinner."

LAWNS and Thread Gauze, manufactured in Paisley in 1784 to the value of £164,385: 16: 6½.

LAYER'S Conspiracy to seize George I., the Prince of Wales, Lord Cadogan, and the principal ministers of state, to take the bank and tower, and bring in the pretender; he was tried, convicted, and hung, March 17, 1722.

LAZARUS, St., Order of, instituted, 366.

LEAD, Roman, pig of, found at Cromford Moor, 1777.

LEAD, a metal found in many countries, but in England principally in Cumberland, Derby, Devon, and Cornwall, in some places rich with combined silver; Cumberland and Derby alone yield 15,000 tons per annum. The substance called black-lead, really plumbago, is found of fine quality, at Borrowdale, in Cumberland only; the Clydesdale mines were opened, 1613; 13,900 tons are exported annually.

LEADEN Pipes for conveying water, invented, 1236, or rather re-

invented, for they were known to the Romans, as the ruined villas of their baths exhibit.

LEADENHALL, London, built as a storehouse for the poor, 1446; farmed for £1000 per annum, and £1000 fine, July 2, 1750.

LEAD HILLS, Scotland, shock of an earthquake felt in, Feb. 14, 1749.

LETTUCE came to England from Flanders, 1520.

LEVANT Trade commenced 1511; fell, but revived 1579.

LEVELLERS: any individuals who advocate a state of political or social equality; two leaders of this doctrine in Germany, demolished the effigies and images in churches, and taught that all rank was superfluous; Muncer, one of those persons, swelled his followers to 40,000,

but was defeated by the Prince of Hesse, to whom he gave battle, which he lost; he was beheaded in 1525; the charge of "Levelling" was directed against some persons in London, 1648; and the name was also applied to advocates of parliamentary reform, under the ministry of Pitt and Perceval, not long after the former minister had moved for the same reform in the House of Commons. Hardy, Tooke, and Thelwall, were so styled by the opponent party, 1794.

LEVERS, Dr. hanged for treason, July 13, 1750.

LEVER, Sir Ashton, collected the Leverian Museum, which was left to the public to receive by a guinea lottery, 1785; only 8000 tickets out of 36,000 could be disposed of, science having no hold on the public mind; it was afterwards sold by auction and scattered, to the irreparable loss of inquiring minds, Sept. 20, 1806.

LEVY, Lyon, a Jewish diamond merchant, threw himself from the top of the monument in London, Jan. 18, 1810.

LEWES Priory and Castle, Sussex, built 1078; the battle of Lewes, between Henry III. and Montfort, with the barons, May 14, 1264; the royal army defeated, and the king with his relations made prisoners; a pit with bodies discovered near, 1846; a miracle is recorded of this priory:—

"1230.—The chapel of the Blessed Mary was built anew, and on the vigil of St. Nicholas the first mass was celebrated in it.

"1243.—On the day of the anniversary of Earl William, the foundation was laid of the new work of our church.

"1245.—Guichard, the prior of Lewes, came to England, and on the eve of St. Pancras entered the church with a great attendance, and was admitted with honour by the Convent.

"1250.—In this year, on the day of the Saints Processus and Marti-

nianus, a certain sick man, whose arm and both knees were as if contracted, was cured at the Cross of St. Pancras, at Lewes."

LEXINGTON, battle of, the first fought between the English and the Americans, in which the latter were defeated, April 19, 1775.

LEWIS Dauphin of France, invited to the throne of England by the barons, 1216.

LEWIS XV., of France, crowned at Rheims, Oct. 14, 1722; sent home the Infanta of Spain as too young for a wife, April 5, 1725; married a daughter of the king of Poland, July 22, 1725; presented Humphry Parsons, lord mayor of London, with his picture set in diamonds, Feb. 1730; his bed took fire, and he narrowly escaped burning to death, July 1, 1747.

LEVDEX, Siege of, sustained against the armies of Spain, during which 6000 of the inhabitants died of famine and pestilence, 1574; its celebrated university founded 1575; jubilee at, instituted 1675; university nearly destroyed, with much of the town, by a vessel with 10,000lbs weight of gunpowder blowing up, Jan. 1807.

LIBEL, *ex officio* informations for, from Jan. 1801 to 1807, only fourteen filed under the administrations of Pitt, Addington, and Fox; from 1807 to 1811, under Perceval's ministry, forty-two were filed, sixteen being tried, and twenty-six kept *in terrorem* as a means of oppression, 1811; Colonel Lilburne fined £5000 for writing one, 1637; imprisoned for another, 1645; tried again and acquitted, 1649; Lord George Gordon, for a libel on the French queen, condemned to five years' imprisonment, and fined £500, Jan. 28, 1788; Dr. Withers for a libel on Mrs. Fitzherbert, July 14, 1789; the *Times* for a libel on George, Prince of Wales, Feb. 1790; the *Morning Post* for one on Lady E. Lambert, damages £4000, July 9, 1792; Peltier for a libel on Napoleon Bonaparte, Feb. 21, 1803; Wm. Cobbett found

guilty of a libel against the King's Hanoverian Legion, June 15, 1811, fined £1000, with two years' imprisonment.

LIBEL, three *ex-officio* informations filed against Hone for, who pleaded not guilty, being political parodies in the manner of creeds, &c., June 16, 1817; tried, Dec. 18, and acquitted after a manly defence of seven hours' duration; tried for the second libel, Dec. 19, another judge being sent down by the ministry for the purpose; after defending himself for eight hours, again acquitted; Dec. 30, tried for a third parody, and acquitted, after a defence of nine hours; three thousand pounds subscribed for him in approbation of his conduct, Jan. 1818.

LIBELS, blasphemous and seditious writings, prosecutions for, under the Castlereagh administration, from Dec. 31, 1812, to Dec. 1822, when that nobleman committed suicide, were 270 in number.

LIBELS dispersed by gunpowder, in Westminster Hall, July 14, 1736; the papers were laid near the Chancery Court, and powder within the bundle suddenly exploding, threw out bills containing five libels on the Gin act, Mortmain act, and others, which the court declared, without the "law's delay," to be wicked and audacious, and offered £200 for the discovery of the author or authors; act against blasphemous and seditious libels, introducing banishment for them on the second offence, 60 George III., 1820; act for better regulating the law of, 1 William IV., July 1830; law giving summary protection to persons employed by parliament in reporting its proceedings and in their publication, April 14, 1840.

LIBERTINES, a religious sect which maintained that all that was done in the spirit of God, 1525; that sin was only sin to those whose consciences told them so; that the soul died with the body, and men should live without scruples about heaven or hell,—hence arose the

bad sense and use of the term libertine.

LIBERTY of the Press allowed in Denmark, 1770; of conscience, published under Queen Mary, 1553; under Charles II., 1672, but soon revoked; again published under James II., April 4, 1687.

LIBRARY, the first private one the property of Aristotle, 534 B.C. The first public library of which we have any certain account in history, was founded at Athens by Hipparchus, 526 B.C. The second of any note was founded at Alexandria by Ptolemy Philadelphus, 284; it was burnt when Julius Cæsar set fire to Alexandria, 47 B.C. The first library at Rome was established, A.D. 167. At Constantinople, founded by Constantine the Great, about A.D. 335; destroyed, 477; a second library, formed from the remains of the first, at Alexandria, by Ptolemy's successors, was totally destroyed by the Saracens, 640, containing 600,000 volumes, all precious literature of antiquity; the library of Richard de Bury, chancellor of England, 1341, was the first private collection in this country, or perhaps in Europe; he gave fifty pounds weight of silver, for thirty or forty volumes, to the Abbot of St. Albans; the Vatican at Rome by Pope Nicholas V., 1446; rebuilt, and the library considerably improved by Sixtus V., 1588; the Imperial of Vienna, by Maximilian I., about 1500; the Royal, of Paris, by Francis I., about 1520; the Escorial at Madrid, by Philip II., 1557; of Florence, by Cosmo de Medicis, 1560; the Bodleian, at Oxford, founded 40 Elizabeth, 1598, has 400,000 volumes, and 30,000 MSS.; the Cottonian, formerly kept at Cotton-house, Westminster, founded by Sir Robert Cotton, about 1600; appropriated to the public use and benefit, 13 William III., 1701; partly destroyed by fire, 1731; removed to the British Museum, 1753, where there is a fine library collected by George III.,

at the expense of £130,000, consisting of 63,000 volumes; this library was clandestinely sold by George IV. to Russia, and the fact only discovered just in time to prevent its embarkation: the nation paid the money for it 1823, and kept it in the country; the Museum library contains about 600,000 volumes, being inferior to that of Paris, which numbers above a million; there are between 60,000 and 70,000 visits to the Museum, and 8781 to the print room, in the year; the Cotton MSS. in the catalogue, fill a folio volume; the Harleian four vols.; the Lansdowne two; the oldest MS. is a copy of the Gospels, of the 7th century; 317 vols. of Syriac MSS.; 10,221 maps; 29,626 vols. of MSS.; 2946 rolls; 23,772 charters and instruments, 208 MSS. and 55 on papyrus. There are libraries at the British Institution, Sion College, Red Lion street, London, and those of the University of Dublin, and the Advocates at Edinburgh; in France, besides the Royal Library of Paris, and numerous others, every large town and city contains a public library, some of great value. The private libraries of England are more numerous and valuable in the aggregate than those of other countries, although (except the Oxford and British Museum libraries) the public ones are inferior; the Radcliffean, at Oxford, founded by the will of Dr. Radcliffe, who left £40,000 to the University for that purpose, 1714; at Cambridge, 1720, to which George I. gave £5000, to purchase Dr. Moore's collection.

LICENCES, a mode of raising money, introduced by Richard I., 1190; for public houses, 1551; brewers, excisable articles, &c., 1784; gaming houses, 1620; lottery office keepers' licences; pedlars and hawkers', 1697.

LICHFIELD Cathedral, built 656; rebuilt 1148, by Roger de Clinton; 400 feet long, 66 broad, spire 258 feet; once styled the bishopric of

Lichfield and Coventry; see founded 656, after which it was made archiepiscopal; in 1075 the see removed to Chester; then back again to Lichfield, in 1102; the first bishop of Lichfield alone was Samuel Butler, 1840.

LICHFIELD, city of, a charter granted to, as a city by Edward VI. 1549; Richard II., kept his Christmas at Lichfield castle, 1397, when 200 tuns of wine, and 2000 oxen were consumed.

LIGGE, taken by the Duke of Marlborough, Oct. 14, 1702; by the French, June 15, 1705; palace at, destroyed by fire, Feb. 1734.

LIFE Boat, the Hoylake, upset, and ten of twelve in it were drowned, Dec. 29, 1810; at Rhyl, and six lives lost, 1853; at Carnarvon, men saved, 1852; at Lytham, 1852; the invention of Mr. Greathead, who was rewarded by a sum of money from parliament, May, 1802.

LIFE Preserver, a new safety jacket to prevent drowning, invented by a Bath mechanic, 1823.

LIFE Preserver from shipwreck, Manby's mortar and apparatus for, first used, Feb. 1808, and in the first twenty years saved fifty-eight vessels, and 410 lives.

LIGHT, the Zodiacal, discovered, 1659.

LIGHT first used in churches in the day, 409; lights were used at night in imitation of the lamps lit in the Jewish and Pagan temples, which were generally kept burning.

LIGHT, Refraction of, discovered by Snellius, 1624; moves at the rate of 200,000 miles in a second of time, 1667; the light of the sun takes eight minutes and the same number of seconds to reach the earth, or travel 95,000,000 of miles; light and colour, theory of, given by Sir Isaac Newton, 1666.

LIGHTHOUSES, erected by commercial nations upon capes, rocks, promontories, or on board vessels moored near shoals, to direct the course of shipping; that called the Pharos, at Alexandria, was the most cele-

brated and the oldest, visible 42 miles; the Eddystone, off the coast of Cornwall, is the most skilful and daring edifice in an engineering point of view, in 50 degrees, 10 minutes, 54 seconds, north latitude, and 4 degrees, 15 minutes, 43 seconds, west longitude. There were 270 on the coasts of England, Ireland, and the Channel Islands, in 1848; in South Africa, the East Indies, and in Tasmania, 44, 1848; west coast of Africa, 5, 1848; British North America and the West Indies, 89; South America, 23; north and west coasts of France, Spain, and Portugal, 137.

Value of exports from Liverpool, 1850, the returns gave £34,891,827, equal to half of all the United Kingdom. The shipping amounted to 3,262,253 tons; the sum expended on the port of Liverpool and the Mersey, said to amount to £12,000,000 sterling, 1850. The modern adaptation of iron railways for rapid conveyance, was first brought into practical operation by the Liverpool and Manchester railway. The traffic upon this line to midsummer, 1836, since which such particulars have not been made public, was as follows:—

These figures do not include great numbers of cattle, sheep, and swine conveyed from Liverpool towards the interior of the country. In less than six years there were conveyed upon this railway nearly two millions and a half of passengers, and little short of a million and a half tons of merchandise and coals. Exactly one century before the opening of this line, the town of Liverpool contained only one carriage, and no stage-coach came nearer to the town than Warrington, the traffic being then principally carried on by means of pack-horses. The inland trade of Liverpool is assisted by canals, the most important is the Leeds and Liverpool canal, 128 miles long. The Mersey and Irwell navigation served until the opening of the Liverpool and

Manchester railroad. The Duke of Bridgewater's canal connects the Mersey with Birmingham and Staffordshire, and, joining the Grand Trunk canal, perfects the communication with London. The trade with North Wales, through the western part of Cheshire, is carried on by means of the Ellesmere canal; and the river Weaver navigation connects Liverpool with the salt district and the heart of Cheshire. The number of baptisms in the town and vicinity during the year 1838, was 10,145, the number of marriages 3017, and of burials 9979.

LIVERPOOL and Ireland, trade between, in produce in the years 1831, 1832, and 1837, compiled by the managers of the steam-vessels engaged in that trade:—

LOGTOWN, North America, destroyed by the French, May 10, 1754.

LOGWOOD cultivated in Carolina, 1732, first cut by the English in the bays of Campeachy and Honduras, 1662.

LOLLARDS, a term for those who dissented from the church of England before it became reformed; in fact, to the followers of Wickcliffe; the first of these honest reformers was Walter Lollard, 1315, whom the Roman Catholics burned at Cologne for his opinions, 1322; they were proscribed by parliament, 1406; Sawtree, the incumbent of St. Osith, London, was the first burned in

England for these opinions, 1401; in 1414, numbers were thus executed and one of the towers at Lambeth palace, in which the iron rings yet remain to which they were chained, became a place of their incarceration, and probably of torture; Sir John Oldcastle, was one of those whom the clergy thus persecuted and burned, 1417.

LOMBARDS, considered usurers, had their articles seized by the king, 1337; they were first sent to England by Pope Gregory IX., to assist individuals in paying their tithes to the church, by lending money to them, 1229; they were also charged with demanding usurious interest; in time they became eminent dealers in money, being generally natives of Genoa, Venice, or Florence;

they had their offices in Lombard street; accused of usury, as all foreign money lenders were in those times, Queen Elizabeth expelled them from the kingdom about 1580.

LOMBARDS, in one of the northern states of Italy; they settled there about 570, being originally German: their chief proclaimed king at Milan, 570; the Lombards extended their empire by conquests until 772, when Charlemagne annexed the territory to the German empire; annexed to Austria, 1814.

LOMBARDY in Austria: the number of Germans employed by Austria to the exclusion of the native population, compared with the other provinces of the empire, was as follows, 1850. [The lesser provinces need not be quoted.]

LONDON, Mortality of, the deaths per cent. are, males, 2·7; females, 2·24. The mortality is 66 per cent. higher in the unhealthy than in the healthy sub-districts of the metropolis, and the births are 51 per cent. higher, too, than in the healthy. The average annual mortality is about one in 41 or 42. The first bill of mortality was made in 1562. Diseases of the respiratory organs are the most fatal class. The diseases and mortality are much ruled by the districts in which those attacked reside, and the nature of the locality as to elevation of surface, cleanliness, and the purity of the air. Of 100,000 born in London, 31,671 will die under five years old; five to ten, 3408; ten to fifteen, 1381; fifteen to twenty, 1856; twenty to thirty, 5016; thirty to forty,

6816; forty to fifty, 8543; fifty to sixty, 11,470; sixty to seventy, 13,495; seventy to eighty, 11,842; eighty to ninety, 4142; above ninety, 360. The marriages to a hundred persons living in the metropolis are, for males, about 2·1; females, 1·8. The births, males to a hundred living, 6·4; females, 5·6. Measles, scarlatina, hooping-cough, hydrocephalus, convulsions, pneumonia, consumption, and teething, destroy the larger number, except old age, which takes away a tenth part, or 11,521 out of each hundred thousand.

In 1790, about the time the population seemed to make a first movement, the following statement, out of 20,749 deaths, was given as the rate of London life under the ages expressed in comparison with the years 1830 to 1839. Of all born there lived—

While one in ten born in the country lives to be eighty, the returns for London do not reach that average, although they are the highest in any existing metropolis.

LONDON fortified against Charles I., in 1643; the fortifications around London were supplied by the voluntary enthusiasm of the people. An

esprit de corps animated the separate guilds of citizens. The trades marched out to the work in separate parties, bearing mattocks, shovels, and other tools, with drums beating, colours flying, and swords girded. Mixed with most of these companies were to be seen women and girls, some of them ladies of rank, carrying baskets filled with earth; many of them wrought in the trenches. From Limehouse, where they commenced, the lines stretched on to Whitechapel, to Shoreditch, to Hoxton; then along, by Holborn, to St. Giles's and Marylebone, to Tyburn and Hyde Park; whence

leading round by Tothill fields, the river was again commanded by two forts, the one erected at that station, and the other at Nine Elms, on the opposite side; from which point they stretched across the angle of Surrey, through Newington, to Redriff, where they again terminated on the stream. At each of these, and at many intervening angles, a fort commanded the adjoining approaches. There were, in all, twenty-four forts, besides redoubts, counterscarps, and half-moons, along the trenches between; the whole planted with 212 pieces of ordnance, on a circuit of 12 miles, finished 1644.

LONDON, Punishment of Loose Women; in 1383, the seventh of Richard II., the citizens of London first imprisoned such women in the Tunn, (a prison at Cornhill,) and afterwards caused them to be brought forth in sight of the world. They caused their heads to be shaved after the manner of thieves, whom they named appellators, and so to be led about the city, in sight of all the inhabitants, with trumpets and pipes sounding before them,

that their persons might be more largely known, neither did they spare the men.

LONDON University, charter of, dated Feb. 11, 1826; building commenced, April 30, 1827; college opened, Oct. 1, 1828.

LONDON Cries.—In the time of Henry VI., an antiquary writes, that London cries consisted of fine felt hats and spectacles; peas, strawberries, cherries, pepper, saffron, hot sheep's feet, mackerel;

green-peas, ribs of beef, pie, &c. In the Pepysian Library are two very ancient sets of cries, cut in wood, with inscriptions; among others are, "Buy my rope of onions;" "white, Sir Thomas's onions;" rosemary and bays; bread and meat for poor prisoners; ends of gold or silver; marking-stones; a mat for a bed; maids hang out your lights; glasses, fine glasses; a tanker-bearer; maribones, maids' maribones; ells or yards; hand-strings, or hand-kercher buttons; a brush or a table-hook; small coal, a penny a peck; I have screens at your desire, to keep your butey from the fire; buy a cocke or a gelding (capon), about 1470.

LONDONDERRY, existed 546; abbey of, burned 783; charter regarding, granted to the London Companies, 1615; town surprised and garrison put to the sword, 1606; besieged, 1641; Londonderry and 210,000 acres of land granted to the London Companies, 1689; besieged, and successful resistance under Walker, April 20, 1689.

LONGBEARD, William Fitzosborn, a notorious impostor, who pretended to a divine mission, to banish poverty and evil from the world, being the saviour of the poor; he resisted the laws, and was hanged 1197; after his death, the people came flocking from all parts of Kent to gather particles of the ground on which he had last trod, as holy relics; numbers of women waited for days, expecting that he would come to life again, and blind and lame came from far and near to touch his corpse, in the hope that they would thereby recover their sight, and the use of their limbs.

LONGEST Days.—At Berlin and London, the longest day has 16½ hours; at Stockholm and Upsal, the longest has 18½ hours, and the shortest 5½; at Hamburgh, Dantzic, and Stettin, the longest day has 19; and the shortest 7; at St. Petersburg and Tobolsk, the longest has 19, the shortest 5 hours; at

Torneo, in Finland, the longest day has 21½ hours, and shortest 2½; at Wardhaus, in Norway, the day lasts from May 21, to July 22, without interruption; and in Spitzbergen the longest lasts three months and a half.

LONGEVITY, Comparative, the mean of life in Surrey in 1848, was 45, in Liverpool 26; in London double the number live to 70 that attain that age in Liverpool, or as 16,344 to 8373.

LONGEVITY of Fish; some few instances show that fishes seldom die of old age; and that generally, *while they live, they increase in size*, which is not the case with most other animals. In the year 1775, a codfish was taken at Scarborough, which weighed 78lb. The conger-eel has been known to measure more than ten feet in length, and to exceed one hundred-weight. A

common perch (the *Perca fluviatilis*) was taken in the Serpentine river, Hyde Park, which weighed 9lb.—this fish grows slowly. A pond in the garden of Emanuel College, Cambridge, contained a carp that had been an inhabitant of it more than seventy years. A few years ago, a pike was caught in Windermere lake, which weighed 35lb. and another more recently, 33lb. There was a pike got out of the lake Zernietz, in Carniola, that was known to be nearly 300 years old, and weighed 3 cwt. This fish was put into the lake by an Emperor of Germany, who fastened a ring to its fin, with a date on it.

LONGITUDE, a reward promised by parliament for the best means of ascertaining, 1714; very accurately determined by Harrison's time-piece, 1764, for which he received the promised reward. Le Roi, in Paris, invented a watch that kept better time, 1776.

LOOKING GLASSES only made at Venice, 1300; in England, at Lambeth 1673; in 1851 at Ravenhead, where they are made larger than any where else in the world.

LOOM, the Dutch, brought to London from Holland, 1677; and since much altered and varied; There are said to be 260,000 hand-loom in England, and 75,000 power looms; steam looms introduced, 1807.

LOPER, Sir M. M., fined £10,000 and imprisoned in Exeter gaol for bribing the electors of Grampound, born 1755, died 1831.

LORCA, a city of Murcia in Spain, destroyed by the bursting of a reservoir that inundated more than 20 leagues, and carried away 1000 persons besides cattle, &c., April 30, 1802.

LORD AUCKLAND'S Island discovered by Captain Bristow, 1809.

LORD DANES, a title used in London under the Danes, 1000.

LORD HIGH CONSTABLE, an officer of the crown, hereditary until 1521, when it became forfeited to the king

by the treason of Edward Stafford, Duke of Buckingham; the same title is of ancient standing in Scotland, and was reserved in the articles of the union, 1707, to the family of Errol.

LORD High Steward of England, an officer of ancient origin, now only revived at a coronation or on the trial of a peer; the office was abolished, except as thus stated, in 1265, out of the salutary jealousy of the crown at the power of such an officer.

LORD Steward of the Household, an officer appointed 1540, in place of one entitled Grand Master of the Household.

LORD Great Chamberlain of England, a great state officer, whose duties attach to public ceremonies; the office was for centuries in the family of De Vere, from 1101; whence in 1779 it came to the Lady Willoughby de Eresby and her sister, with power to appoint a deputy.

LORD Keeper of England, differing only from the Lord Chancellor's having letters-patent, the powers are the same in both; the first Lord Keeper appointed 1116.

LORD High Admiral first appointed, 1512.

LORD Lieutenant of Ireland, the chief governor and viceroy of that island; an old appointment, first given by Henry II., 1173, to Hugh de-Lacy, lord of Meath; other governors were styled successively Lord Warden, Protector, Lord of Ireland, Lord Justice, Seneschal, Governor, Lord Deputy, Custos, and Lord-lieutenant; the first with the title of lord-lieutenant appears to have been Piers Gaveston, Earl of Cornwall, the favourite of the unfortunate Edward II., his appointment bearing date 1308; the next and succeeding viceroys were:—James, Earl of Ormond, 1329; Sir Anthony Lucy, 1331; Lionel, Duke of Clarence, 1361; Sir William de Windsor, 1369; Edmund Mortimer, Earl of March, 1380; Philip Courtney, Lord Birming-

ham, genl., 1382; Robert de Vere, Earl of Oxford, 1384; King Richard II., 1394; Roger Mortimer, Earl of March and Ulster, 1395; King Richard II., in person, 1399; Thomas, Earl of Lancaster, 1401; John, Duke of Bedford, 1410; Edward, Earl of March, 1413; Sir John Talbot, 1414; Thomas, Earl of Lancaster, 1416; Sir John de Grey, 1427; Sir J. LORDS Lieutenant of counties instituted by Edward VI., 1549.

LORD Mayor's Show, commenced 1453; in a curious description of the show in 1575, it is related that, "to make way in the streetes, certayne men were employed, appareled like devells and wylde men, with skybbs and certayne beadells." The number of persons who dined at Guildhall was one thousand, all at the charge of the mayor and the two sheriffs. This feast "costeth £400, whereof the mayor payeth £200, and each of the sheriffs £100. Immediately after dyner they go to the church of St. Paule, the men bearynge staff torches and targetts, which torches are lighted when it is late before they come from evenynge prayer." In 1585 there were children in the procession, who personified the City, Magnanimity, Loyalty, Science, the Country, and the river Thames; they also represented a soldier, a sailor, and nymphs, with appropriate speeches. The show opened with a Moor on the back of a lynx. On Sir Thomas Middleton's mayoralty, in 1613, the solemnity is described as unparalleled for the cost, art, and magnificence of the shows, pageants, chariots, morning, noon, and night triumphs. In 1655, the City Pageants, after a discontinuance of about 14 years, were revived. Edmund Gayton, the author of the description for that year, says, "our metropolis for these planetary pa-

geants is as famous and renowned in foreign nations, as for its faith, wealth, and valour." In the show of 1659, an European, an Egyptian, and a Persian were personated. On Lord Mayor's day, 1671, the King, Queen, and Duke of York, and most of the nobility, being present, there were "sundry shows, shapes, scenes, speeches, and songs, in parts;" and the like in 1672 and 1673, when the King again "graced the triumphs." At the alteration of the style, 1752, the Lord Mayor's show, which had been on the 29th of October, was changed to the 9th of November. The speeches in the pageants were usually composed by the city poet, an officer of the corporation, with an annual salary, who provided a printed description for the members of the corporation before the day. Settle, the last city poet, wrote the last pamphlet intended to describe a Lord Mayor's show; it was for Sir Charles Duncombe's, in 1708, but the Prince of Denmark's death, the day before, prevented the exhibition. The last lord mayor who rode on horseback at his mayoralty was Sir Gilbert Heathcote, in the reign of Queen Anne.

LORD Mayor of York, title given by Richard II., 1377.

LORD Mayor of Dublin, so named by Charles II., 1665.

LORDS, seven of these impeached, Jan. 9, 1715-16; others May 15, 1746.

LORETTO, order of knighthood in honour of the miraculous image, begun at Rome, 1587.

LORETTO, the site of the imposture of a holy house in which the Virgin Mary lived at Nazareth, carried by angels into Dalmatia, from Galilee, and placed here, with an image of Mary and a little child, dressed in embroidery and jewels; the town was taken by the French, 1796, and the idol carried off to France; it was afterwards restored, under a salute of cannon and bells, eight bishops carrying it to its house, with great pomp, Jan. 5, 1803.

LUGGERSHALL Castle, Wilts, built, 1199.

LUKE'S Hospital, St., established at Windmill Hill, Moorfields, 1732; the present built, July 31, 1751, in the city road; completed, 1785; cost £55,000; exempted from parish rates, 1760.

LULWORTH Castle, Dorset, built, 1610; became the residence of Charles X. of France, 1830, until he left this country for Germany.

LUNACY and Lunatics, first statutes regarding, Edward II., 1323; George II., 1731 and 1741; George III., 1770 and 1773; regarding care and treatment, 1828 and 1829. The lunatics in England and Wales, in 1849, were 14,560, 6852 being males, and 7708 females, and 10,801 paupers. Great differences occurred in different years; total number of insane persons, of all classes, recently amounted to 20,893, of whom 9862 were men, and 11,031 women; being a proportion to the amount of population (which is estimated by the census for England and Wales at 16,480,082 souls), of about .125 per cent., or 1 in 800. Of the above 20,893 lunatics, 4072, of whom 2161 were men, and 1911 women private patients, and 16,821, of whom 7701 were men, and 9120 women pauper patients. The proportion of the pauper lunatics to the population was, in England, .100 per cent., or 1 in 1000; whilst in Wales the proportion was .129 per cent., or 1 in 775, a difference of between 1-34th or 1-35th per cent. In both countries the number of insane pauper females was greater than that

of the insane pauper males; the reverse being the case as regards the "private patients." Of the 4072 private patients, there were 245 confined in county asylums, 168 in military and naval hospitals, 442 in Bethlehem and St. Luke's hospitals, 536 in other public asylums, 973 in metropolitan licensed houses, and 1426 in provincial licensed houses; whilst there were 282 single patients "under commission." Of the 16,821 paupers, 4155 were immured in county asylums, 89 in county asylums under local acts, 121 in Bethlehem and St. Luke's, 343 in other public asylums, 854 and 1920 in metropolitan and provincial licensed houses, and no less than 9339 in workhouses, &c. The private patients were maintained, either wholly or partially, at their own cost, but the pauper lunatics, of course, at the expense of the public. Independently of these, there is a large number of persons who are shut up as single patients, of whom no account is rendered in any public documents, the cures during five years have been, in four county asylums, 30; in four others 40, in four others 50, and in three 60 per cent. At St. Luke's the permanent cures, during the year 1842, were stated to have been 70, and in 1843, 65 per cent; thus this disorder is curable, in many cases, during the first year of the attack; recoveries after that period are rare. There were some time since 535 wealthy lunatics under the care of the Lord Chancellor; the value of their property was £1,000,000; the income reported to parliament to be £356,711 : 17 : 11, and the annual sum allowed for their support and maintenance, £161,151 12s. There are upwards of 4000 lunatics confined in England as private patients, not under the care of the Court of Chancery.

LUNEVILLE, Treaty of, 1801, France and Austria.

LURGAN in Armagh, Ireland, in the year 1619, contained 42 houses,

all inhabited by English Protestant settlers. In the year 1814 that elegant little town contained 379 houses, inhabited by 2,207 persons, of whom 996 were males, and 1211 females, and the majority catholics.

LUTHER, Martin, born, 1483; began the Reformation, 1518; died, 1546.

LUTTRELL, Colonel, shot by an assassin in his chair, Dublin, 22nd Oct., 1717.

LUTZEN, Battle of, between the French and the combined Russians and Prussians, May 2, 1813, in which both sides claimed the victory, and General Duroc was mortally wounded; in the battles of Bautzen and Wurtzen which followed, the allies were routed by Napoleon, May 20, and 26; but an armistice after them did not bring peace. The King of Sweden, Gustavus Adolphus was killed at the battle of Lutzen, Nov. 6, 1632, in the moment of victory; the battle is sometimes called that of Lutzengen.

LUXEMBURG and Lienburg taken by the French, 1543; by the Spaniards, 1544; by the French, 1684, and given up to Spain, 1697; taken again by the French, 1701; ceded to the emperor, 1713; taken by the imperialists, Jan. 18, 1714-15; taken by the French, June 7, 1795; ceded to the King of the Netherlands, 1815.

LUXURY restricted by an English law, wherein the prelates and nobility were confined to two courses every meal, and two kinds of food in every course, except on great festivals; it also prohibited all who did not enjoy a free estate of £100, per annum, from wearing furs, skins, or silk; and the use of foreign cloth was confined to the royal family alone, to all others it was prohibited, 1337. An edict was issued by Charles VI. of France, which says, "Let no one presume to treat with more than a soup and two dishes," 1340.

LUXURIES of the olden time; there were few chimneys in capital

towns. The fire was laid to the wall, and the smoke issued at the roof, door, or window. The houses were wattled and plastered over with clay, the furniture and utensils were of wood. The people slept on straw pallets, with a log of wood for a pillow. Lord Kaimes says that Henry the Second of France, at the marriage of the Duchess of Savoy, wore the first silk stockings that were made in France. Queen Elizabeth, in the third year of her reign, received in a present a pair of black silk knit stockings, and she never wore cloth hose any more. Before the conquest there was a timber bridge upon the Thames between London and Southwark, burnt by accident in the reign of Henry the Second. At that time (A.D. 1176,) the late old London Bridge was projected, though not finished until 1212. In the former part of the reign of Henry the Eighth, there did not grow in England cabbage, carrot, turnip, or other edible root; Queen Catherine herself could not command a salad for dinner, until the King brought over a gardener from the Netherlands. About the same time the artichoke, the apricot, and damask rose, made their appearance. Turkeys, carps, and hops, were first known in 1524. The currant shrub was brought from Zante in the year 1533; in 1540, cherry-trees from Flanders were first planted in Kent. In 1563, knives were first made in England. Pocket watches were brought from Germany, 1577. About 1580, coaches were introduced, before which Queen Elizabeth rode behind her chamberlain. A sawmill was erected near London in the year 1633; afterwards demolished, that it might not deprive the poor of employment.

LYING-IN-HOSPITALS first began in Ireland, at Dublin, the first opened, Mar. 1745; the modern, 1757; the British Old Street, 1749; Queen Charlotte's Lying-in-Hospital, 1752; the general in 1765; and

MACMAHON, Lord, hanged for high treason, Nov. 1, 1644.

MACHINE for beating books invented, doing as much in one day as two men could do in a week, 1823; another for mowing grass

invented in Pennsylvania, by which one man and a horse can mow eight acres per day.

MACKEREL permitted, together with milk, to be cried in the streets of London on Sundays, 1698.

MADAGASCAR discovered by the Portuguese, 1506; a very large island, respecting the interior of which very little is known.

MADREIRA Islands, so named from being covered with wood when first discovered; an account of its being first explored by an Englishman named A'Macham, in 1345, seems to be fabulous, and that the Portuguese, who first visited the island in 1419, were its real discoverers; they colonized it in 1431; it was occupied by the English in 1801; and again, in trust for the royal family of Portugal, Dec. 24, 1807, being restored at the peace of 1814.

MADRAS, Fort St. George erected, and colonized by the English, under the King of Golconda, 1620; taken by the French, 1746; restored to England, 1749; Fort St. George made a presidency, 1654; Bengal placed under Madras, 1658; Culcutta made a presidency, 1701; Mayor's court founded, 1726; besieged by the French, Dec. 12, 1758; Hyder marches to Madras, April, 1769; Sir John Lindsay arrived, July, 1770; succeeded there by Sir R. Hartland, Sept. 1771; Sir Eyre Coote arrived, Nov. 5, 1780; Hyder Ali defeated, July 1, 1781; Lord Macartney governor of Madras, June 22, 1781; the Madras government arrested General Stuart, who was sent to England, 1783; Lord Cornwallis visited, Dec. 12, 1790; Sir Charles Oakley succeeded General Meadows as governor of this presidency, Aug. 1, 1792; assizes ordered twice yearly, 1793; Lord Mornington visited here, Dec. 1798; General Harris with the Madras army entered Mysore, March 5, 1799; the British forces at Seringapatam, April 5, 1799; Seringapatam stormed by the British under Major-gen. Baird, and Tippoo Saib

killed, May 4, 1799; appointment of Sir Thomas Strange, first judge of Madras, Dec. 26, 1800; a fire consumed upwards of 1000 houses in Madras, Feb. 1803; the Madras army under Gen. Arthur Wellesley marched for Poonah, March, 1803; General Wellesley's victories followed soon after; mutiny among the British forces at Vellore, near 800 sepoy's mercilessly exterminated, Jan. 31, 1807; mutiny of the troops at Madras, 1809; arrival of Lord Minto at Madras; he published a general amnesty, Sept. 29, 1809; hurricane, by which the ships at anchor were driven into the town, and seventy sail sunk, many of them with their crews, May, 1811; Madras attacked by the Pindarees, 1817; appointment of the first Bishop of Madras, under act 3 and 4 William IV., cap. 85, Feb. 14, 1835.

MADRID, once a station of the Moors; ravaged, 1108; became the residence of the Spanish court, 1516; taken possession of by Charles III., June 24, 1706; retaken the same year, after being abandoned, 1710; abandoned and retaken by Philip, Dec. 2, 1710; old palace at, burned, 1734; taken by the French, 1808; a fearful conflict between the citizens and the French, May 2, 1808; Joseph Bonaparte entered Madrid as king, July 20; he soon afterwards quitted the city, which was held by the French until Aug. 12, 1812; Madrid entered by the British army, and "Ferdinand the Beloved" restored by Wellington, May 14, 1814.

MAESTRICHT taken by the Prince of Parma, after having revolted from Spain, 1579; taken by the Prince of Orange, 1648; by the French, 1673; besieged by the Prince of Orange unsuccessfully, 1676; restored to the Dutch, 1678; besieged by the French, 1748; attacked by the French unsuccessfully, 1793; soon afterwards it fell into their possession, but was restored at the peace of 1814.

MAGDALEN College, Oxford, founded, 1479.

MAGDALEN College, Cambridge, 1519.

MAGDALEN House, Goodman's Fields, opened, Aug. 10, 1758.

MAGDALEN Hospital, London, removed to St. George's Fields, 1772. This charity took its name from the nunneries called the Magdalens, on the Continent, which were inhabited by penitent courtezans; one at Naples was established, 1424; another at Metz, 1452; at Paris, 1492; an institution of the same kind at Rome, by Leo X., 1515.

MAGELLAN, Strait of, discovered, 1519, by Ferdinand Magellan, a Portuguese navigator, who died, 1521.

MAGIC Lantern invented by Friar Bacon, 1252.

MAGNA Charta, the body of laws and charter of English liberty, extorted from King John by the barons, and signed at Rannymede, June 15, 1215, a charter continually violated in subsequent reigns; several copies of this charter remain, perhaps the most perfect in Lincoln cathedral; it is remarkable that in the statutes at large, beginning with the charter of Edward I., the following most important passage to the liberty of the subject is omitted, being the parliamentary right of taxation. It stands thus in English: "No scutage or aid shall be imposed in our kingdom but by the common council of our kingdom, except to redeem our body, and to make our eldest son a knight, and to marry our eldest daughter once; and for these purposes there shall be made none but a reasonable aid. In like manner shall be done as to the aids of the city of London. And the city of London shall have all its ancient liberties, and its free customs, both by land and water. Moreover we will and grant, that all other cities and boroughs, and towns and ports, shall have all their liberties and free customs. And in order to have a common council of the kingdom for assessing an aid, otherwise than in the three cases,

aforesaid, or for assessing a scutage, we will cause to be summoned the archbishops, bishops, abbots, counts, and greater barons, singly by our letters: and, moreover, we will cause to be summoned in general, by our sheriffs and bailiffs, all those who hold of us in chief, for a day certain, to wit, at a term of forty days at least, and to a place certain: and in all the letters of summons we will express the cause of summons, and the summons being thus made the business shall proceed on the appointed day, according to the counsel of those who may be present, although not all those summoned should come."

MAGNANIME, French ship of war, taken by Admiral Hawke, Feb. 24, 1748.

MAGNETIC Power first applied to the needle, 1302; the magnet said to be known to Roger Bacon, 1294; the compass improved by Gioja of Naples, 1302; the dip discovered by Robert Norman of London, 1576; artificial magnets improved, 1751; found to be identical with electric action, and light elicited from, since the commencement of the 19th century.

MAGNIFYING Glasses, convex, invented by Roger Bacon, 1252.

MAGNESIA, a white earth prepared from the purging mineral waters and their salts, and from the residuum of sea water after the salt has been crystallized; with vitriolic acid it forms Epsom salts: Dr. Black explained its properties fully, 1755.

MAGNOLIA *Glaucia* brought to England from North America, 1688; the dwarf "pumila" came from China, 1789; the brown stalked, 1789; the purple, 1790, and the slender, 1804; the grandiflora from North America, 1731; this, the large magnolia, the *Laurier tulipier* of the French, is first seen in North Carolina, near the river Nuse, in the latitude of 35 degrees, 31; and proceeding from this point is found in the maritime parts of the southern States, as far up the Mississippi as

NATCHES, above New Orleans. It claims a place amongst the largest trees of the United States, ninety feet in height, three in diameter; its ordinary stature from sixty to seventy feet; trunk commonly straight, summit nearly in the shape of a regular pyramid. In its native soil, blooming with large white fragrant flowers disposed amidst the rich foliage of the tree, one of the most beautiful productions of the vegetable kingdom: blossoming in May, the seeds ripen in October; in its native climate it grows only in cool shady places, in brown mould, loose, deep and fertile. The most northern point in which this tree passes the winter in the open air is about Nantes, in latitude 47 degrees, 13 seconds; it begins to bear ripe fruit about Grenoble, in latitude 45 degrees; in England, more injured by being planted in an ungenial soil than the severity of the climate.

MAHOMETANISM: the great prophet of this imposture began to promulgate his opinions in 604; he wrote the Koran in a cave, not without the assistance of others; in it he endeavoured to inculcate a faith that should reconcile Jew, Christian, and Pagan; he stated it to consist of revelations made to him from above, in visions,* during which he had mentally ascended there; he instructed a few friends in his scheme, the doctrine of which was a pure theism—"there is but one God, and Mahomet is his prophet;" he spurned at images and pictures of the deity, and some of his allusions to the Supreme in the Koran are truly noble and even sublime, the whole being excellent as a composition; his rewards were sensual, fine women and a voluptuous paradise for his disciples. "In the twelfth year of his mission he converted the inhabitants of Medina, which caused his enemies at Mecca to seek his assassination, and he fled to the former place, hence the date of the Hegira, or "Flight," June 16, 622;

he soon after married his most favourite wife, Ayesha, for he advocated polygamy; he made war upon all idolaters, and the Jews, whom he sought to convert, pretending himself a descendant of Ismael, became his enemies, on which he attacked and defeated one of their tribes; he put down idolatry in Arabia, all of which he conquered, tolerating the Christians, but making them pay a certain tribute; he died, June, 632, of poison, displaying a real faith in his mission, on the ground of the good that must follow it. After his death his followers extended his doctrines to the Danube in Europe, the strait of Gibraltar in Africa, into the heart of that country, and about to the limits of China eastwards, very nearly 200,000,000 of men still professing Islamism.

MAIDA, Battle of, between the French, under General Regnier, and the English, under Sir John Stuart; the French were much more numerous than the British, and their loss was severe, July 1, 1806.

MAIDEN, an instrument of decapitation, once used at Halifax, and transplanted into Scotland by the Regent Morton, who suffered by it himself, 1581.

MAIDSTONE, Kent, a Charter granted to, 1682; greatly injured by a fire, 1756.

MAIMING and Wounding made capital crimes, 1670; modified in the digest of the statutes, made 1829.

MAIL Coaches to Bristol, established 1784; to other parts of England, 1785; freed of tolls, 1785; introduced into Ireland by Mr. Anderson, 1790; the invention of Mr. Palmer of Bath, to whom the public were indebted for the rapid increase in the prosperity of the post-office; Mr. Palmer was to be paid, under agreement, by a fixed percentage for a given time on any surplus produced by his improvement; the increase was so considerable that the government violated its faith, and after a long delay put him off with a fixed sum, vastly inferior to

that which honour and honesty bound it to bestow.

MALSON Dieu Hospital, Dover, built 1229.

MALJESTY, a title first bestowed upon Henry VIII. of England, 1520.

MALACCA Gold Mines discovered, 1731.

MALFLAQUET, Battle of, between the allies under the Duke of Marlborough and Prince Eugene, and the French under Marshal Villars; the hostile armies numbered on each side nearly 120,000 men; the French were defeated, but the loss was great, the allies losing 18,000 men, Sept. 11, 1709.

MALT. See Beer.

MALT-TAX established, 1697; increased, 1760; newly remodelled, 1766.

MALTA, Knights of, a religious military order, called the Knights Hospitallers, the Knights of Rhodes, and the Knights of St. John of Jerusalem; they became a military order in 1118; on losing Jerusalem, the knights retired to Acre, which they nobly defended, in 1290; the king of Cyprus gave them Limasol in his dominions, where they remained until 1310; they next took Rhodes, and defended it until Solyman conquered it in 1522; they

finally obtained Malta from Charles V., and they there fortified themselves so strongly, that famine alone could reduce them; in 1799, Paul of Russia declared himself their grand master; the knights belonging to the different Catholic countries were styled languages, as the French language, the Italian language, the German language, &c.; the Turks besieged Malta in 1566, but were compelled to retire, with the loss of 30,000 men; Malta was taken by Bonaparte on his way to Egypt in 1798; he found there an immense booty, and numerous Turkish prisoners, whom he set free; the island was blockaded until the inhabitants and French troops could no longer resist the attacks of famine, and it surrendered, Sept. 5, 1800; by the treaty of Amiens, England was to give the island up to the knights of Malta, but the condition was not fulfilled, and in 1814 the island was confirmed to the English crown; the observatory instruments, and notes of the observations, were all destroyed by fire here, April 6, 1789.

MAMELUKES, an Egyptian dynasty, consisting originally of a mixture of Christian and Turkish slaves, established by Saladin as his guard, 1246; they afterwards selected one of their number to rule the country, until Egypt became subject to the Turks, 1517, when they were taken into Turkish pay and recruited from all lands, with other men at arms; on the French invasion of Egypt they retreated into Nubia, 1798; they were routed by Bonaparte, and kept afterwards in the desert until the French evacuated Egypt; they then returned, endeavouring to re-instate themselves in the government, but were treacherously decoyed into the castle at Cairo, by Mehemet Ali, on the specious pretext of an entertainment, and put to death in cold blood.

MAN, Isle of, conquered by Montacute, Earl of Salisbury, from the Scotch, 1340, who received the title

of King of Man from Edward III.; given to the Earl of Northumberland, 1399; to Lord Stanley, 1405; to the Earl of Derby, 1608, by Queen Elizabeth; from him it came by inheritance to the Duke of Athol, 1735; the duke received £70,000 for the sovereignty in 1765; the nation was next charged £132,944 for the purchase of the duke's interest in the island revenues, 1829. The bishopric of Man was founded by Gregory III., and it included the western isles of Scotland, which had a bishop of their own when Man became subject to England; the Duke of Athol names the bishop to the king, who sends him to the Archbishop of York for consecration; he is not a baron of parliament; he is called the bishop of Sodor and Man, because his bishopric is joined to a little place called Sodor, in the island of Icolmkill, one of the Hebrides.

MANCHESTER, mentioned early in history as Mancunium, and said to have been occupied by Agricola, taken by the Saxons, 488; subdued by Ella, 620; St. Mary's church built, 627; Edward the Elder rebuilt the town and erected a castle, 920; erected into a manor, 1070; annual fair granted, Henry III., 1215; Salford made a free borough, 1215; land at, let for 3s. 6d. per acre, 1290; made a free borough, 1301; Flanders manufactures introduced at, by Edward III., 1330; visited by the plague, 1352; the college of the Blessed Virgin established, and rectory appointed, May 12, 1422; sweating sickness at, 1490; grammar school founded, 1524; college of the Virgin restored by Queen Mary, 1535; made a place of sanctuary, 1540; college dissolved by parliament, 1546; Manchester cottons, rugs, and friezes, mentioned for the first time, 1552; John Bradford martyred at, 1555; Ellys calling himself a prophet, appeared, 1562; the clergy of the reformed church beaten by the people, and one stabbed, 1674; renewed college charter, under Queen

MANCHESTER Mortality Rates, prior to the census of 1841; the principal districts under the registration act here comprised 200,000 persons in 1837-8, the number of births registered during the first year was 5458, and during the second year 6358. The proportion of males to females as 51·6 to 48·4, giving upon 100 births an excess of male births of rather more than 3·1-5. In 11,816 births, there were 127 cases of twins, and one case of triplets; the former being in the ratio of nearly 10·8 in 1000; Cuvier's estimation was 2 in 1000. The registered deaths during the first year, were 5611, and in the second 6234. In the two years the proportion of male to female deaths was as 52·1 to 47·9. In the Manchester district, the excess of male deaths above

male births is 1·08 in every hundred. The average proportion of births to deaths throughout the kingdom, has been estimated at 28 to 30 in 1000, respectively. The births registered in the Manchester district during the first year, were to deaths as 19·45 to 20. In the second year as 20·39 to 20. The number of coroner's inquests held during two years in Manchester was 561, amounting to 4·73 per cent. of the whole number of deaths. The number of marriages in the churches in proportion to those solemnized elsewhere, was as 93·58 to 6·42 per cent. In every 100 marriages there were solemnized by licence 9·66; by Superintendent Registrar's certificate, 6·30; and by banns, 84. The number of marriages in church without banns, and by a certificate from the Superintendent Registrar, was 0·58 per cent. Among every 1000 persons married, 14·25 were minors.

MANCHESTER Reform Meeting, best known to posterity as the "Manchester Massacre," under the Castlereagh Ministry; above 60,000 persons, men, women, and children, were assembled to hear an address from Hunt the popular demagogue, when several troops of half-disciplined Cheshire yeomanry, and Manchester volunteer light horse, were let loose on the unarmed crowd, and eleven persons were killed, and 400 wounded, Aug. 16, 1819.

MANES, the founder of a religious sect, 278.

MANICHEANS, a Persian sect, which held that there were two deities, one good and the other evil; they arose under the leadership of Manes in 277. This religious imposture spread over the principal countries of the East; like the recent notorious Joseph Smith, the Mormon, he declared that he was inspired, and sent to comfort mankind by his doctrines, and to cure diseases; he was put to death by Sapor, king of Persia, 290; subsequent persecution increased his fol-

lowers; the immediate cause of his execution was, his pretending to cure one of the royal family by prayers, and laying on of hands, dismissing the physicians, when the patient died under his exorcisms; this sect branched from that of the Gnostics.

MANILLA, British frigate, wrecked on the Dutch coast, Jan. 30, 1812.

MANILLA, the principal of the Philippine islands belonging to Spain; subject to earthquakes, one of which levelled a mountain in 1617; in 1635, a large part of the city of Manilla was levelled by one, and 3000 persons perished; taken by the English 1757; again in 1762; by storm, when it was ransomed, but the larger portion of the money was not paid; free trade to, admitted by Spain, 1783; dreadful fire at, Oct. 1799.

MANHEIM, first built, 1606; made the court residence, 1719, but in 1777 the court removed to Munich; battle of, between the French and Allies, May 30, 1793; surrendered to General Pichegru, Sept. 20, 1795; Kotzebue the dramatist assassinated at, April 2, 1819.

MANNER of Living, English; 1500, Erasmus, says they are regardless concerning the aspect of their doors and windows to the east, north, &c. They build their chambers so, that they admit not a thorough air; they glaze a great part of their sides with small panes, designed to admit the light and exclude the wind; these windows are full of chinks, through which enters air, which, stagnating in the room, is more noxious than the wind. The floors are usually of clay, covered with rushes that grow in fens, so slightly removed now and then, that the lower part remains for twenty years together, and is a collection of filthiness not to be named. Hence, upon change of weather, a vapour is exhaled, very pernicious, in my opinion, to the human body. Add to this, that England is not only surrounded by the sea, but in many parts is fenny,

and intersected with streams of brackish water; and that salt fish is the common and favourite food of the poor, 1510; glass windows rare before 1535; copyholders and poor people had none before the civil wars, 1640.

MANNING, said to have been a spy from Oliver Cromwell, executed abroad, 1655.

MANNO, S., burned in Smithfield for heresy, 1512.

MANORBEER Castle, Pembroke-shire, built, 1088.

METEOR, a surprising one seen, March 19, 1718.

METEORIC Stones, or aerolites, substances that fall occasionally from the atmosphere; no satisfactory account has been given where they are formed; some of them have been in large masses. There is in the library of Colmar a stone which fell at Ensisheim in Alsace, 1492, which weighed 260 lb. In 1581, a stone 30 lb. weight fell in Thuringia, so hot that no person could touch it. In 1668, two stones, one 300 lb. and the other 200 lb. weight, fell near Verona. In 1751, two masses of iron, of 71 lb. and 16 lb., fell in the district of Agram, the capital of Croatia; the larger is in Vienna. Several specimens of meteoric stones, which have fallen from the atmosphere at different times, are in the British Museum, as well as knives of the Esquimaux, which were brought home by Captain Ross, said to be made of meteoric iron. A sword, stated to have been made of meteoric iron, was presented to the Emperor Alexander. Philosophers have differed as to the

formation of these stones; some have thought them rapidly formed by an unknown process in the atmosphere; others that they were projected from the volcanoes of the moon; and a third class, that they are the fragments of a larger planet which formerly existed between Mars and Jupiter, and of which the four planets, Ceres, Pallas, Juno, and Vesta, are the remaining fragments. M. de la Grange thinks that they are ejected from the interior of our globe by volcanoes, situated in the polar regions, which produce, at the same time, the phenomena of the northern lights. The following are recorded to have happened since the commencement of the present century. A great fall took place at Aigle, April 26, 1803; they were about three thousand in number, and the largest weighed about 17 lb. A stone fell near Eggenfelde in Bavaria, weighing $3\frac{1}{2}$ lb., Dec. 13; two stones fell at St. Etienne and Valence, one of them weighed 8 lb., Mar. 15, 1806; a stone weighing $2\frac{1}{2}$ lb. fell near Basingstoke in Hampshire, May 17; a stone of 160 lb. fell at Fimochin, in the province of Smolensko in Russia, March 13, 1807 (June 17, according to Lucas); a great shower of stones fell near Weston in Connecticut; masses of 20 lb., 25 lb., and 35 lb., were found, Dec. 1; stones weighing 4 lb. or 5 lb. fell near Stannern in Moravia, May 22, 1808; stones, some of which weighed about 2 lb., fell in Caswel county, North America, Jan. 30, 1810; a great stone fell at Shahabad in India, it burned five villages, and killed several men and women; a stone weighing 71 lb. fell in the county of Tipperary in Ireland, Aug. 10, 1810; stones fell at Mortelle, Villeraï, and Moulinbrulé, in the department of Loiret, one of them weighed 40 lb. and the other 30 lb., Nov. 23; a stone of 15 lb. fell in the village of Konglinbowsh, near Romea, in Russia, Mar. 12, or 13, 1811; a shower of stones fell

near Thoulouse, April, 10, 1812; a stone, the size of a child's head, fell at Erxleben, a specimen of it is in the possession of Professor Haussman of Brunswick, April 15; stones fell at Cutro in Calabria, during a great fall of red dust, Mar. 14, 1813; a stone fell near Bucharest in Russia, Feb. 3, 1815; stones, some of which weighed 18 lb., fell in the vicinity of Agen, Sept. 5; there is reason to think that masses of stone fell in the Baltic after the great meteor of Gottenburgh, May 2 and 3, 1817; a great stone appears to have fallen at Limoges, but it was not disinterred, Feb. 15, 1818; a stone of 7 lb. fell at the village of Slobodka, in Smolensko; it penetrated nearly sixteen inches into the ground; it had a brown crust with metallic spots. The late Major Topham published a particular account of a stone, which fell near his house, in the wolds of Yorkshire, that he found had penetrated deeply into the earth, and was warm when taken up, 1798.

METHODISM began by the followers of Whitfield and Wesley in 1739.

METHODISTS, a sect, or sects, one part professing Calvinistic, the other Arminian doctrines; the foundation of the sect began at Oxford about 1729, and in 1734 John Wesley and George Whitfield began to preach openly, wherever a congregation could be assembled to hear them, which was considered a scandal by the Church of England, in the pale of which they at first professed to instruct; the Methodist missions commenced in 1769, and two were sent to North America; missions reduced to a system, and a society organised for their support, 1817; in 1767, the number of itinerant preachers was no more than 92, and the number of their societies, 25,911; in 1795, the number of their preachers was 357, and the members, 83,368; at a later period, 1827 and 1828, their number was estimated at 211,887

in England; 22,760 in Ireland; 36,917 in foreign nations, exclusive of America, or in all about 700,000; their preachers in the American connexion, in 1827, were 1576; in foreign stations, 172; in Ireland, 145; in England, 829; total, 2722; since which they have increased considerably. In England and Wales they map into 296 circuits, and claim about one in fifty-six of the total population as members of their community; in 1839, the methodists reckoned 3290 ministers, and 740,459 members.

METHODISM in the United States of America: the Methodist General Conference resolved in 1839 to send delegates to England in 1842, and one to Canada in 1841. During the four years ending Sept. 1840, 515 ministers, and 89,781 church members, were added to this denomination. Since that account was made, the increase is ascertained to be 14,000, making the whole addition 103,781, according to transatlantic statements.

METENS, James, of Antwerp, gave the first idea of telescopes, 1611.

METTINGHAM College and Castle, built in Suffolk, 1335.

Mews, Charing Cross, Westminster, built 1732, so called from the French *mu*, a cage for hawks, a proper appellation for the place at Charing Cross, where this aviary once existed; but when its designation was altered, and it became a receptacle for the "royal stud," nothing could be more improper than the retention of the name.

Mexico discovered, 1518; conquered, and brutally ravaged by the Spaniards, 1521; mint established in, 1535; struggle for its independence, 1818; Iturbide made emperor, May, 1822; a constitution proclaimed by Vittoria, 1823; Iturbide shot, 1824; commercial treaty with England, April, 1825; the expulsion of all Spaniards from, March, 1829; the expedition from old Spain against, defeated, Sept. 28,

1829; revolution in, and Guerrero deposed, Dec. 23, 1829; independence of, generally acknowledged, first by the European nations, and lastly by Brazil, June, 1830; war with the United States, June 4, 1845; defeat of the Mexicans at Palo Alto, May 8, 1846; Santa Fe taken, Aug. 25; Monterey, Sept. 1846; the Mexicans defeated, Feb. 22, 1847; again, April 18, 1847; treaty between Mexico and the United States, May 19, 1848.

MILITARY Establishment of the Line, of England, 1849, 113,847, exclusive of India, yeomanry, and militia; ordnance, 15,582.

MILITARY Establishment of France, 1853; men of all arms in France, 375,000, except gens-d'armes; voted for 1854, 358,513 men, 83,393 horses.

MILITARY Academy, Woolwich, established, 1741.

MILITARY Asylum began, June 10, 1801.

MILITARY, Mortality of, in war, from 1808 to 1815, in the armies of the Duke of Wellington only, in six years, in the campaign of 1808, 69 officers and 1,015 men; 1809, 243 officers and 4,688 men; 1810, 78 officers and 924 men; 1811, 459 officers and 7,384 men; 1812, 816 officers and 11,030 men; 1813, 1,025 officers and 14,966 men; 1814, 400 officers and 4,791 men; 1815, 717 officers and 9,485 men. Total, 3,807 officers and 54,283 men killed or wounded. This total does not include the Brunswickers, Hanóverians, Portuguese, nor Spaniards. It is remarked, that at Salamanca, the proportion of the killed to the combatants was 1 to 90; at Vittoria, 1 to 74; Waterloo, 1 to 40; while at the battle of the Nile, the ratio

was 1 to 36; at Trafalgar, 1 to 41; at Copenhagen, 1 to 39. Hence naval battles are more sanguinary than military battles. In the above statement the losses in Holland, under the Duke of York, in Egypt, and in various parts of the world, are not included. In 1783, the returns of private men killed, or who died of their wounds, in America, up to the peace of 1783, was 43,633 men, exclusive of officers. The Prince of Hesse also received head-money after the peace, Dec. 23, 1786, for the killed off soldiers whom he let out, £471,000, equivalent to 13,500 men and upwards, at £30 per head; hence Lord Chatham's allusion to the "shambles" of the German despots.

MILITARY Mortality from disease in Africa, at the Gambia, Sierra Leone, and the Isles de Los, from the year 1819 to 1836, in 18 years one-half of the troops died annually; in 1835 and 1836, three-fourths of the white troops in the settlements died; of 220 men who arrived in May 1825 in the Gambia, 87 had died before the end of September, and in Dec. 31 only 29 remained.

The mortality of the men is double that of the officers.

MILITARY Mortality in France, from 1820 to 1826 inclusive, ex-

cluding the year 1823, the mean strength of the French army was 120,624; the mean annual number of deaths was 2352, making the ratio of mortality per cent. 1.94—

Classes.	Strength.	Mean annual number of deaths.	Ratio of mortality per cent.
Non-commissioned officers .	24,408	266	1.08
Drummers	3,917	34	.8
Musicians	918	14	1.5
Labourers	383	2	.8
Privates	90,978	2036	2.2
	120,624	2352	1.94

The non-commissioned officers and the drummers obtain higher pay than the privates, and enjoy a comparative immunity from night duty. In the 'Royal Guard,' in which the pay is higher and the duty lighter, the ratio of mortality per cent. is but 1.4. In this body the difference of mortality, according to rank and occupation, is also found. Among the non-commissioned officers it is, per cent., .9; drummers, .5; musicians, .8; privates, 1.7.

MILITIA, a species of militia was enrolled by Alfred the Great about

900; the first commission of array to form the militia, 1422; the present militia founded on acts of Charles II., 1661 and 1663, and afterwards in 1757, 1764, 1781, 1797, and 1852; supplementary militia, 1797; the number, 104,000 in 1800, united to 106,000 in 1798; a clause was introduced to allow courts-martial to introduce imprisonment in place of flogging, 1811; Irish militia interchanged with England, March 28, 1804; strength of militia, 1852, 56,746 men.

MILK consumed in London, 1827,

about 7,884,000 gallons annually, at a cost of £656,000. In 1825 a company established to sell pure milk.

MILLINER, a seller of ribands and female dresses; men milliners censured in the Society of Arts, 1810.

MILTON Abbas abbey founded, 933.

MILTON, John, the great epic poet of England, and Latin secretary to Oliver Cromwell, born 1608, died 1674, interred at St. Giles, Cripplegate. Milton did not begin to write *Paradise Lost* until he was 47 years of age. He sold it for £5 to Samuel Simmons, April 27, 1667. In two years more, he had £5 for the second edition. In 1680, Mrs. Milton sold all her right for £8. Simmons then sold the copyright for £25. It is an extraordinary fact, that Milton had a great difficulty in getting the book licensed. Dr. Bentley, the first editor of the *Paradise Lost*, got 100 guineas for his edition. Dr. Newton, the next editor, got £630 for the *Paradise Lost*, and 100 guineas for the *Regained*. It was an extraordinary misjudgment of the celebrated Waller, who speaks thus of the first appearance of *Paradise Lost*:—"The old blind schoolmaster, John Milton, hath published a tedious poem on the Fall of Man; if its length be not considered a merit, it has no other."

MILTON, Great, Oxfordshire, sixteen houses burned at, July 4, 1762.

MINDEN, Battle of, fought Aug. 1, 1759, between the French and the allied English, Hanoverians, and Hessians, under Prince Ferdinand, when the latter gained a complete victory; for his conduct while commanding the horse in this battle, Lord George Sackville was tried by a court-martial and dismissed the service, but restored afterwards on the accession of George III. to the throne, 1760.

MINES, numerous in England; those of tin worked many years before Christ; those of tin, copper, lead, iron, and other metallic products, valued at £10,547,000 per

annum; the claim of a mine royal enforced 1362; Irish mines said to produce silver, 1276; the copper of Cornwall one-third, and that of tin nine-tenths of all produced besides in the rest of England and the Continent of Europe.

MINES of Gold and Diamonds discovered in the Brazils, Oct., 1752.

MINES, those called the Consolidated, in Cornwall, in 1840, extended 55,000 fathoms, or 63 miles under ground, at a cost of £300,000, and the great Cornish adit extends from sea to sea, with its branches running 30 miles 413 feet beneath the surface of the ground.

MINES, Royal, established, 1565.

MINES, England and Wales, persons engaged in working, 173,268; Scotland, 20,557; total, 193,825; in Ireland, 3096; tons of iron produced from 121 furnaces in England and Scotland, 124,879 in 1796; in 1823,

MINSTER at York set on fire by a lunatic, named Martin, Feb. 2, 1829; completely restored and opened, May 6, 1832.

MINORCA taken by General Stanhope, Aug. 1708; surrendered to the French 1756; given up to England 1763; retaken by the Spaniards 1679; ceded to Spain 1783; taken by the English, Nov. 15, 1798; given up to Spain 1802.

MINOTAUR, of 74 guns, wrecked upon the Back Sand, on the Dutch coast, when 480 of the crew perished, Dec. 20, 1810.

MINSTRELS, originally players on pipes for the amusement of feudal lords and their households: they are not to be confounded with the bards or poets, who were of older

date, and whose compositions they often sung and played, succeeding the Saxon glee-men; John of Gaunt had a court of them at Tutbury, 1380; they continued until 1560; and after that period sunk into neglect.

MINT, this establishment was appended to a public treasury near the Tower, as is supposed, about the year 400, before the Romans quitted the island; an ingot of silver was found in 1777 in the old foundation of the ordnance office in the Tower—*Ex Officio Honorii*; with some gold coins of the reign of Arcadius and Honorius; the shape was square, with the four corners, extended out of the straight line, so as to render the four sides a jagged curve;

its proper name is a skillet, and forms a proof of the preparatory operations of the monetary systems of the Romans, to whom the art of coining was then familiar, though of considerably less exactness than that of modern times: they had mints at Rome, Constantinople, York, and London; they were found at a great depth below the artificial stratum, which consisted of almost impenetrable foundations of flint, and cement equally hard. Dr. Hunter had in his collection one of these coins. One of them had the impression *Aug. G. G.*, and denoted its date to be A. D. 420; Athelstan first regulated the mint, at a later period, 928, and there were also provincial mints; the mint office in the Tower was established, 1065; the mint was kept by Italians, 1278, from the native ignorance of its management; the workmen were formed into a corporation by Edward III., about 1343, when the first entry of gold for coinage occurs: tin coined by Charles II., 1684; gun-metal and pewter, by James II.; the present building erected between 1806 and 1810, for which the sum of £262,000 was voted by parliament; a new constitution of the mint 1815, and a second change and re-arrangement between 1841 and 1850.

MINT, the, a notorious district in Southwark, Surrey, once used as a place of refuge for debtors; suppressed under George I., about 1717.

MIRRORS, or Looking-Glasses, anciently of metal, first made at Venice of silvered-glass, 1300, and in England at Lambeth, 1673.

MISSISSIPPI Scheme, exploded in France, June, 1720, the pattern of the South Sea scheme in England; it was the idea of a Scotchman named Law, who promised to lend the French government 15,000,000 francs, without levying a penny in taxes, by which means the government was to get rid of heavy debts; the sum of £100,000,000 is said to have been lost by individuals, and

thousands were ruined by the scheme, who had taken Law's paper for their gold.

MISSISSIPPI Trade began in England, Nov. 28, 1716.

MIST, a notorious printer, committed to Newgate for a libel, by the House of Commons, although at the same time a prisoner for debt in the King's Bench, June 3, 1721.

MITCHELSTOWN, Ireland, a number of young persons meeting in a barn to celebrate a wedding, it took fire, and the bride with 20 other persons was burned to death, Feb. 12, 1816.

MITRE, a cap belonging to popes and bishops, in imitation of that worn by the high-priest among the Jews; the pope has four, differently formed according to the ceremony that demands them; the cardinals wore mitres until 1245, when they were appointed to wear hats by the council of Lyons.

MITTAU, in Courland, the ducal palace of, destroyed by fire, Dec. 21, 1788.

MITYLENE, island of, in the Greek Archipelago, with 2000 houses, destroyed and ravaged by an earthquake, May 27, 1755.

MOCKERN, battle of, between Eugene Beauharnois and the French, and the allied Russian and Prussian army, which was defeated with much loss, April, 1813; a second battle, and yet more sanguinary, Oct. 4, 1813.

MODENA made a duchy, 1451; the prince of, arrived in London, Oct. 16, 1735; surrendered to the king of Sardinia, June, 1742; prince of, pensioned by the Austrians with 90,000 florins, 1753; taken by the French, 1796; incorporated with the Cisalpine republic, 1797; Francis of Este restored to, 1814; insurrection at, and flight of the duke, Feb. 5, 1831; afterwards occupied by Austrian troops.

MODERN Languages, professor of, appointed in the English universities in 1724, by George I.

MOGUL Empire in India, conquer-

ed first by the celebrated Jenghis Khan, a Tartar prince, who died 1236; Timor Bey became Great Mogul by conquest, 1399; the throne continued in his descendants; Kouli Khan invaded it, and carried off enormous treasure into Persia, March 7, in 1834; at length Delhi and the Mogul empire fell into the hands of the English, in the present century.

MOHATZ, Battle of, between the King of Hungary and the Turks under Solyman II., when the former was defeated, with the loss of his life and 22,000 men, 1526; a second battle here, 1687, in which the Turks were defeated with the loss of 10,000 men, by Prince Charles of Lorraine.

MONABOCH, the first sole, in England, 828.

MONASTERIES, the first founded where the sister of St. Anthony retired, 270; monks first associated, 328; the first founded in France near Poitiers by St. Martin, 360;

number of triars and nuns to Ephesus, ordered them to change their black habits for white, and to destroy their images; on their refusal, he ordered their eyes to be put out, banished them, and sold several of their monasteries, appropriating the produce, 770.

MONASTERY, the first in England, 596; 27 built by Edgar, 959; deprived of their privileges, Oct. 6, 1275; lent the king money for his wars, 1314; suppressed by Wolsey to endow Ipswich and Christ Church, Oxford, 1525; suppressed to endow Eton and King's College, Cambridge, 1528; the lesser united, 1528; observant suppressed by Henry VIII. 1534; 321 suppressed, to the value of £32,000 per annum, 1535; 21 suppressed and 121 resigned their charters, above £100,000 taken from them, 1538; in all 645, of the yearly value of £161,000 of money of that time, seized by Henry VIII., and his act confirmed by his parliament, 1540.

MONASTERIES, Irish, in 1537, 1538, and 1541, acts of Parliament were passed for the suppression of religious houses in Ireland; and during the reigns of Henry VIII., Edward VI., and Elizabeth, all the abbeys, monasteries, priories, convents, &c., were abolished; their extensive lands and endowments were seized by the crown, and the abbey and church lands, and Erenach lands, all of which were denominated Termon lands, were conferred in large grants, chiefly on the nobility of the country. Numerous colleges, seminaries, and schools attached to the abbeys, were suppressed, and likewise the hospitals and biatachs. The biatachs were charitable institutions or houses of hospitality, numerous in all parts of the country, and it is estimated that there were at least two thousand of them throughout Ireland, one or more generally in every parish. They were generally erected at cross-roads, always well supplied with

provisions, and meat kept ready cooked for all comers.

At the Reformation, there were in Ireland the following 563 monasteries:—

Abbeys and Priories of Augustinians, Canons, and Canons regular, Aroasians, and Victorines	223

Convents of Carmelites or White Friars	20
A Priory of Culdes at Armagh	1

MONEY first mentioned as a medium of commerce in the 23rd chapter of Genesis, when Abraham purchased a field as a sepulchre for Sarah, in the year of the world 2139: first made at Argos, 894

b. c.; changed eighteen times in value from 1290 to 1789, and 12 times its value from 1530 to 1789. Silver increased 30 times its value since the Norman conquest; a pound in that age was 3 times the quantity that it is at present, and 10 times its value, in purchasing any commodity. About the year 900, King Alfred left to each of his daughters £100 in money. In 1221, Joan, eldest daughter of King John, upon her marriage with Alexander King of Scotland, had a dowry of £1000. In 1278, Edward I. gave with his daughter Joan, contracted to the son of the King of the Romans, 10,000 marks sterling, and this to be returned in case the Prince died before her. In 1314, Elizabeth, wife of Robert Bruce, King of Scotland, being imprisoned in England, was allowed for herself and family 20s. a week. In 1330, Joan of Oxford, nurse to the Black Prince, had a pension of £10 per annum; and Maud Plumpton, a rocker, had 10 marks. In 1351, workmen were to take their wages in wheat at 10d. the bushel. In 1402, the salary of the Lord Chief Justice of the King's Bench was £40 a year. In 1408, the Lord Chief Justice of the Common Pleas had 55 marks per annum. In 1545, the Chief Justice of the King's Bench had an addition of £30 made to his salary, and the Justices of £20.

MONEY, no declaratory statute to prevent its being raised for the king's use without the consent of parliament or states, until 21 Edw. I., in the 13th century.

MONK, the first, said to have been Paul of Thebais, who fled into the deserts to avoid the Dacian persecution, 260; some contend that St. Anthony was the first who led a regular monastical life, at Mount Colzim, near the Red Sea, 305; after this period the monks began to associate, and to form orders; Athanasius is said to have introduced the monastic life into Rome, in 341; in 360 it was begun

in Egypt and Persia; the former country soon had no less than 96,000 of the brotherhood, according to some authorities.

MONK, George, a colonel in the army of Charles I.; taken prisoner by Fairfax, and sent to the Tower, Jan. 21, 1648; went over to the parliament, and took Stirling castle, Aug. 14, 1651; entertained at Edinburgh, 1654; submitted ostensibly to Richard Cromwell, 1658; betrayed the protector, 1659, and was made commander in chief of the forces of Charles II., Feb. 1660; master of the horse to Charles II., and Duke of Albemarle, July 1660; commanded the fleet against the Dutch, June 1, 1666; defeated the Dutch, who lost twenty ships of war and four admirals, July 25-6, 1666; died Jan. 4, 1669.

MOORFIELDS, London, levelled, 1614, and planted, 1640; division walls taken down, 1754.

MOONS, their first invasion of Spain, 173; expelled finally from Spain by Philip III., who issued an edict to that effect, 1620, after continuing 900 years in that country, because they endeavoured to free themselves from the barbarous power of the Inquisition confiscating all their property; their number was 900,000; their power having previously been broken by Alphonso I., king of Navarre, 1118, they sought refuge in Granada and founded a kingdom there, 1238;

Alphonsus VI., of Leon and Castile, defeated and slew a vast number of them in 1347; at last Ferdinand V. took Grenada in 1492, and Philip expelled them.

MOORGATE, London, taken down and sold for £166, in 1761.

MORAVIANS, a religious sect founded in Moravia, or rather ravived there by Count Zinzendorf, in 1722, is well known. In ancient records they are known by the title of *Unitas Fratrum*, or United Brethren. In the year 1750, Count Zinzendorf formed an establishment at Chelsea, and hired a plot of ground to erect a large building for the reception of 300 Moravian families, to carry on a manufactory; and he purchased the Duke of Ancaster's old mansion, called Lindsey House, and of Sir Hans Sloane, a piece of land, part of the gardens of Beaufort House, for a burial-ground, together with the stables belonging to that old mansion; and a slip of ground as a carriage way from the stables, which they intended to make their chapel to Lindsey House. He took a long lease of 99 years, from Sir Hans Sloane, of most of the remaining site of Beaufort House. The chapel was fitted up, but the settlement failed; Lindsey House was, however, inhabited by some of the society. Count Zinzendorf himself lived there, and presided over the community as long as he dwelt in England. He also visited America, and there established more particularly in the town of Bethlehem, a very flourishing settlement of Moravians, the females of which are employed in the education of their own sex, and the men in different manufactories; the Count died at Chelsea, June 7, 1760; his followers are peaceful and persevering, forming settlements in various parts of the world: the Moravians are also called *Hernhuters*.

MORE, Sir Thomas, beheaded for his religious faith by Henry VIII., June 22, 1535.

MOREAU, Gen., mortally wounded,

MORLEY, Lord, tried at Westminster Hall for the murder of Mr. Hastings, April 1666, and convicted of manslaughter.

MORNING Chronicle, daily morning paper, sold for £40,000, 1823.

MOROCCO, Empire of, anciently Mauritania, first known 1008. Possessed by the Romans, 25 B.C., and reduced by them to a province, 50; from this time it underwent various revolutions, till the establishment of the *Almoharides*; the second emperor of this family built the capital, Morocco. About 1116, Abdallah, the leader of a sect of Mahometans, founded the dynasty of *Almahides*, which ended in the last sovereign's total defeat in Spain, 1312. At this period Fez and Tremecen, then provinces of the empire, shook off their dependence. Morocco was afterwards seized by the king of Fez, but the descendants of Mahomet, about 1550, subdued and united again the three kingdoms, and formed what is at present the empire of Morocco.

MORPETH Castle, Northumberland, built about 1230; tower of, burned by the inhabitants, from hatred to King John, 1215.

MORTALITY of all England. In 1821, this had decreased nearly one-third in 40 years: in 1841, the mortality was one in 46 of the population, or 2.238 for males, 2.083 females; mean, 2.160.

MORTALITY of all France; the rate of mortality among the whole inhabitants of France is higher than that of the United Kingdom, 1844. In France, the rate of mortality among persons of both sexes at twenty-four years of age, which is about the mean age of the French army, is 1.3 per cent. The mean rate of mortality among males between the ages of twenty and thirty, in a number of the departments of France, has been found to be 1.25 per cent.

MORTALITY in the Metropolis, about the average proportion per thousand between the years 1831 and 1841; out of a thousand registered deaths which have occurred:—

In the years 1838, 1839, 1840, and 1841, out of the registrar-general's 11 districts, viz., the metropolis, No. 1; South Eastern, No. 2; South Midland, No. 3; Eastern, No. 4; South Western, No. 5; Western, No. 6; North Midland, No. 7; North Western, No. 8; York, No.

9; Northern, No. 10; and Welsh, No. 11; the mortality ran, according to the following arrangement of the above numbers, from the greatest to the least, 8, 1, 9, 6, 10, 7, 3, 4, 11, 2, 5, Cheshire and Lancashire ranking No. 8; Metropolis, No. 1; York, No. 9; Surrey, Kent, Sussex, Hants, Berks, as No. 2; and Wilts, Dorset, Devon, Cornwall, Somerset, as No. 5, with the least proportional mortality. The counties from Kent to the Land's End, along the southern coast, seem therefore to be healthier than the northern, perhaps from the mildness of the climate.

MORTALITY of Foundlings; in 1833 there were received into the Foundling hospital at Paris, 4803 children, of which 1751 came from the Lying-in hospital, and 281 from other hospitals. Of these, 1259 (one-fourth) died in the hospital before they could be put out to nurse. In London, of 52,150 infants received at the Foundling hospital in 30 years, 14,613 died infants; 25,859 were returned dead from the country, where they had

been sent to be nursed, and only 10,626 escaped, for 730 besides died in the infirmary, and 332 when become grown children.

MORTALITY in Hospitals; the returns from St. Bartholomew's hospital embrace a period of fifty years, divided into quinquennial periods: there is only a difference of $\frac{1}{3}$ per cent. between the deaths in the first period and the last. From 1790 to 1794, the average number of deaths per cent was 7.76; from 1825 to 1830, they were 7.25. In two other London hospitals, the cures were less; at two country ones, very much greater. Taking the average of five years, ending in 1833 and 1834, the proportion of deaths at the London hospital was 11.44 per cent., at St. George's, 11.19 per cent., at the Manchester Infirmary, 7.16 per cent.; and at the Liverpool Infirmary, only 5.57 per cent.

MORTALITY in Towns; the following table shows the number of deaths, as compared with that of the inhabitants, at distant epochs, in the principal towns of Europe.

Paris	. in . .	1650	1 in 25	inhabitants; in 1829	1 in 32
London	" . .	1690	1 24	" 1828	1 55
Berlin	" . .	1755	1 28	" 1827	1 34

Petersburg	" . 1768	1 28	"	1828	1 48
Stockholm	1758—1763	1 19	"	1827	1 26

The annual mortality has thus diminished in Paris more than one-third in 179 years; in London, more than one-half in 138 years; in Berlin, one-fifth, or nearly one-fourth, in 72 years; in Geneva, three-fifths in 261 years; in Vienna, one-fourth in 80 years; in Rome, one-half in

63 years; in Amsterdam, one-sixth in 63 years; in Cambridge, two-fifths in 10 years; in Norfolk, one-fifth in 10 years; in Manchester three-fifths in 64 years; in Birmingham, nearly three-fifths in 10 years; in Liverpool, one-half in 38 years; in Portsmouth, more than one-

third in 11 years; in Petersburg, nearly two-thirds in 40 years; and in Stockholm, more than one-third in 67 years.

MOUNTAINS, height of the different mountains of the world; that of the Alps in Europe is the highest range, then the Pyrenees; those of America excel the European, and the Himalaya in India rise to the loftiest altitude of all.

MOUNTAINS, the principal, the Alps in Europe, the loftiest of which, Mont-Blanc, had not been ascended before 1785; between which year and 1825 there were six ascents, since then they have become frequent:—

1. Dr. Paccard from Chamouni, Aug. 8, 1786.
2. M. Saussure from Geneva, Aug. 3, 1787.
3. Baron Doortheser and M. Forneret, Aug. 10, 1802.
4. Count Mateszski, Aug. 4, 1818.
5. Dr. Renselaer and Mr. Howard, July 12, 1819.

By Englishmen about the same period:—

1. Colonel Beaufoy, Aug. 9, 1787.
2. Mr. Woodley, Aug. 5, 1788.
3. Captain Undrell, R. N., Aug. 13, 1820.
4. Mr. Clissold, Aug. 18, 1822.
5. Mr. Jackson, Sept. 4, 1823.

MOURNING, a particular colour of dress worn for the dead; in Europe, generally black; in China, white; in Turkey, violet; in Spain, white before 1498.

MOUSQUETAIRES, or Musqueteers, regiments of distinction, so named under the Bourbon dynasty, and first levied by Louis XIII., 1622; the first levy was disbanded in 1646, and restored in 1657; a second body, raised in 1660, composed Mazarine's guard; there was also a body subsequently formed, called the Black Musketeers.

MUGGLETONIANS, a sect that sprung up in the time of Charles I., whose leader was a tailor's journeyman, named Ludovic Muggleton, 1657; he set up for a prophet, and had pretended revelations; they asserted that God, the Father, had suffered

death, and that Muggleton and an associate named Reeves, were the two last witnesses who should appear to call men from their sins before the end of the world; they had many followers.

MUGHOUSE Riot, a tumult in Salisbury court, Fleet street, for which five persons were hung, July 23, 1716.

MULBERRY Trees, the first planted in England, at Sion House, 1609; a celebrated mulberry tree at Stratford-on-Avon, planted by Shakspear, under which Garrick, Macklin, and others, were entertained in 1742; it was cut down by a person named Gastrel for fuel, but the wood was saved by a silversmith, who purchased it, and manufactured it into various articles in memory of the poet.

MUM, a liquor brewed from wheat in place of barley, much used in Germany, and greatly at Brunswick, where it is said to have been first made in 1489.

MUMFORD, Mr., murdered near Quendon, in Essex, by Pallet, a labourer who worked for him, on the 4th Dec., 1823; the murderer was discovered, and afterwards executed at Chelmsford.

MUNICH, Palace of, destroyed by fire, April 5, 1749, and again with 200 houses April 28, 1762.

MUNICIPAL Expenditure of Boroughs: the receipts and expenditure of the larger boroughs, from Sept. 1, 1842, to Aug. 31, 1843, was as follows, omitting shillings and pence:—

	Receipts.	Expenditure.
	£	£
Bath	22,040	19,981
Birmingham.....	41,613	24,716
Bristol	45,899	49,176

MURK in a criminal court, refusing to plead, to be taken as a plea of guilty, by 12 George III., and execution to follow: of this practice there were cases in 1778, 1792, and 1801; before this act, persons re-

fusing to plead were tortured to death, being placed naked on their backs in a dark dungeon, a great weight of iron placed on their bodies, and fed with three morsels of bad bread, and the same number of draughts of stagnant water, until they died, the bread and water on alternate days: one among many relics of Saxon barbarity, swept away in the last and present centuries, exemplifications of the humanity and "wisdom of our ancestors."

MUTINY Act passed 1689, 2 William III.; renewed annually

MUTINIES on board the Bounty, 1789; a ship commanded by Captain Bligh, a very arbitrary officer; on board the Fleet, April, 1797, demanding an advance of wages; quelled by a promise from the Admiralty which was not fulfilled; at Plymouth, of the marines, June 1797, four shot, which occasioned a re-commencement on board the London man-of-war, when Admiral Colpoys and his captain were put into confinement for ordering the marines to fire, whereby three lives were lost. The mutiny subsided May 10, 1797, when an act passed to raise their wages, and the king pardoned the mutineers. A more considerable one at the Nore, which blocked up the trade of the Thames: it subsided June 10, 1797, when the principal mutineers were put in irons, and several were executed; the Danae frigate, taken into Brest by her crew, 1800; in the fleet in Bantry Bay, 1807; at Malta, where the mutineers blew themselves up with a powder magazine, 1807; at Vellore, 1807.

used to aid in the computation of numbers, so that the multiplication and division of high numbers may be easily performed by them, invented by Napier, baron of Merchiston, the inventor of logarithms, 1617.

NAPLES, Kingdom of, at present ruled by the last of the Bourbon race in the enjoyment of royalty; great part of the country anciently held by the Etruscans, who built Nola and Capua, formerly called Capua and Campania; it has undergone many changes and revolutions: it was distinguished subsequently from the kingdom of Puglia, governed first by Roger, Count of Sicily, 1127; the Goths were once masters of Naples and Sicily, but were driven out by Belisarius, 537; the Lombards were the next possessors, and were dispossessed by Charlemagne in 800; in 1266, Charles of Anjou, brother of St. Louis, king of France, obtained the crown from the pope to the exclusion of the rightful heir, Conradin, who was beheaded, aged 16 years; the French becoming hated by the Sicilians, a general massacre of the invaders took place, one Frenchman only escaping, March 30, 1282; Peter of Arragon reigned 1282; the two crowns disjoined, 1303; Charles Durazzo became king of Hungary, murdered there by order of the queen regent, in her presence, 1386: for this murder she was taken out of her carriage and drowned in the river Bosseth, 1386; Sicily united to Naples, and the kings since called kings of the Two Sicilies, 1442; taken from the French and annexed to Spain, 1504; the tyranny of the Spaniards led to an insurrection, excited by Masaniello, a fisherman, who in fifteen days raised 200,000 men, 1647; this insurrection subsided, and Masaniello was murdered, 1647; attempt

of the Duke of Guise to possess the crown, 1647; the kingdom completely conquered by Prince Eugene, 1707; Naples ceded to the Emperor, by the treaty of Radstadt, 1714; Sicily in 1720; both kingdoms recovered by the crown of Spain, 1734; Charles, the son of Philip of Spain, reigned, 1735; reign of Ferdinand IV., 1759; his flight on the approach of the French republicans, Jan. 14, 1799; Nelson appeared, Naples retaken, and the king restored, July 13, 1799; again taken by the French, April 7, 1801; earthquake felt throughout the kingdom, and thousands perished, July 26, 1805; treaty, offensive and defensive, between France and Naples, Oct. 8, 1805; Ferdinand again driven from Naples, and Joseph Bonaparte crowned king, Feb. 6, 1806; Joseph abdicated for the crown of Spain, June 1, 1808; the crown transferred to Joachim Murat, July 1, 1808; a new constitution granted to Sicily, 1812; Naples surrendered to a British fleet, and Ferdinand re-entered, June 17, 1815; Joachim Murat shot, Oct. 15, 1815; revolutionary movement, headed by General Pepe, July 15, 1820; suppression of the Carbonari, Sept. 16, 1820; death of Ferdinand IV., who reigned 66 years, and reign of Francis I., 1825; reign of Ferdinand II., Nov. 8, 1830; commencement of the dispute relative to the sulphur monopoly, afterwards amicably adjusted, March 15, 1840; Palermo and the great towns of Sicily in open insurrection against the king of Naples: the people proclaimed a provincial government, and insisted on having the constitution of 1812, Jan. 12, 1848; a constitution modelled on the French charter of 1830, proclaimed Jan. 29, 1848; bombardment of Messina, April 13, 1848; fighting at Naples, between the troops and national guard, May 15, 1848; Messina bombarded for five days, by the Neapolitans, and taken, Sept. 7, 1848; blockade of Palermo,

April 30, 1849; entered by the Neapolitans after much fighting, May 13, 1849; and the absolute monarchy re-established.

NAPOLEON I., Emperor of the French, king of Italy, and protector of the confederation of the Rhine, born at Ajaccio in Corsica, Aug. 15, 1769, died at St. Helena, May 5, 1821, aged 52.

NAPOLEON Francis, son of Napoleon Bonaparte, and King of Rome, and styled in Vienna Duke of Reichstadt, born March 20, 1811; died of a decline at the palace of Schœnbrunn, July 22, 1832; Madame Bonaparte, mother of Napoleon, died at Rome, 1832.

NAPOLEON, Remains of, brought from St. Helena, and deposited in the Hotel des Invalides at Paris, 1840.

NARVA, Battle of, between Peter the Great of Russia and Charles XII. of Sweden, Nov. 30, 1700, in which Peter the Great lost 30,000 men, and as many more made prisoners, while the Swedes did not amount to more than 30,000 opposed to thrice as many Russians.

NASEBY, Battle of, between Charles I. and the parliament army under Fairfax; Cromwell, who was present with his iron regiment of horse, turned the tide of the battle, which was decisive, the king, abandoning his baggage, obliged to fly for his life; all his cannon taken, and 5000 prisoners, June 14, 1645.

NATIONAL Benefactors, those who have enriched the garden with useful and valuable plants are deserving of remembrance. Sir W. Raleigh introduced the potato; Sir Anthony Ashley first planted cabbages here; a cabbage appears at his feet on his monument; Sir Richard Weston brought over clover-grass from Flanders in 1645; figs were planted in Henry VIII.'s reign at Lambeth by Cardinal Pope—it is said the identical trees are still remaining; Spilman, who erected the first paper-mill at Dartford, in 1590, brought over the first two lime-trees,

which he planted, and are still growing; Thomas Lord Cromwell enriched the gardens of England with three different kinds of plums.

NATIONAL Debt; though money seems to have been borrowed in the reign of Henry VI., the existing debt of the nation dates no further back than the reign of William III.; it was alarming to the nation in 1697, though only £5,000,000; this monarch left it, at his death in 1702, £16,000,000, that is, on Queen Anne's accession, 1714; on the accession,

of George I. it was £54,000,000
of George II., 1727, 52,000,000
of George III., 1760, 146,982,844.
When the American war was concluded so unhappily, the debt was raised to above £237,000,000; for in

1786, it was £266,725,097, which England paid to lose America, and the interest was £9,536,026; in 1790 it was reduced to £242,000,000, but then there was an unfunded debt of £30,000,000. The war begun for the restoration of the Bourbon family, from 1794 to its end, and money borrowed in 1817, cost in loans £275,313,114, in addition to the previous debt; and £64,750,000 on account of Ireland, with nearly £33,000,000 of Exchequer bills. In one year of the war, 1814, the current taxes added to the loan for that year, carried the expenditure to above £100,000,000 sterling; the interest for the debt coming out of the taxes: the following table will show the amounts of principal and interest down to 1844, for 28 years:

Gold rose afterward from 80s., at which it had been stationary for six or seven years, to 95s. in 1809; to 97s. 6d. in 1811; to 105s. in 1812; and 110s. in 1813, or 29 per cent. above the mint price of 79s. 10½d. per oz., to the great mischief of trade, to remedy which, parliamentary wisdom could find no better refuge than passing an act in the face of the truth, that a note of one pound of the Bank of England and a shilling, were of the same intrinsic value as a guinea in gold, the paper being in fact at 29 per cent discount. Amount and weight of the debt: to pay the national debt, as it stood

in 1786, would require nearly 47,000lbs. weight in £10 bank notes, having 512 notes to one pound. This sum in cash, if put into carts, each containing 1000 lbs. weight, and having two horses to draw, allowing forty feet to each cart, would load 5000 carts, and cover 37 miles in length, with a remainder of 116 carts in the 38th mile. Were it to be laid down in carts in a line, it would extend above 4300 miles in length. In 1794 the national debt was 260 millions, and if a man were to count 100 shillings in a minute for 12 hours a-day, it would take him 1797 years, to prove the

days, 3 hours and minutes. The whole of this sum being 5900 millions of shillings, and the coinage standard being 62 shillings in the Troy pound, its whole weight will be 83,709,968 lbs., which will require 41,936 carts, each to have a ton weight, to convey it to any place; or, supposing a man could carry one hundred pounds from London to York, it would require 838,670 men to perform it; and if all these men were to walk in a line at only one yard distance from each other, they would cover 456 miles and a half, and 70 yards. The breadth of a shilling being one inch, if all these shillings were laid in a straight line, close to one another's edge, the line they would cover would be 83,070 miles, more than double the circumference of the globe.—Query. Is there in the whole universe as much gold in circulation as would discharge this debt? If this is not sufficient, is there as much gold and silver in circulation as would be sufficient for the purpose?

NATIONAL Confederation at Paris, commemorated, July 14, 1790, in Champ de Mars.

NATIONAL Debt of the United States of America in 1790, only £16,000,000, afterwards paid off.

NATIONAL Assembly of France, the States constitute themselves only, June 16, 1789; assembly dissolved itself, Sept. 21, 1792.

NATIONAL Convention of France formed, Sept. 17, and opened in due state, Sept. 21, 1792; it continued in existence until the Executive Directory was installed at the Luxemburg, Nov. 1, 1795.

NATIVITY of the Virgin Mary, celebration of, instituted, 695.

NATIONAL Gallery of Painting commenced by the government, Tisch purchased Mr. Angerstein's in 1801; pictures in May, 1824;

a receptacle called by the above name was opened for their reception in Trafalgar Square, 1827, built by Wilkins.

NAUMBERG, city of, founded, 808.

NAUTICAL inventions and improvements took place, 1302, and better vessels were constructed than before.

NAVAL Engagements, *see* Battles, Naval.

NAVAL Estimates, annually voted under the following heads, 1849: wages, seamen and marines, £1,425,380; victualling, £653,683; Admiralty office, £136,303; Register and Record office for seamen, £9772; scientific branches, £80,395 (£30,000 of which were for two expeditions in search of Sir John Franklin); establishments at home, £140,841; abroad, £25,839; wages at home to artificers, £851,346; abroad, £30,280; naval stores, £1,511,671; improvements—repairs of yards, £688,601; medical stores, £29,000; miscellaneous, £81,547; total, £5,673,658, with half pay, &c.; making £7,068,730 strictly naval, the post-office department, convict service, and army and ordnance transport, raised the total to £7,951,842.

NAVAL Salutes, the compliment paid by ships to each other's flag at sea belonging to different nations, or on entering foreign ports, answered generally by fewer guns; fired also at the presence of royalty, or a commander-in-chief on the spot hoisting his flag; formerly an honour exacted from all vessels in what were called the British seas; the Dutch disputed it, but agreed to submit to the custom in 1673; it was formally assented to by France in 1704.

NAVAL Dress, or Uniforms, regulations of, 1748; blue, faced with white, until altered by William IV. to blue and red; the white facing has since been restored; in the reign of James I., 1609, the six principal masters in the navy wore coats of fine red cloth.

NAVAL Pay, 1626, captain of a first-rate, with from 400 to 600 men, monthly, £14: lieutenants, ditto, £3, 10s.; master, ditto, £4: 13: 9; in a fourth-rate, with from 100 to 120 men, captains, £9: 6: 8; lieutenants, £2, 16s.; master, £3: 7: 6; surgeons, £1, 10s. per month in all rates; the master gunner £2 and £1: 6: 8.

NAVAL Asylum, founded by the Duke of Clarence, 1801.

NAVAL College, Portsmouth, founded, 1720, on Portland Island.

NAVAL Architecture, school of, founded at Portsmouth, 1816.

NAVARINO, the Pylos of the ancients, and the supposed birthplace of the venerable Nestor, situated on an eminence overlooking the vast harbour of the same name. The Turks took it from the Venetians in 1498, and in 1722 built the citadel, defended by six bastions. The Russians took it in 1770.

NAVARINO, Battle of, between the fleets of England, France, and Russia, under Admiral Codrington, and those of Turkey and Egypt, in which the latter were nearly all destroyed, to the number of 30 sail of the line, Oct. 20, 1827; it was the same day of the month on which, 480 years before Christ, Themistocles, with 380 ships, defeated the fleet of Xerxes in defence of Greece at Salamis, when he saved his country; they who preferred the interests of a shortlived policy to the undying interests of humanity, called this victory of Navarino over Eastern barbarians "an untoward event," so was that of Salamis to the Persians; all victories in defence of human rights have been untoward events to the enemies of freedom.

NAVIGABLE Rivers, and Canals to join, made in Eng. by Hen. I., 1130; the Thames made navigable to Oxford, 21 James I., 1625; the Kennet from Reading to Newbury, 2 Geo. I., 1715; the Dee, from Hartford to Ware and London, 12 George II., 1739; Manchester navigation open-

New Spain and Mexico discovered, 1518.

New Style introduced into England, Sept. 3, which was made the 14th, 1752; there was much opposition to the change by the ignorant of all ranks; this change was intended to make the reckoning agree with the Gregorian Calendar: a difference of 11 days had arisen since the year 200, by reason that the solar year consisted of 365 days 5 hours 49 minutes, and not 365 days 6 hours. To obviate this error, Pope Gregory XIII. finding the error ten days in 1582, determined that year should consist of 365 days only; that a year beginning a century should not be bissextile excepting that beginning each fourth century; thus three days are retrenched in 400 years because 11 minutes make three days in that period; thus May 1, Old Style, would be May 12, New Style.

NEWSPAPERS, or, "News'-papers" as originally written; first the English "Mercury," published in England, July 23, 1588; the "London Weekly Courant," 1622, the first containing general information; the "Weekly Courant," 1662; the "London Gazette," under the commonwealth, and during the civil war many provincial papers appeared, as the "Kingdom's Intelligencer," the "Mercurius Anticus," the "Parliament's Scout," "Mercurius Civicus, or London Intelligencer," the "Weekly Account," "Mercurius Britannicus," &c. The "Public Intelligencer," by Sir R. L'Estrange, 1663, which ceased when the London Gazette had printed the first number at Oxford, where the court was during the plague, Nov. 7, 1665; continued in London Feb. 5, 1666; newspapers and pamphlets were

prohibited from being published without a licence, by Charles II., 1680; after the revolution newspapers increased in number, and circulation; the first daily paper was called the "Orange Intelligencer;" and from thence to 1692, there were 26 newspapers. In 1696 there were 9 weekly papers, but only 1 daily paper, besides the votes of parliament, published in London. In 1709 there were 18 weekly and 1 daily paper, the London Courant. In 1724, there were 3 daily, 8 weekly, and 10 evening papers three times a week. In 1792, in London, were published 13 daily, 20 evening, and 9 weekly papers; in the country 70, and in Scotland 14 country newspapers. In 1795, there were 38 published in London, 72 in the country, 13 in Scotland, and 35 in Ireland, in all 158 papers; 14 in London were daily, 10 three times a week, 2 twice a week, and 12 weekly. In 1809, there were 63 published in London, 93 in the country, 24 in Scotland, and 57 in Ireland; making a total of 237 newspapers in the United Kingdom. The Old Whig or "Consistent Protestant," of March 24, 1706, was not larger than a foolscap sheet of paper, having four pages of three columns each; a page and a quarter were filled with advertisements, nearly all of books; it was published at the Oxford Arms, Warwick-lane, by J. Roberts, and also by H. Whitridge, Cornhill, price twopence; it contained accidents, deaths, and inquests; the lord mayor and aldermen were all it appeared of Portsoken in those days, for they began their convivialities by breakfasts at the Boar's Head, East Cheap, still renowned it would seem for Sherris Sacke; the first attempt to diminish newspaper circulation by a stamp occurred in 1713, increased 1725, 1765, 1781, 1789, 1798, 1805, 1808; reduced, 1833: number of stamps issued:

In 1850, there were 891,650 advertisements that paid duty at 1s. 6d., and the amount was 159 publications, of which 48 only were newspapers, properly so called; the sum of duty received, £66,873 : 15 : 0. In 222 English provincial papers there were 875,631 advertisements, giving £65,672.

NEWSPAPERS, Irish, the number of newspapers in 1836 was 78, and 5,144,582 stamps; 1839, 90, and 5,509,034 stamps; and 1850, 102; advertisement duty at 1s., 236,128, £11,806; stamps, 6,302,728 at 1d., and 43,358 at ½d; the first Irish newspaper, "Pue's Occurrences," published 1700; "Faulkner's Journal," 1728.

NEWSPAPERS, Scotch, papers 1836, number 54, stamps 2,654,438; 1839, 64, 3,974,444; and 1850, 94, but 110 paid duty, some not being newspapers; stamps, 7,643,045 at 1d., 241,264 at ½d.; the first newspapers of Scotland were got up in London and sent down; the oldest now in existence is the Edinburgh "Evening Courant," which dates from 1705; then the "Caledonian Mercury," 1720; the "Glasgow Courant" was begun in 1715; the "Dunfries Journal," 1750; in 1793 there were only 14 newspapers in Scotland,

there are now 94, and the difference in the quality of the matter is not less remarkable than the numerical progress.

NEWSPAPERS, French, when, between 1820 and 1830, the arbitrary system of rule in England disappeared, the advance of the free press became rapid and extraordinary; so in France, after the exclusion of the Bourbon dynasty, and its arbitrariness, the same kind of advance was observable; the first French paper was the "Journal de Scavans," 1665. In 1816, the "Moniteur" published 1,650, "Journal de Debats," 8,000, "Gazette de France," 3,000, "Journal de Commerce," 3,500, "L'ami de la Religion et du Roi," 3,300, "Quotidienne," 3,100, "Journal des Maires" 4,300: In 1830, the papers above 100 were as follows, besides 22 of inferior or professional character, carrying the daily number of all to 91,982;

NON-RESISTANCE, Doctrine of, maintained at Oxford, July 24, 1683.

NOBLE, an old English coin, made in the reign of Edward III., and stamped with a rose, whence it was called a rose noble: value 6s. 8d., anno 1340.

NONES, the 7th of March, May, July, and October, and the 5th of all the other months; the nones are the six days following the above four months named, and of the other months, the four days next after the first.

NON-RESIDENTS, by a return sent to the privy council by the archbishops and bishops in the present century; the numbers resident and non-resident in the enumerated sees, are shown to be as follows, between 1830 and 1840:—

	Resident.	Nonresid.
Canterbury.....	202.....	127
York	391.....	276
Lincoln	501.....	532
Norwich	462.....	413
Glouces. & Bris. 179.....	196	
Hereford.....	156.....	150
Ely	246.....	226
Worcester	168.....	151
Chichester	134.....	113
St. David's.....	81.....	331
Llandaff	69.....	110

It thus appears that in the sees of the Archbishop of Canterbury and York, who have the surveillance of the bishops in the other sees, the number of non-resident incumbents falls short of the number resident by only one-fifth.

NORWOOD, Richard, measured a degree of the meridian between London and York, 1632.

NOSE Manufacture; this art invented by Gaspar Taliacotins, born at Bomania, 1553, professor of physic and surgery; he died, 1599. His statue stands in the Anatomy Theatre there, holding a nose in his hand. He wrote *Chirurgia Nova*, in which he teaches the art of engrafting noses, ears, lips, &c. He shows that Alexander Benedictus, a writer on surgery, described the operation for lost noses before him; and the great anatomists, Vesalius and Mr. Charles Barnard (Sergeant Surgeon to Queen Anne) assert, that it has been practised with dexterity and success, from authorities not to be contested. Dr. Fludd, a Rosacruzian philosopher and physician, informs us of a nobleman in Italy who lost part of his nose in a duel: he was advised by one of his physicians to take one of his slaves, and make a wound in his arm, and to join the little remainder of his nose to the wounded arm of the slave, and continue it there for some time, till the

flesh of the arm was united to his nose. The nobleman prevailed on one of his slaves to consent to the experiment, by which the double flesh was united, and a piece of flesh was cut out of the slave's arm, which was so managed by a skilful surgeon as to serve for a natural nose. The slave, being rewarded and set free, went to Naples, where he fell sick and died; at the same instant a gangrene appeared on the nobleman's nose; upon which that part of the nose which belonged to the dead man's arm was, by the advice of his physicians, cut off, and, being encouraged by the experiment, he was prevailed upon to have his own arm wounded in the like manner, and to apply it to the remainder of his nose, which was done, and a new nose was cut out of it, which continued with him till his death; again practised, 1815-24.

ORIUM, duty on, in England 1832, produced £6,081; trade of, between India and China, small, before 1767; in that year reached 1,000 chests, and so continued several years, the traffic being wholly in the hands of the Portuguese. It was in 1773 that the East India Company first made a small adventure in opium to China, and in 1780 a *dépôt* of the article was established in Lark's Bay, south of Macao. The following is a portion of the return of the produce of Bengal, so far as verified by the sales of the India Company at Calcutta, commencing with 1798-99 to 1836-7:—

Chests.	Value in Sicca Rupees.
1798-91,172.....	1,731,161
1807-84,538.....	6,854,157
1817-183,692.....	8,043,197
1827-286,650.....	11,228,416

The return is from the Chinese Repository. In a circular of the Bombay Chamber of Commerce, and a petition of the Calcutta merchants, the statement is given for—

Chests.	Value in Rupees.
1837-3819,600 ...	21,292,386

The exports from Bombay and Dammoun to China, from 1821 to 1836, are thus stated:—

Chests.	Value per chest in Rupees.
1821.....	2,278
1831.....	9,333
1836.....	11,724
	958

The Bombay Chamber of Commerce return the total value of the export from thence, for—

1836-7 at 24,249,821 rupees,
1837-8 at 11,242,325 do.

A proportion of the opium thus exported from India, was directed to other parts besides China; and of the whole quantity produced in Bengal in 1830, about one-third was shipped to ports in the Eastern Archipelago. In the opium districts of Bengal, the plant is cultivated by the ryots on account of the India government, and paid at a certain rate of remuneration. At Bombay it is taxed in a duty of 125 rupees per chest. The total revenue derived from it, which, in 1832, was equal to £1,000,000, exceeded £2,000,000 in 1837, and in the year following may be taken to have reached to nearly £3,000,000.

PHAROS, Tower of, built by Ptolemy Philadelphus, esteemed

one of the wonders of the world, seen at the distance of 100 miles, 280. A. C.; it became the example for all the light-houses that were subsequently erected.

PHENOMENA, Remarkable, the first eruption of Vesuvius on record, flame and smoke darkening the air, and the cities of Herculaneum and Pompeii destroyed, 79; (Herculaneum discovered, 1737, and a number of ancient works of art, MSS., and utensils have been dug out of it ever since; but every thing combustible had the marks of having been charred by fire.) Another fatal eruption—4000 persons were destroyed, and great part of the neighbouring country, 1632. The most dreadful eruption that had been known for a century previous, happened in 1767; a column of fire appeared in the air at Rome, 30 days, 390; the country of Palestine infested with such swarms of locusts, that they darkened the air, and, after devouring the fruits of the earth, they died, and caused a stench, which occasioned a pestilential fever, 406; in the month of Aug. 873, such a prodigious swarm of large grasshoppers or locusts settled upon the lands of France, that in one night they devoured every thing green, even to the leaves and bark of young trees; they died soon after, and the stench caused a pestilential fever. A prodigious quantity of snakes formed themselves into two bands in a plain near Tournay, in Flanders, and fought with such fury that one band was almost destroyed, and the peasants killed the other with sticks, and by fire, 1059; at Oxen Hall, near Darlington, the earth suddenly rose to an eminence, resembling a mountain, remained so several hours, then sunk in as suddenly with an horrible noise, leaving a deep chasm, which continues to this day, 1179; Alice Hackney, who had been buried 175 years, accidentally dug up in St. Mary-hill, London; the skin was whole, and

the joints of the arms pliable, 1494; Marcley hill, near Hereford, was moved from its situation on Saturday evening, Feb. 17, 1571; continued in motion till Monday following—carried along with it the trees, hedges, and cattle, on its surface—overthrew a chapel in its way—formed a large hill twelve fathoms high, where it settled, and left a chasin forty feet deep and thirty long, where it stood before; in 1583, a similar prodigy happened in Dorsetshire, a field of three acres, with the trees and fences, at Blackmoor, moved from thence, passed over another field, and settled in the highway to Hearn; an unaccountable darkness (no eclipse) at noonday, in England, so that no person could see to read, Jan. 12, 1679; a remarkable comet appeared in England for a week, 1680; a body of light appeared in the north-east, which formed several columns or pillars of light, and threw the people into great consternation; it lasted from the evening of March 6, till three the next morning, 1715; the Thames laid dry, both above and below London bridge, by a strong westerly wind, which drove back the tide, 1716; so remarkable a fog in London, that several chairmen mistook their way in St. James' Park, and fell with their fares into the canal, many persons fell into Fleet-ditch, and considerable damage was done on the Thames, Jan. 1, 1729, in the evening; heart of a man found at Waverley, in Surrey, preserved 700 years in spirits, 1731; Portland Isle had 100 yards of its north end sunk into the sea, which did £4000 damage to the pier, Dec. 20, 1735; Scarborough cliff sunk, and the Spa removed, Dec. 18, 1737; Pilling bog destroyed 60 acres of land, April, 1745; a remarkable meteor appeared like a flash of lightning, penetrated the theatre at Venice during the representation, when 600 people were in the house, several of whom were killed;

it put out the candles, melted a lady's gold watch-case, the jewels in the ears of others, which were compositions, and split several diamonds, Aug. 1769; Mercury passed over the sun's disk, visible to the naked eye, from twelve to two o'clock, at London, Nov. 25, 1769; Solway Moss, bordering on Scotland, ten miles from Carlisle, began to swell, owing to heavy rains, and upwards of 400 acres of it rose to such a height above the level of the ground, that at last it rolled forward like a torrent, and continued its course above a mile, sweeping along with it houses, trees, and every thing in its way; it then divided into islands of different extent, from one to ten feet deep, upon which were found hares, wild-fowl, &c., it covered near 600 acres at Netherby, to which it removed, and destroyed about 30 small villages; it continued in motion from Saturday to Wednesday, Dec. 31, 1771; the river Pever in Gloucestershire, suddenly altered its course, and ten acres of land, with every thing upon its surface, were removed with the current, 1773; a large plantation, with all the buildings, destroyed by the land removing from its former site to another, and covering every thing in its way, Oct. 16, 1784, in St. Joseph's parish, Barbadoes; an unaccountable but total darkness at Quebec, North America, Sunday, Sept. 16, 1785; the island of Sabrina rose out of the sea, near the Azores, in the Atlantic, June 13, 1811—at first, the columns of smoke arose out of the sea from the depth of 40 fathoms, then flame, and lastly, land appeared; at length it rose 150 feet above the sea, and ultimately to 300—persons landed upon it—it afterwards sunk down again, and in 1814 had an anchorage over it in 16 fathoms water.

PHILADELPHIA greatly injured by a fire which broke out there at the theatre, Dec. 28, 1799.

PILLORY, the punishment of, abolished, 1 Victoria, June, 1837; it was used in cases of libel, perjury, forgery, and misdemeanour, the first statute being 41 Hen. III.,

1256; sometimes the nose was slit in addition, the face branded with letters, or both ears cut off, as was so cruelly executed by Charles I. and his star-chamber, for censuring his favourite priest, Laud; if very obnoxious to the populace, rotten eggs, stones, and other missiles caused loss of life; if the reverse was the case, the sufferer was cheered, and the attendant officers of justice hooted and pelted; it was first abolished in 1815-16, except for perjury, and in the last case *temp.* I Victoria.

PILNITZ, Treaty of, against France; this convention, to which Europe indirectly owed 22 years of bloodshed, and an enormous waste of treasure, took place July 20, 1791; the revolution in France appeared to offer an opportunity, from its apparent weakness, of imitating the partition of Poland; a treaty was agreed upon by which the emperor should seize all that Louis XIV. had acquired in the Netherlands, and, uniting that to the other Netherlands, give them to the Elector Palatine, while Austria should unite Bavaria to her own dominions; the same object mainly produced the celebrated march to Paris of the Duke of Brunswick, in 1793; the spoil of France was a stronger bait to action than even the Bourbon restoration.

PINES, these trees were introduced into England at different periods; the stone and cluster pine, and other sorts, it is uncertain when, but the Weymouth pine was introduced from North America, 1705; the frankincense pine from the same quarter, before 1713.

PINKY, Battle of, between the English and Scotch, when the latter were routed, with the loss of 10,000 men and 1200 prisoners, while the victors did not lose 200.

PINNEY, Mayor of Bristol, tried for negligence and pusillanimity during the memorable riots; he was acquitted, Nov. 1, 1832.

PINS first used in England, and

articles of foreign commerce, 1483; made of brass wire brought from France, 1540; made in Engl., 1543.

PIPPINS first planted in Lincolnshire, 1525.

PISA, republic of, founded 1403; leaning tower or campanile at, 188 feet high, and 11 feet over the base.

PISTOLS first used by cavalry in war, 1544.

PITCH and Tar first made from pit coal, at Bristol, 1774.

PITCAIRN's island in the Pacific, discovered 1773, inhabited by the descendants of the mutineers of the Bonnty, Captain Bligh, 1789, unknown until 1814; emigrated to Otaheite for want of water, but disgusted with the Otaheitan manners, returned again, 1832.

PITT'S Straits, in the East Indies, discovered, April 30, 1760.

PITT, William, afterwards Earl of Chatham, the most popular, powerful, and successful minister England ever possessed, with oratorical powers of the highest order, born 1708, died May 11, 1778; buried at the public expense in Westminster Abbey, June 9. "Without dividing he destroyed party, without corrupting he made a venal age unanimous. France sunk beneath him. With one hand he smote the house of Bourbon, and wielded with the other the fierce democracy of England."

PITT, William, the second son of the Earl of Chatham, who became prime minister, Dec. 27, 1783, and remained in office until 1801; he came into office again, May 12, 1804, and remained until his death, Jan. 23, 1806; he possessed great oratorical powers, and continued to keep his place under very disadvantageous circumstances; with a strong desire to be a great war minister, he was unfortunate in all his objects, France to the hour of his decease obtaining a continued series of successes; he received the honour

of a public funeral in Feb. 1806. His ambition, above all pecuniary considerations for himself, did not hesitate to make them the means for the attainment of his objects, and the burthens of the nation were made under his administration to press with a weight that had no previous example. The want of success in the measures of the allies, whom he unsparingly subsidized, preyed upon his mind, and accelerated his death.

PIUS IX., the existing pope and bishop who fills the chair of St. Peter; the name of nine of the same Catholic high functionaries, derived from Antoninus Pius, so named from his piety, 138.

PIUS, Order of knighthood at Rome, 1500.

PIX, the box that contains the host, as ordered by the Lateran council, 1215.

PLAGUE, numerous visitations of that scourge occur before the Christian era. At Rome, 10,000 persons perished daily, A.D. 78; the same disease again ravaged the Roman empire, A.D. 167. In Britain a plague raged so formidably, and swept away such multitudes, that the living were scarcely sufficient to bury the dead, A.D. 430. A dreadful one began in Europe in 558, extended all over Asia and Africa, and it is said did not cease for many years; at Constantinople, when 200,000 of its inhabitants perished, A.D. 746; at Chichester in England, an epidemical disease carried off 34,000 persons, 772. In Scotland, 40,000 persons perished of a pestilence, A.D. 954. In London a great mortality, A.D. 1094; and in Ireland, 1095. Again in London; it extended to cattle, fowls, and other domestic animals, 1111. In Ireland, after Christmas this year, Henry II. was forced to quit the country, 1172; again in Ireland, when a prodigious number perished, 1204. A general plague raged throughout Europe, causing a most extensive mortality. Britain and

Ireland suffered grievously. In London alone, 200 persons were buried daily in the Charterhouse-yard. In England, 1247 and 1347, when 50,000 died in London, 1500 in Leicester, &c.; in Germany, which cut off 90,000 people, 1348; In Paris and London, a fearful mortality prevailed in 1362 and 1367, and in Ireland, in 1370; a great pestilence in Ireland, called the fourth, destroyed a great number of the people, 1383; 30,000 persons perished of a dreadful pestilence in London, 1407; again in Ireland, superinduced by a famine, great numbers died, 1466; and Dublin was wasted by a plague, 1470; a pestilence at Oxford, 1471; and throughout England a plague, which destroyed more people than the continual wars for the fifteen preceding years, 1478. The sweating sickness fatal at London, 1485; the plague at London so dreadful, that Henry VII. and his court removed to Calais, 1500; again, the sweating sickness; in most of the capital towns in England half the inhabitants died, and Oxford was depopulated, 9 Henry VIII., 1517. Limerick was visited by a plague, when many thousands perished, 1522; a pestilence throughout Ireland, 1525; and the English sweat, 1528; and a pestilence in Dublin, 1575; 30,578 persons perished of the plague, in London alone, 1603-1604; 200,000 perished of a pestilence at Constantinople in 1611; in London a great mortality prevailed, and 35,417 persons perished, 1625; in France, a general mortality; at Lyons 60,000 persons died, 1632. The plague brought from Sardinia to Naples (being introduced by a transport with soldiers on board), raged with such violence as to carry off 400,000 of the inhabitants in six months, 1656; memorable plague, which carried off 68,596 persons in London, 1665; 60,000 persons perished of the plague at Marseilles and neighbourhood, brought in a ship from the Levant, 1720; at

Messina, Feb. 1743; at Algiers, 1755; in Persia, when 80,000 persons perished at Bassorah, 1773; at Smyrna, that carried off about 20,000 inhabitants, 1784; and at Tunis, 32,000, 1784; in the Levant, 1786; at Alexandria, Smyrna, &c., 1791; the yellow fever destroyed 2000 at Philadelphia, 1793; on the coast of Africa, particularly at Barbary, 3000 died daily. One of the most terrible plagues that ever raged, prevailed in Syria, 1760. In Persia, a fatal pestilence, which carried off 80,000 of the inhabitants of Bassorah, 1773; in Egypt more than 800,000 persons died of plague, 1792; in Barbary, 3000 died daily; and at Fez 247,000 perished, 1799; in Spain and at Gibraltar, immense numbers were carried off by a pestilent disease in 1804 and 1805; at Arta, 1817, two-thirds of the population taken off after 48 hours' illness. At Malta it committed great ravages, 1813; in Lesser Asia, Syria, and the adjacent islands, by which Smyrna is computed to have lost 30,000 persons, 1814; in Naples, 1816; again, at Gibraltar, an epidemic fever much resembling the plague, caused great mortality, 1828; the Asiatic cholera made its first appearance in England, at Sunderland, Oct. 26, 1831; in Scotland, at Haddington, Dec. 23, in the same year; and in Ireland, at Belfast, March 14, 1832; again visited England, 1848 and 1849. The black death raged in Europe in the 14th and 15th centuries, and in Asia; Aleppo lost 500 daily; Cyprus, nearly all its inhabitants; Florence, 60,000; Venice, 100,000; Marseilles, in a month, 16,000; Sierra, 70,000; Paris, 50,000; St. Denis, 14,000; Avignon, 60,000; Strasbourg, 16,000; Quebec, 9000; Basle, 14,000; Euport, 16,000; Weimar, 5000; Limburg, 2500; London, 100,000; Norwich, 51,100; the Franciscan friars in Germany, 124,434; the Minorites in Italy, &c., 39,000; in some parts of France

not 2 out of 20 inhabitants were left alive; 500 per day died in the Hotel Dieu at Paris; Yarmouth, 7052, &c., terminating in England, 1349; Spain was ravaged till after 1350 by the black death, which had ravaged every country in Europe, except Russia, from 1347; no less than 25,000,000 of its inhabitants disappeared from Europe.

POOR Laws and Pauperism—the poor of England were maintained by the church, and by the religious establishments, before the time of Henry VIII., and by act of parliament, 1388, so regulating their maintenance, that when that monarch destroyed the monastic establishments, and appropriated their property to his own use, he not only left the poor without resources for support, but increased their number, by turning the inmates themselves of those establishments, for the most part, upon the world, in 1538; the wreck of great families and breaking up of feudal households, had begun to be considerable in the preceding reign; persons who begged, being able-bodied, were to be set to work by 27 Henry VIII., though how work was to be obtained there was no clear provision; whipping was the penalty for the first offence *for begging—the right ear cut off upon the second conviction—and death,

for the third. The amount was between 70,000 and 80,000 executions in the reign of that sanguinary tyrant; the present poor law originated with Queen Elizabeth, 1600; in 1580, there was paid, in aid of the support of the poor, £108,811—in 1748-50, the average was £730,000—between 1750 and 1775, the rate levied had doubled, being £1,720,000, of which about £1,500,000 were expended for the relief of the poor; the American war commenced, and from that time to 1814, the amount of the rates increased regularly—the last three years of that period averaged £6,123,177, expended upon the poor; from 1813 to 1844 inclusive, the sums levied under poor law acts, and expended on the poor, were in amount £238,153,571, of which there was expended in their maintenance, £190,369,632, the amount in each year being as follows: the difference consisting of county rates and similar imposts.

1813	8,646,841	6,656,106

The sums since expended upon the poor have been, in 1845, £5,039,703; in 1846, £4,954,204; in 1847, £5,208,787; in 1848, £6,180,764; in 1849, £5,792,963.

An act for the better administration of the poor laws was passed, Aug. 14, 1834; the rates do not bear heavier now upon the public, than they did at the commencement of the century. The rates were, per head on the population, in—

The number of paupers relieved within doors, and the total without doors in 8 years, from 1840 to 1848, was as follows: the difference between the in-door and total was the out-door relief:

	In-door.	Total.
1840	169,232	1,199,529
1841	192,106	1,299,048
1842	223,642	1,427,187

1847	265,037	1,721,350
1848	265,140	1,626,201

Of these the impotent, sick, or paupers from accident, comprised about one-third of the whole number; the burthen of the poor-rates is always where there is the greatest ignorance, or in the agricultural counties; the rates were heaviest in Wilts and Sussex in 1841-2, and least in Lancaster and Stafford; the poor-law amendment bill passed Aug. 1834 and in June 1838; for the removal of the poor, Aug., 1846 and July 1847.

Poor in Scotland, the disgraceful neglect of the poor in this country, was first attempted to be remedied by an act, passed Aug. 4, 1845, in consequence of the mockery of all charity in the means before existing for that purpose, as displayed in evidence before parliament; the sums raised for the relief of the poor were in 1847, in 880 parishes, £433,934, and in 1848, £533,462, of which were expended for actual relief; £385,743, and £485,700 respectively; number relieved, 1849, 228,645, cost per head, 42s. 5d, total £501,420.

Poor Law, Irish, the act for an Irish poor-law passed July 1, 1838; amendment of act, March 15, 1839; poor law rate in aid act, May 18, 1849; the total sum raised by assessment, Sept. 1849, was £1,671,148.

Poor in Sweden, 1829, the number relieved was 63,348, out of a population of 2,750,132; another authority stated the number relieved in 1825, to be 544,064; the annual

disbursements of a farmer's family here, are only about £7, 10s. per annum.

Poor in Norway, there are so few in many places, that one is divided amongst five or six farmers, who take him in rotation, he doing any light business for them which he is able to perform.

Poor and Pauperism in France, the sums levied in charity (for there are no poor-laws in that country), were in 1832 as follows:—

For Foundlings in towns £422,921

In the departments, expended by the Bureau de Bienfaisance, at the dwellings of 695,932

persons - - £358,241

Revenues of the hospitals and almshouses, 1833 - - £2,048,882

Poor in the United States, 1852, 134,972 received relief as paupers, but only 50,353 subsistence; three-fourths of these were natives.

Poor in Holland, their number is greater than in England in proportion, or in 1831 over 1 in 9, or 11·40 per cent; the population, 1827, was 2,307,661, and 454,304 received relief.

Poor and Population in Belgium, the sums raised here for the poor in 1832, amounted together to £378,160; both in Holland and Belgium what are called colonies were established, or farms where the poor are set at work; it did not turn out profitably.

Poor Knights of Windsor, instituted by Henry VIII. in his will, dated 1547-8, at first 13 only in number, but subsequently increased to 28; the name changed by William IV. to military knights of Windsor, Sept. 1833; the naval knights of Windsor are a different foundation, under the will of Samuel Travers, Esq.

Pope, from "papa," a name given to all bishops until the time of Gregory VII., when it was confined to that of Rome exclusively, 1073.

Pope's power in England, quarrelled with the king about the choice of an archbishop of

Canterbury, 1207; laid England under an interdict, when all the church services ceased, 1208; excommunicated the king and absolved his subjects from their allegiance, 1209; proceeded to depose King John, and to give away his kingdom, 1212; received John's submission, and absolved him, upon his resigning into the papal hands the sovereignty of his entire kingdom, and becoming a tributary to Rome, 1213; excommunicated the barons and the citizens of London, 1215; demanded an annual tribute from every monastery and cathedral in England, but was denied it, 1226; collected the tenths of the kingdom with great rigour, 1229; caused great extortion to be practised in this country, 1242, 1244; tribute to, refused by England, 1365; sent several presents to the King of England, 1510, 1514; taken prisoner, and his palace pillaged by the Duke of Bourbon, 1527; his supremacy abolished in England, 1531; power in England entirely abrogated, 1536; power and popery re-established, 1553; finally abolished, 1558.

PORES, succession of, asserted to be from St. Peter, the date of whose death (pretended by some to have occurred A. D. 42) is really unknown, and his immediate successor St. Clement (as some authors pretend), is equally uncertain; the third bishop of Rome was St. Linus, 66.

POPE JOAN, a story asserted on no solid grounds, that a female named Joan, disguised in a male habit, entered a monastery, became a learned professor, and on the death of Leo IV., 855, was elected pope.

POPLAR Tree brought to England from Italy in seventeenth century; the American poplar was brought over in 1750.

POPULATION. See also Census.

POPULATION of the Earth, accuracy in the conjectures upon the sum total of the inhabitants of our globe, can hardly be brought to the test; some able writers on statistics, calculated the total number in 1845, at 1,075,000,000—giving Europe, 275,000,000—Asia, 570,000,000—Africa, 120,000,000—America, 80,000,000—and the fifth division, named Australasia, 30,000,000.

POPULATION—the Slaves of the United States. During the last forty years, it would appear that the proportion of the slave population is on the decrease, although the actual number of the slaves has been considerably on the increase. In 1790, the whole population of the United States was 3,939,827 souls, of whom 697,897, or 10 in every 56, were slaves; in 1800, whole population, 5,305,925, of whom, 893,041, or 10 in 58, were

slaves; in 1810, whole population, 7,239,814, of whom 1,191,364, or 10 in 61, were slaves; in 1820, whole population, 9,638,131, of whom 1,538,064, or 10 in 62, were slaves; and in 1830, whole population, 12,866,020, of whom 2,009,031, or 10 in 64, were slaves. In this interval of forty years, the whole population increased at the average rate of 8 per cent per annum, whilst the slave population scarcely exceeded an average increase of 7 per cent. In 1830, the States of Virginia, North and South Carolina,

Georgia, and Kentucky alone, contained 1,413,323 slaves, or nearly three-fourths of the whole of that class of wretched beings in the United States, whilst the entire number of inhabitants in those five states did not amount to more than 3,735,317. The proportion of the slaves in the latter to the population was then, 10 in every 28 inhabitants.

The average population for 20 years, from 1817 to 1837, is 31,815,000. The wars of Napoleon did not appear to affect this increase, as the following statement evinces.

In 1791, a committee of the Constituent Assembly, appointed specially for the purpose, returned the population at 26,363,000. In 1817, France, restored to the same limits, 29,217,187; in 1825, 30,451,187; in 1831, 32,560,934; in 1841, 34,230,178. The increase in 50 years, from 1791 to 1841, was 29 5-6ths per cent.; from 1791 to

1831, the period of revolutions and sanguinary wars, 23½ per cent.; from 1791 to 1817, 10 4-5ths per cent.; from 1817 to 1825, 4½ per cent.; and from 1825 to 1831, 7 per cent. In England, between 1801 and 1841, the increase was 79½ per cent.; the births in France, in 1817, were 1 in 31; in 1834, they were 1 in 33 2-3rds; the deaths in 1817, were 1 in 39½; in 1834, they were 1 in 41; the annual births to the whole population, 1 in 32 4-10ths; marriages to the whole population, 1 in 131 6-10ths; average of chil-

dren to a marriage, 4 7-100ths—legitimate to illegitimate births, 13 to 1.

POPULATION of Europe, effect of political prospects upon. During the years 1817, 1818, and 1819, when the political prospects of France were in their zenith, 1 person was married in 98; in the subsequent years, the numbers again fell, to 1 in 108—1 in 111—and 1 in 118. In France, from the year 1815 to 1822, the number of marriages was less than before the revolution, although the population was greater by several millions. After 1817, annual marriages increased by about 8,000, and continued stationary at that rate till 1821—but, in 1822, after the evacuation of the country by foreign troops, the number quickly rose by 26,000—and, in the ensuing year, even to 40,000. It again declined during the obnoxious administration of Villele, and again increased after the overthrow of his ministry. Even in Russia, from 70,000 to

80,000 couples less than usual were married in 1812. The proportion of deaths among children under 5 years, is remarkable, and seems to keep pace with the degree of education and comfort of the inhabitants. It is smallest in the large towns; and would be smaller still, if it were not for those who die in workhouses and hospitals, deserted by their parents. The degree of fertility of marriages, seems to vary between 3,500 and 5,506 children to 1000 couples. The average of more than 77 millions of births, and 17 millions of marriages, all extending over a period of several years, shews, that to a thousand marriages there were born in the

Kingdom of the

Two Sicilies... 5,546 children.
In France..... 4,448
In England..... 4,090 in 1841.
In Zealand 3,439

The Two Sicilies and Zealand being the extremes. Marriages appear to be less prolific, as countries lie nearer to the north.

In 1849, slavery being abolished, and the colony improved, the population was 175,540, of all races.

St. Helena had a population of all races, in 1839; total 4706. Ascension Island has an inconsiderable population. Sierra Leone, in 1844, contained only 175 whites—with the free blacks, the number amounted to 44,935. The population of the other settlements on the Gambia, was 4446 blacks, and 49 whites; and at Cape Coast, Arica, Dix Cove, and Annamabo, the white population is very inconsiderable, owing to the deadly nature of the climate; but the British influence extends over not less than 800,000 of the black population on the gold coast, called Fantees. To the population of these stations must be added that of Fernando Po, an island which has but 3 white inhabitants, and from 3000 to 4000 blacks. The settlements of Tacia, Quittah, Ningo, and Addah, purchased of Denmark by England, contain no more than a dozen white people in any, owing to the fatal fever of the country.

POPULATION Resident in a house, in England and Wales, gave in 1841, the proportion $5\frac{1}{2}$, and in Scotland $5\frac{1}{2}$ to each dwelling; the proportion fluctuates in different

towns; where the population is densest at one time, at another it is found to differ, and become more diffused from the extension of new buildings. London gave $7\frac{1}{2}$ in 1832; Manchester and Liverpool $6\frac{1}{2}$; Bath $7\frac{1}{2}$; Plymouth $9\frac{1}{2}$; Birmingham 5; Leeds, Norwich, Sheffield, about $4\frac{1}{2}$.

POPULATION of China, estimated by the suite of Lord Macartney at 150,000,000; but a Chinese mandarin told him that the population was above 330,000,000 in 1793; Neuhoft in his travels gave it at 230,000,000; the denseness of the population is undoubted, but the exact number it is impossible to ascertain.

PORCELAIN first brought to perfection in Saxony, 1706; made at Chelsea, 1760, and in several other places in England subsequently, as in Staffordshire and at Worcester.

PORT Jackson, New South Wales. See Sidney.

PORCHESTER Castle, Hants, one of the earlier works of the Romans in England, 4 miles north of Portsmouth, used as a receptacle for prisoners of war from 1794 to 1814.

PORCUPINE, Order of Knighthood, began in France, 1393.

PORTERAGE Act passed, regulating the tonnage of small parcels, 1799.

PORT-Royal, Jamaica, destroyed by an earthquake, June 1692; in 1722 inundated by the sea, and in 1744 ravaged by a hurricane; after these injuries the principal offices were removed, and no market held there afterwards; in 1815 it was so ruined by a fire that only 200 houses remained, most of the inhabitants had removed to Kingston; the cholera visited it in 1850; the harbour is fine; 1000 vessels might ride in it securely.

PORT-AU-PRINCE, St. Domingo, 150 persons burned at, June 1784; nearly the whole town was burned in a riot, Dec. 1791.

PORTEOUS, Captain, hung by the

populace at Edinburgh; a smuggler was to have been executed; a fellow-depredator on the revenue kept back the soldiers from seizing his companion, and gave him the opportunity of escape, for which act he was to suffer; the crowd sympathised with the men and pelted the guard, and Captain Porteous ordered his men to fire on the people, April 14, 1736, when 17 persons were killed or wounded; the captain was tried and found guilty of murder, but was reprieved, evidently with the intention of saving him; the people in consequence broke into the prison, took him out and hanged him on a sign-post, in defiance of the military and the authorities; though large rewards were offered, no individual concerned in the deed was ever discovered, Sept. 7, 1736.

PORTER, two huge butts of, at Meaux's brewhouse, burst Oct. 17, 1814, and between 8000 and 9000 barrels were lost; porter raised 2d. per gallon, Jan 10, 1762, again, 1801.

PORTLAND Island, the castle built by Henry VIII.; fortified before 1142; engagement off, between the English and Dutch fleets, lasting three days, Feb. 18, 1653; 11 Dutch men of war destroyed, besides 30 merchant vessels, by Van Tromp and Blake, the commanders; north-east arm sunk in the sea, Dec., 1738; breakwater at, begun July 25, 1849.

PORTLAINE, Order of, begun in Livonia, 1196.

PORTHOLES introduced into ships of war, 1545.

PORTLAND Lighthouse erected, 1716-89.

PORTLAND Administrations, the first the well-known coalition ministry, of which William Henry Foxendish Bentinck, duke of Portland was the head, April 5, 1783; 1838 Nov. was in March 25, 1807, 1838 St. ChrisDec., 1809, when 1839 St Lucia ! became prime 1831 St. Vincent.

PORTOBELLO discovered by Columbus, Nov. 2, 1502; taken from the Spaniards by Admiral Vernon, Nov. 22, 1739; again in 1742, and the fortifications of, destroyed.

PORTO-RICO discovered, 1497.

PORTO-FERRAJO, Isle of Elba, fortified by Cosmo of Florence, 1548, finished only in 1628; became the residence of Napoleon Bonaparte in 1814.

PORTREEVE, the ancient name of the principal magistrate of a town, who ultimately became mayor, in the reign of Richard I., 1189.

PORTSMOUTH, one of the great stations of the navy of England; burnt, 1265; again by the French, 1377; attempted again, but failed, 1544; the dockyard supplied with water, 1741; £12,000 voted for an hospital at, 1744-5; set fire to, July 3, 1760, and damage done to the extent of £400,000; another fire, July 27, 1770; again, Dec. 7, 1776; sham naval engagement at, in presence of the king, June 1773; twenty men, women, and children blown to pieces at, by an explosion of gunpowder, June 24, 1809; at the launch of the Queen Charlotte, a dock gate burst open, and 60 persons drowned, 1805.

PORTUGAL, once called Lusitania, made a part of Spain or Iberia under the Roman sway; it was conquered by the Moors, 713, and remained long subject to them until conquered by Alphonso of Spain, who was the first sovereign; though taken by Spain, it subsequently revolted successfully; the House of Braganza sat on the throne no longer under the sovereigns of Spain, and that race retained it.

There is a heavy postage charge upon the government departments, of about £110,000 per annum, not deducted above. The duties of the office have been greatly extended both abroad and at home, which accounts for the heavy additional charges of management. The number of letters which passed through the post-office, between 1839 and 1852, under the new system, was as follows:—

	Number.	An. Increase.
1839,...	76,000,000...	
1840,...	169,000,000...	93,000,000
1841,...	196,500,000...	27,500,000
1842,...	208,500,000...	12,000,000
1843,...	220,500,000...	12,000,000
1844,...	242,000,000...	21,500,000
1845,...	271,500,000...	29,500,000
1846,...	299,500,000...	28,000,000
1847,...	322,000,000...	22,500,000
1848,...	329,000,000...	7,000,000
1849,...	337,500,000...	8,000,000
1850,...	347,069,071...	9,500,000
1851,...	360,500,000...	13,500,000
1852,...	379,500,000...	19,000,000

In 1850, there were 4,439,713 money orders; 8,494,498 money orders paid; £70,577 the expenses of the money order office, and there were £73,813 received; £400,964 was

paid to railways; only £52,860 was paid to railways in 1839, and there were but 188,921 money orders, in amount £313,129.

In 1788, on Mondays, from 18,000 to 20,000 letters passed through the post-office; Tuesdays, from 16,000 to 18,000; Wednesdays, Thursdays, and Fridays, about 15,000; and Saturdays, 22,000 to 25,000; Sundays no mail. The post, in the reign of James I., by an endorsement on a letter, dated Plymouth, 1623, left on June 17, 1623, at 11 a.m., reached Ashburton the same day at 4 p.m., and Exeter at 4 a.m., June 18; at Honiton at 11 a.m., and at Sherborne late at night, June 18; Salisbury, June 19, at 6 a.m., Andover, after 9 a.m., and Basing, at noon on the 19th, Hartford Bridge at half-past 2 p.m., Staines at 5 p.m., June 19th, and the Strand by 8 at night; thus this post rider, whose letter was endorsed, "Haste, post! haste for thy life!" was from—

	Hours.	Miles.
Plymouth to Exeter,	17	41½
Exeter to Honiton,	7	16½
Honiton to Sherborne	11	35
Sherborne to Salisbury	10	34
Salisbury to Andover	17½	3½

Having got on the old Roman road, he went to Basingstoke . . .	19½	3
From Basingstoke to Hartford Bridge . .	10	2½
Hartford Bridge to Staines	19	3½
To the Strand with his dispatch	19	3½

In all, 57 hours, or 3½ miles an hour, the whole distance being about 213 miles. In 1835, the De-fiance coach ran the whole distance in 27 hours, at 8 miles an hour; the Great Western railway in 4½ hours. In 1612, the mail from London to Edinburgh consumed 13 days, or about 32 miles in each 24 hours, with 80 able horses at £4, 10s. per head the whole journey, and 6d. above 20 for every pound weight of luggage. In 1825, the mail from London to Edinburgh ran the distance in 46 hours.

Post.—The mail first began to be conveyed by coaches, on Palmer's plan, Aug. 2, 1785; to Milford Haven, and thence by water to Waterford, 1787. The increase of the revenue by the mail-coaches was above £30,000 in 1788.

Post-Office, New, in St. Martin's le Grand, begun 1825, opened 1829; it was originally established in Cloak-lane, near Dowgate-hill; then removed to the Black Swan in Bishopsgate; after the fire of 1666 it was removed to Bridges-street, Covent-garden, and subsequently to Lombard street, where it continued until 1829, Sept. 23.

Post-Office, Dublin, a new one opened, Jan. 6, 1818.

Postmaster-General, the first said to have been Thomas Randolph, appointed by queen Elizabeth, 1581; a foreign postmaster was established by James I., and Matthew de l'Equester received that office; Charles I. ordered that a running-post should be established in Edinburgh, to go and return in six days and nights; the parliament in 1643, seemed, by one of its or-

ders, to have suspicions that correspondence was sometimes inspected at the post-office.

Postage and Post-chaises invented in France; the price was fixed by Edward IV. at one penny per mile, 1548; none but the postmaster, or his authority, could furnish post horses for the traveller, 1660.

Post-Chaise Tax imposed, 1779; altered, 1780.

Potato, according to some authorities, brought to England by Sir Francis Drake from South America, others ascribe the introduction to Sir Walter Raleigh, or Sir John Hawkins; Sir Walter, it is not disputed, introduced it into Ireland, though perhaps through another person; for in 1693, Sir R. Southwell informed the Royal Society that his grandfather first brought potatoes into Ireland, having received them of Sir Walter Raleigh; esteemed a great delicacy, for it was noticed among the different articles provided for the Queen's household, 1619; first became an object of national importance to plant, 1662; in a report to the Royal Society, Linnæus endeavoured to introduce the use of the root into Sweden more extensively, 1764; a royal act issued to encourage it; first planted in open fields in Scotland, 1728; the cultivation general in England, 1745; a failure of the crops in Ireland in 1845 produced famine and fever there to a very frightful extent.

Potosi, discovery of the mines of, by the Spaniards, 1545.

Potsdam, the fine cathedral of St. Nicholas at, destroyed by fire, Sept. 4, 1795.

Pottery, valuable discoveries and tasteful improvements of, by Mr. Wedgwood, 1763.

Pound in the time of the Saxons was the weight of 240 pence; it is also said to have been in 671 a pound Troy of silver; in the time of William Rufus, 11 oz. 2 dwt. of fine silver, and 18 dwt. of alloy, or the weight of fine silver in 20s.;

in 1087, 11 oz. 2 dwt., worth £3, 2s. of present money; the oz. of fine silver was 1s. 9d., twelve times, which was the pound value, and the weight in tale was 12 oz.

POWDER Mills at Dartford exploded, and killed several persons, Oct. 12, 1827.

POWDERED Hair taxed first by Pitt, May 5, 1795; scarcely returns more than £7500 per annum.

POWDERHAM Castle, Devon, built, 970.

POWDERING the hair, the custom is said to have arisen from the ballad singers in the fair at St. Germans in France, whitening their heads with flour to appear ridiculous; in France, before the revolution, and also in England, ladies used different coloured powders, some consisting of gold particles.

POWELL, the pedestrian, walked from London to York and back again in six days, Nov. 27, 1773, above 402 miles; he performed the same feat again, June 20, 1788, when he was 57 years old.

POWER-LOOMS, number of, in England, 1835, 113,428; 1850, 288,336; the number of cotton looms was respectively as follows: 108,632, and 249,627 of worsted, 3082, and 32,617 of silk, 1714 and 6092; increase in 15 years, 174,998 looms.

POWIS Castle, Montgomeryshire, built 1110.

POYNING'S Law, one of those disgraceful statutes which once disfigured the Irish statute-book, so called from having been passed under the deputyship of Sir Edward Poyning, at Drogheda, in 1495; it gave the power of originating all public acts to the crown, leaving the Irish parliament upon recognition the right of refusal; repealed, 1782—5, with sundry other acts of no better character.

PRÆMUNIRE, statute enacting the offence of introducing any foreign power into the country, 35 Edward I., 1306; other statutes to the same end were passed *temp.* Edward III.,

but the common statute is that of Richard II., 1392; it is by this statute, so utterly useless in modern times, that the pope is prevented from having a proper representative in England, under the invidious pretence that it will endanger the monarchy; Mr. Canning was prevented from complying with the common custom of replying to a civil letter from the pope, because the above act affected any such correspondence.

PRÆMONSTRATIENSIS Order, the first house of this religious order in England was founded at Newsham, Lincolnshire, 1143; other establishments of a similar character were soon afterwards formed.

PRAGUE, the capital of Bohemia, founded by the Emperor Charles II., 1361. In size and beauty it is the third city in Germany; and strongly surrounded by fortifications.

PRAGUE, Battle of, between the Imperial troops and Bohemians, when the latter were defeated, Nov. 7, 1620; taken by the Saxons, 1631; by the Swedes, 1648; stormed by the French, 1741; by the king of Prussia, 1744; the memorable battle of, in which the Imperialists were defeated by Prince Henry of Prussia; unsuccessful siege of, by the king of Prussia, directly afterwards.

PRAGUE, Battle of, between the Poles and the Russian butcher Suwarrow, Oct. 10, 1794, when 30,000 Poles fell; second battle of, in which the Russians were defeated, with the loss of 4000 killed and wounded, 6000 prisoners, and 12 pieces of cannon, took place, March 31, 1831, the Poles were commanded by Skrzynecki.

PRAGMATIC Sanction, undertaken to limit the power of the pope as to the Gallican church; also for settling the German Empire in the House of Austria, 1439; in 1714, relative to the settlement of the crown in default of male issue; and in 1722, when Joseph I. settled the crown on Maria Theresa, who succeeded to it in 1840.

PRAISE God Barebones, a parliament so called from the peculiar name attached to one of the members, July 4, 1653; it consisted of 120 members summoned by Cromwell, who sat for 15 months.

PRASLIN, Duke of, cruelly murdered his wife, the daughter of Marshal Sebastiani, in Paris, Aug. 17, 1847; the duke, to avoid capital punishment, took poison, of which he died.

PRAYING towards the East, ordered by the Pope, 532; by the Puseyites in England, 1836-45.

PRAYERS for the dead introduced into the Roman Catholic church, 190; to the Virgin Mary and Saints, by Pope Gregory, 593.

PRECEDENCE, order of, 1852:—

The Queen

Prince of Wales.

Prince Albert.

[Queen's other sons.]

Of the above, 116 are published daily—14 every 3 weeks—30 twice a-week—and 881 once a week; the remainder are issued half monthly, monthly, and quarterly—principally magazines and reviews. 38 are in the German language—4 in French—and 1 in Spanish. Several of the New Orleans papers are printed in Spanish and French.

Press, the German,—the whole population of the German states,

composing the confederation, was for 1833, 36,288,668; the number of places in which printing was then carried on, was 164; the number of publishers, 505; and the works published by them in that year, 5,653. An examination into the proportions between the population of the several states, and the number of towns in which printing presses exist, is curious.

PRESTON'S Guild established, 1172.

PRESTON, Battle of, between the Scotch rebels under Forster, and the British under General Wills, when

the latter, investing Preston, the rebels laid down their arms—the principals were secured, and many shot as deserters; others were sent to London to be tried for high treason, Nov. 12, 1715; 7 were transported, 1716; 7 escaped from the Tower, 1716; 40 were discharged, July 1716; 30 transported, mastered the ship, and escaped to France, 1716; 100 transported, 1717; 200 discharged.

PRESTONPANS, Battle of, between the Scotch rebels, led by the young pretender, Charles Stuart, and the English under General Cope, when the latter behaved with great pusillanimity, and were defeated with the loss of 500 men, Sept. 21, 1745.

PRETENDER, the Elder, *alias* the

Chevalier St. George, *alias* James III. of England, as acknowledged by Louis XIV. of France, 1701, was the son of James II., the expelled monarch, and born 1688; he asserted his right, Aug. 29, 1714; £100,000 offered to apprehend him, Sept. 15, 1714; he landed his troops in Scotland, Aug. 30, 1715—proclaimed by the Earl of Mar, and his standard set up at Braemar and Castletown, Sept. 3, 1715; at Lancaster, Nov. 9, 1715; landed at Peterhead, Dec. 26; made a public entry into Perth, Jan. 9, 1716; sent an order to the lord mayor of London to proclaim him, Jan. 10, 1716; embarked for France from Montrose, the rebellion being suppressed, Feb. 5; landed at Gravelines—deprived Henry Lord Bolingbroke of his secretaryship, Feb. 25, 1716; obliged by the French regent to remove from Avignon to Italy, 1716; married the princess Sobieski, grand-daughter of the king of Poland, Aug. 21, 1718; joined Cardinal Alberoni in his scheme to disturb England, Dec. 29, 1718; received at Madrid as king of England, March 28, 1719; his son, born Dec. 20, 1720; in vain, attempts again a rebellion in England, 1725; his princess retired to a convent, 1725; the Duke of Parma honoured him as king of England, July, 1728; his eldest son quitted Rome for France, Jan. 9, 1744; died at Rome, Dec. 30, 1765.

PRETENDER, the Younger, or Prince Charles, born 1720—reached France, Jan. 27, 1744; £6000 offered by the city of Dublin for his apprehension, should he land in Ireland, March 7, 1744; the same sum by Edinburgh, should he land in Scotland, March 25, 1744; £30,000 offered by England for his person, if landed in any part of the British dominions, Aug. 6, 1745; landed in Scotland, and proclaimed his father at Perth, Sept. 4, 1745; at Dundee, Sept. 1745; proclaimed in Edinburgh, Sept. 21, 1745; defeated General Cope at Preston-

pans, Sept. 21; proclaimed at Ormskirk, Nov. 25, and worsted General Hawley at Falkirk, Jan. 17, 1746; defeated at Culloden, April 16, losing all his baggage, and becoming a wanderer for six months in the desert wilds of Scotland, and £30,000 offered for his person; he managed to escape, after great hardships, from the Isle of Uist to Morlaix; he died, March 3, 1788; his brother (calling himself Henry IX.), Cardinal York, born March 1725, died at Rome in 1807—he had received benefices from the pope, to the annual value of 20,000 crowns, in 1747.

PRIMER, the first book used in the instruction of children, so named from a book of Catholic devotion—there are copies extant of some, as early as 1539. *

PRIMOGENITURE, a usage from feudal times of barbarism, unknown in England before the reign of William the Conqueror, 1068; before that, the more rational mode of gavel-kind prevailed under the Saxons, by which estates were equally divided among the sons.

PRINTING, the most important of all the mechanical arts, and the most generally useful. The honour of the invention has been claimed by several countries and by different cities, but it appears to rest between Strasburgh, Mentz, and Haarlem; the Chinese had the invention long before the inhabitants of Europe. Koster of Haarlem used wooden blocks in 1430 or 1438—the leaves, when printed on, were pasted together, as they were only printed on one side. Faust or Fust printed a book at Mentz, in 1442; Guttenberg seems to have been the first who cut metal types, and printed a Bible with them, 1444-60; the honour of completing printing is due to Schœffer, as he cast the first metal types; printing with wood types, introduced at Oxford, from Haarlem, 1459. Next to the types, the press was of most importance. The construction seems

to have been nearly the same up to the commencement of the 19th century. Caxton introduced a press into London, 1471; he died, 1494. "The Game and Play of Chesse" was the first book printed in England; the press improved by Blaess, Amsterdam, 1601, and the earl of Stanhope's press first used in 1806; Koenig introduced a printing machine in 1811, and Applegarth subsequently; the Columbian press of Clymer, appeared in 1814;

and the Albion, an improvement, soon after. Steam machinery was first attempted by Koenig, for "The Times" paper and Bensley—and first used for that paper, Nov. 28, 1814, after an expense of £20,000, in bringing it to a working condition: Rollers were substituted for balls in 1817, by Cooper and Applegarth. The following will shew the dates of some of the earliest works printed in England.

PRINTING HOUSE, so called, one in Ipswich in Cardinal Wolsey's time, 1538; John Oswen, printer.

PRINTERS, Master, these were limited in number, by the Star-chamber of Charles I., 1638; again, under William III., 1693; act expired, 1794.

PRESSES licensed by Pitt, and printers' name to be affixed in the first and last pages of a book, July 1799.

PRINTERS accused of libels. Redmayn, for printing "The State of Schism in the Church of England truly stated," written by the Rev. L.

Howel, sentenced to pay £300, to be imprisoned 3 years, or, till his fine was paid, to be bound in £1000 and 4 sureties for good behaviour for life; to lose his gown by the executioner's hand, and to be twice whipped—thus did the judges in the reign of George I., emulate those of Charles I. and his Star-chamber; Dalton, Dec. 1716; Mist, July 1718; Matthews hanged, Oct. 30, 1719; Mist, Feb. 20, 1721; Redmayn, July 2, 1722; Richard Phillips, July 2, 1723; Mist and Payne, July 8, 1724; Franklyn, for a libel in the Craftsman, Dec. 28, 1727; Knell and Clark stood in the pillory, protected by the mob, for libel in printing off Mist's Journal, one being a pressman the other a compositor, journeymen, Aug. 24, 1729; Franklyn, July 20, 1731; Henry Haines, May 13, 1738, for printing the Craftsman, that being adverse to the Walpole administration; the libels generally political. These afterwards diminished in number, until the reign of George III., the celebrated prosecution of Wilkes, 1763; of Woodfall for Junius' letters, 1769, 1770; between 1790 and 1801, under the Pitt administration, they became very numerous; from 1801 to 1807 there were fourteen only; under the Perceval administration in three years, 42 ex-officio informations against printers were filed, and 14 carried on to trial.

PRINTS and Books, duties on; by the 7 and 8 Victoria, chap. 73, 1844, entitled "An Act to Reduce, under certain circumstances, the Duties payable upon Books and Engravings," her Majesty, by order in council, may reduce the duties on foreign books and prints, in cases in which copyright is allowed to the country of export, under 7 and 8 Victoria, cap. 12; and may reduce the duties on books and prints, in favour of countries with which her Majesty has treaties of reciprocity. Schedule of New Duties.—Books:—Works in the language or lan-

guages of the country of export, originally produced therein, or original works of that country in the dead languages, of other works in the dead languages, with original commentaries produced in that country, 15s. per cwt.; all other works published in the country of export, if printed prior to the year 1801, 20s. per cwt.; if printed in or since the year 1801, 50s.; prints or drawings, plain or coloured, $\frac{1}{2}$ d. each; prints or drawings, bound or sewn, $\frac{1}{2}$ d. the dozen.

PRINTSELLERS' property secured by act of parliament, 1777.

PRIORS, Three, executed, 1534.

PRIORIES existed in England, 722; the alien priories seized upon by Edward I., 1215, when a war broke out between France and England—generally seized on the breaking out of war they were restored at the return of peace; 110 dissolved and their estates vested in the crown by Henry V., 1414.

PRODUCE, Agricultural, in France; that of the forty-eight departments, situated to the east of the meridian of Paris since 1830; this eastern half comprises more than 16 millions of hectares, and

nearly 16 millions of inhabitants; it is divided into 177 arrondissements, and 19,000 communes. More than a third of the surface is occupied by different crops, and nearly one half, if nursery grounds, osier grounds, and fallow lands be included. The gross average produce of corn is 84½ millions of hectolitres per annum; of potatoes, 55 millions; and dry vegetables two millions. Vineyards occupy 900,000 hectares of the soil, and produce upwards of 20 millions of hectolitres per annum, valued at 231 millions of francs, or 263 millions, including the brandy. There are annually made in the same district 3,360,000 hectolitres of beer, and 461,000 of cider. Beet-root occupies under 37,000 hectares; cloverseed, 116,000 hectares; textile plants (flax, hemp, &c.), more than 100,000 hectares. Mulberry-trees only lately introduced, 42 millions of francs in produce, of which they are the primary source. The annual value average:—

PROTESTANTS, name first used, 1529.

PROTESTANTS in the minority in the diet of Spire, April 17, 1530, when the decree for supporting the doctrines of the church of Rome was protested against; hence the term Protestants given to the Reformers. They were tolerated in Germany, 1624; in Bohemia, 1707; in Hungary, 1784; in France, 1792; in Portugal, 1801.

PROTESTANT Dissenters petition against Lord Sidmouth's bill, 1811; six hundred petitions presented, May 21, signed by 100,000 males in 48 hours.

PROTESTANT Association, a body formed to prevent religious and civil liberty being granted to the

Catholics; they petitioned parliament, and collected an amazing number of the lowest of the populace to support them; they were headed by Lord George Gordon, a fanatic bigot; the result was that the most flagrant outrages were committed, from June 2 to 7, 1780, and a number of chapels and houses burned or plundered.

PROTESTANT Colonization Society, Irish, established in Dublin, Dec. 1829.

PROTESTANT Conservative Society of Dublin, an Orange association, formed Dec. 1831, but of small hold on the public mind, being wholly a political foundation.

PROTESTANTS, £15,000 allowed to the French, expelled by George I., 1718; persecuted at Thours, in Poland, Nov. 1724; protected by the emperor and king of Prussia, 1731; a protestant minister hanged for assembling a congregation in France, 1732; in Bohemia, many persecuted, 1735; leave Bohemia for Georgia, and settle there, 1735; the number in Ireland, 96,067 families, Nov. 1741; persecuted again in France, 1752; the name first used in 1529; first took refuge in England, 1572; became formidable in France, 1576; their successors protested against, 1700.

Q

QUACK, from the Dutch word "quacken," a goose, applied to pretenders in medicine, in England more especially encouraged; quack medicines taxed in 1783, and the tax increased 1803; a notorious quack, named St. John Long, was tried for manslaughter of a Miss Cashin, Aug. 21, 1830, and found guilty; he was subsequently tried for the same offence in relation to Mr. C. Lloyd, and got off, Feb. 19, 1831; this quack was supported by persons who, from their position in life, might be supposed better informed.

QUADRANT, the mathematical instrument introduced into scientific usage before the birth of Christ; the quadrant of Davis produced about 1600; Hadley's quadrant, 1731.

QUADRUPLE Alliance signed between France, Holland, Germany and England, July 22, 1718; also Jan. 8, 1744-5.

QUAKERS, or Friends, first appeared as a religious sect in 1650; as a body most respectable; they conduct themselves in close accordance with the original tenets of Christianity, repudiating the wars of ambition or territorial acquirement, in which other sects demanding to be esteemed Christians unhesitatingly engage; tolerant and non-persecuting they were persecuted by the intolerant, until the superior civil government of recent times secured religious freedom to all men; the quakers in England regarded George Fox as their leader; the names of Penn, Keith, and Barclay were equal to the members of any

other sect in piety and worth; their first meeting-house in London was in Fenchurch Street, and they were recognised in Dublin, 1692; their affirmation in place of an oath allowed to be taken, 8 Will. III. 1696; altered in 1702 and 1721; secured from oath on holding offices, 1828; with other sects, 1837 and 1838.

QUAKERS, Persecution of, in England by the Church, for tithes and offerings claimed to pay for the promulgation of tenets they did not profess; no fewer than 2,000 suffered fines and imprisonment, 1660; above 120 were transported to America by Charles II., 1664; soldiers were ordered to force them on board ship, but the Dutch captured the vessel, and all but 28 died of the plague in Holland, few of these last ever reaching America; the first quakers who arrived in Boston, which was founded by refugees from religious persecution, were females, but such is theological rancour invested with power, that even those poor women were cruelly flogged and their ears cut off; Quakers admitted into parliament 1833; one was chosen 1698.

QUALIFICATION Act for members of parliament, passed 1711; the same for justices of the peace, 1732.

QUARANTINE, the act of separating persons supposed to be afflicted with pestilential diseases from the rest of society for a longer or a shorter time, to prevent the spread of the contagion, first adopted at Venice in 1127; considered in the present day to be of little effect, as in the case of Asiatic cholera.

QUARTER SESSIONS, courts established, 34 Edward III., appointed quarterly 1413; times of holding once more regulated by statute, 1 Will. IV.; 1830.

QUATRE BRAS, Battle of, June 16, 1815, between the allied army and British under Sir Thomas Picton, and the French under Marshal Ney; the Duke of Brunswick fell in this indecisive action.

QUEEN Anne's Bounty, act to consolidate, 1838; what was called the queen's bounty, which was an annual gift of £1000, with the collection upon the king's letter, ceased 1829, having commenced with the beginning of the reign of George III.

QUEEN Caroline, trial of, July 5, 1820; early censured under an ill-fated marriage to a profligate

husband; ignorant of the true meaning of many words in the English language, and bred up in German habits, this queen still was styled the delight and charm of the circle in which she moved, by Canning, who would not suffer the dark intrigues of those who thought to recommend themselves to royalty to influence his mind; the insinuations against her began in May, 1806, when she was fully proved to be innocent of the charges whispered against her; once more her conduct, while on her travels, surrounded by spies and home-agents, was made the subject of investigation, and she met the charges after a private committee had reported, and a bill of pains and penalties been brought in, July 5, 1820; on a division, with all the power of the court against her, there was a majority of 9, exactly the number of the ministers; in consequence, Lord Liverpool moved that the bill be read that day six months; there was great exultation throughout the country—the queen went in state to St. Paul's, Nov. 29; she protested against her exclusion from the coronation, July 18, 1821; was taken ill July 30, the same year, and died Aug. 7; a riot took place in consequence of the government opposing the desire of the public for the body to pass through the city, Aug. 14, 1821.

QUEENS of England, the following are the queens of England who have reigned of their own right, and been consorts of the crown either before or during their accession; *Matilda*, daughter of Baldwin, Earl of Flanders; she was married in 1051 to William I., and died 1084; *Matilda*, daughter of Malcolm III., king of Scotland; she was married to Henry I., Nov. 11, 1100, and died May 1, 1119; *Adelais*, daughter of Godfrey, earl of Louvaine; she was married Jan. 29, 1129, and survived the king; *Maude* or *Matilda*, daughter of Henry I., and rightful heir to the throne, born

1101; betrothed in 1109, at eight years of age, to Henry V., emperor of Germany, who died 1125; she married, secondly, Geoffrey Plantagenet, earl of Anjou, 1130, was set aside from the English succession by Stephen, 1135; landed in England and claimed the crown, 1139; crowned, but was soon after defeated at Winchester, 1141; concluded a peace with Stephen, which secured the succession to her son, Henry, 1153; died, 1167; *Matilda*, daughter of Eustace, count of Boulogne; she married Stephen in 1128, and died May 3, 1151; *Eleanor*, the repudiated queen of Louis VII., king of France, and heiress of Guienne and Poitou; she was married to Henry II., 1152, and died 1204; *Berengaria*, daughter of the king of Navarre; she was married to Richard I., May 12, 1191, and survived the king; *Avisa*, daughter of the earl of Gloucester; she was married to John in 1189, and divorced; *Isabella*, daughter of the count of Angoulême; she was the young wife of the count de la Marche; married to John in 1200; survived the king, on whose death she was remarried to the count de la Marche; *Eleanor*, daughter of the count de Provence; she was married to Henry III., Jan. 14, 1236; survived the king, and died in 1292, in a monastery, whither she had retired; *Eleanor* of Castile, queen of Edward I.; she was married in 1253, and died of a fever on her journey to Scotland, at Hornby, in Lancashire; secondly, *Margaret*, sister of the king of France; she married, Sept. 12, 1299; survived the king; *Isabella*, daughter of the king of France; she was married to Edward II., in 1308; on the death, by the gibbet, of the favourite Mortimer, she was confined for the rest of her life in her own house, near London; *Philippa*, daughter of the count of Holland and Hainault; she was married to Edward III., Jan. 24, 1328, and died Aug. 16, 1369; *Anne* of Bohemia, sister

of the emperor Wincelras of Germany; she was married to Richard II., in Jan. 1382, and died Aug. 3, 1395; secondly, *Isabella*, daughter of Charles VI. of France; she was married Nov. 1, 1396; on the murder of her husband she returned to her father; *Mary*, daughter of the earl of Hereford; she died before Henry obtained the crown, in 1394; *Joan* of Navarre, widow of the duke of Bretagne; married to Henry IV. in 1403; survived the king, and died in 1437; *Catherine*, daughter of the king of France; she was married to Henry V. May 30, 1420; she outlived Henry, and was married to Owen Tudor, grandfather of Henry VII.; *Margaret*, daughter of the duke of Anjou; she was married to Henry VI., April 22, 1445; she survived the unfortunate king, her husband, and died in 1482; *Lady Elizabeth Grey*, daughter of Sir Richard Woodville, and widow of Sir John Grey of Groby; she was married to Edward IV., March 1, 1464; suspected of favouring the insurrection of Lambert Simnel, closed her life in confinement; *Anne*, daughter of the earl of Warwick, and widow of Edward prince of Wales, whom Richard had murdered; she was married to Richard III., 1471; she is supposed to have been poisoned by Richard (having died suddenly, March 6, 1485), to make way for his intended marriage with the princess Elizabeth of York; *Elizabeth* of York, princess of England, daughter of Edward IV.; she was married to Henry VII., Jan. 18, 1486, and died Feb. 11, 1503; *Catharine of Arragon*, widow of Henry's eldest brother, Arthur prince of Wales; she was married to Hen. VIII., June 3, 1509; was the mother of Queen Mary—was repudiated, and afterwards formally divorced, May 23, 1533; died Jan. 6, 1536; *Anna Boleyn*, daughter of Sir Thomas Boleyn, and maid of honour to Catharine; she was privately mar-

ried before Catharine was divorced, Nov. 14, 1532; was the mother of queen Elizabeth; was beheaded at the Tower, May 19, 1536, to make way for *Jane Seymour*, daughter of Sir John Seymour, and maid of honour to Anna Boleyn; she was married May 20, 1536, the day after Anna's execution, and was the mother of Edward VI., of whom she died in childbirth, Oct. 13, 1537; next came *Anne of Cleves*, sister of William, duke of Cleves; she was married Jan. 6, 1540; was divorced July 10, 1540, and died in 1557; *Catharine Howard*, niece of the duke of Norfolk, married Aug. 8, 1540, and was beheaded on Tower Hill, Feb. 12, 1542; then Henry married *Catharine Parr*, daughter of Sir Thomas Parr, and widow of Nevill, lord Latimer; she was married July 12, 1543, and survived the king, after whose death she married Sir Thomas Seymour, created lord Sudley; died Sept. 5, 1548; *Lady Jane Grey*, daughter of the duke of Suffolk, and wife of lord Guildford Dudley, was proclaimed queen on the death of Edward, but in ten days afterwards returned to private life; was tried Nov. 13, 1553, and beheaded Feb. 12, 1554, when but seventeen years of age; *Mary*, the daughter of Henry VIII., ascended the throne July 6, 1553; married Philip II. of Spain, July 25, 1554, and died Nov. 17, 1558; *Elizabeth*, daughter of Henry VIII., succeeded to the crown Nov. 17, 1558; reigned 44 years, 4 months, and 7 days; died unmarried; *Anne*, princess of Denmark, daughter of Frederick II.; she was married to James I., Aug. 20, 1589, and died March, 1619; *Henrietta-Maria*, daughter of Henry IV., king of France; she was married to Charles I., June 13, 1625, and survived the king, dying in France, Aug. 10, 1669; *Catharine*, infanta of Portugal, daughter of John IV., and sister of Alfonso VI., was married to Charles II., May 21, 1662, and, surviving the king,

returned to Portugal, dying there, Dec. 21, 1705; *Anne Hyde*, daughter of Edward Hyde, earl of Clarendon; she was married to James II., in Sept. 1660, and died before James ascended the throne, in 1671; *Mary-Beatrice*, princess of Modena, daughter of Alphonzo d'Este, duke; she was married to James II., Nov. 21, 1673; at the revolution in 1688, she retired with James to France, and died at St. Germain in 1718, having survived her consort seventeen years. *Mary*, princess of Orange, daughter of James II., married William III., Nov. 4, 1677; ascended the throne, Feb. 13, 1689; died Dec. 28, 1694; *Anne*, daughter of James II., married prince George of Denmark, July 28, 1683; came to the throne, March 8, 1732; had 13 children, who all died young; Prince George died Oct. 28, 1708; the Queen herself, Aug. 1, 1714; *Sophia Dorothea*, daughter of the Duke of Zell, who died Dec. 2, 1726; in jealousy of Count Konigsmark and this lady, upon no valid grounds, the Elector of Hanover, afterwards George I. of England, had him privately murdered; after the king's death, his body was found under the Queen's apartments; at last the king sought out a reconciliation, but the Queen nobly replied—"If I am guilty of what he accuses me, I am unworthy of his bed; if I am innocent, he is unworthy of me." She died a few months before the accession of her son, George II., to the throne, Nov. 2, 1726, otherwise he fully intended to free her from the castle of Ahlden, and openly do her justice by acknowledging her as Queen-dowager; *Carolina Wilhelmina Dorothea* of Brandenburg-Anspach, born 1683; married, Sept 2, 1704, to George II.; died Nov. 20, 1737; *Charlotte Sophia*, daughter of the Duke of Mecklenburg Strelitz, married Sept. 8, 1761, to George III.; died Nov. 17, 1818; *Caroline Amelia Augusta*, daughter of the Duke of Brunswick, married to George IV., April 8, 1795; died

Aug. 7, 1821; *Adelaide Amelia Louisa Teresa Caroline*, sister of the Duke of Saxe-Meiningen, married to William IV. of England, July 11, 1818; died Dec. 2, 1840. *Alexandrina Victoria*, Queen-regnant, 1853, born May 24, 1819; crowned, June 28, 1838; married her cousin, Prince Albert of Saxe-Coburg Gotha, Feb. 10, 1840.

QUEEN, transport, wrecked at Falmouth, and 369 out of 473 persons on board perished, Jan. 1814.

QUEEN Charlotte man of war, 100 guns, burned off Leghorn, March 16, 1800, when out of 850 on board nearly 700 perished.

QUEEN, Indianan, blown up in the Brazils, July 14, 1800.

QUEEN'S College, Cambridge, founded 1449.

QUEEN'S College, Oxford, founded 1397; fire at, which greatly injured one wing, Dec. 18, 1778.

QUEEN'S Ware invented by Wedgwood, 1760.

QUEENSTOWN, Upper-Canada, on the Niagara river, taken in the last American war by the United States' army, Oct. 13, 1812, and retaken by the British the same day, with considerable loss to the Americans.

QUESNE, Fort Du, in North America, taken by General Forbes, Nov. 24, 1758.

QUESSNOY, Battle of, between the English and French, in which the latter were defeated, Sept. 11, 1793; taken by the Austrians, 1793; retaken by the French the next year; surrendered to Prince Frederick of the Netherlands, June 19, 1815.

QUIBERON, France, repulse of an English expedition to, 1746; a victory of Admiral Hawke over the French in the bay of, Nov. 20, 1759; taken possession of by emigrant regiments in British pay, July 3, 1795; surprised and retaken by the republicans, July 21, and many of the emigrants taken were executed; 900 soldiers and 1200 of the inhabitants effected their re-embarkation, but the rest fell

into the enemy's hand, with all the stores and ammunition landed; it is said that the forged assignats made in England for the purpose, were introduced with this expedition under the idea of injuring the French finances in place of the innocent holders.

QUICKSILVER, a metal in a liquid state except at an exceedingly low temperature; when it congeals readily; first used in refining silver, 1540; it is found in Spain, Carniola, Ceylon, and one or two other places; congealed in England artificially, 1787.

QUIETISTS, a sect originating with Molinos, an ecclesiastic of Saragossa, in Spain, that made some noise about 1678; they imagined that the purity and essence of religion consisted in silent internal meditations upon, and recollections of, the merits of Christ and the mercy of God; Madame Guion of this sect was imprisoned in the Bastille for her devotion to this doctrine, and released through

the intercession of the good Fenelon, archbishop of Cambray, who had a dispute with Bossuet, bishop of Meaux upon the subject, 1657.

QUILLS first used for pens, 635; reeds were used previously; metallic pens threaten to supersede these, 1830.

QUINCE, the fruit first brought into England, as is reported, from Austria, in the 16th century; a species was introduced from Japan, 1796.

QUINTILIANS, a sect that arose in the second century, the followers of Montanus; it allowed women to be priests and bishops.

QUINTIN, Battle of St., between the Spaniards and English, and the French, when the latter were defeated; this victory, owing to a vow before the engagement, caused Philip II. to build the Escorial, Aug. 10, 1557.

QUITO, in Peru, swallowed up by an earthquake, April 24, 1755, when 40,000 persons perished.

R

RAAB, Hungary, taken by Turkey, 1594; retaken 1598.

RABY Castle, Durham, built 1020.

RACES originated in England, among the London citizens, in very early times; races were known at York in 1607; Charles II. gave a cup of the value of 100 guineas; an act took place for suppressing races with ponies and weak horses in 1739; the object then seems to have been useful in improving the breed of horses, and plates were given in several places; this object was fully attained, as the English breed of horses of all kinds fully proves; running horses without regard to bottom or strength succeeded, merely for gambling purposes, to which and no other end they now exist; when the more legitimate object was passed, the perfection to which the noble animal was brought, seem-

ed almost impossible of attainment in a northern climate; as to speed, Childers ran over at Newmarket three miles six furlongs and 93 yards in six minutes and forty seconds; and four miles one furlong and 138 yards in seven minutes and thirty seconds, carrying 9 stone 2lbs., he died in 1741, aged 26; Eclipse was nearly equal to Childers, and was never beaten. In 1772, a mile was run by Firetail in one minute and four seconds. In October, 1741, at the Curragh meeting in Ireland, Mr. Wilde engaged to ride 127 miles in nine hours; he performed it in six hours and 21 minutes. He employed ten horses, and allowing for mounting and dismounting, and a moment for refreshment, he rode for six hours at the rate of 20 miles an hour. Mr. Thornhill, in 1745, exceeded this, for he rode from Lon-

don to Stilton and back, and again to Stilton, being 213 miles, in 11 hours and 34 minutes, which is, after allowing the least possible time for changing horses, 20 miles an hour for eleven hours, and on the turnpike road and uneven ground. Mr Shaftoe, in 1762, with ten horses, and five of them ridden twice, accomplished fifty miles and a quarter in one hour and forty-nine minutes. In 1763 he won a more extraordinary match. He was to procure a person to ride one hundred miles a day, on any one horse each day, for twenty-nine days together, and to have any number of horses not exceeding twenty-one. He accomplished it on fourteen horses; and, one day, he rode one hundred and sixty miles, on account of the tiring of his first horse. Mr. Hull's Quibbler afforded the most extraordinary instance on record of the stoutness as well as speed of the race-horse. In December, 1786, he ran twenty-three miles, round the flat at Newmarket, in fifty-seven minutes and ten seconds.

RACK, an instrument of torture of great antiquity; though torture to extort confession was declared illegal by law, the officers of the crown had no hesitation at using it on the royal command, and without; in *temp.* Chancellor Wriotesly, in 1546, when the beautiful Anne Askew, charged with favouring the Reformation, refused to implicate any ladies at court with participating in her creed, she was ordered to be tortured, and when the lieutenant of the Tower refused to rack her more, the chancellor worked the instrument himself until her joints were dislocated; she was then condemned to the stake by this miscreant lawyer, and executed in Smithfield, July 16, 1646; in the reign of Charles I., the

court wanted it to be applied to Felton, the assassin of Charles's minion, but the judges had returned to their sense of duty, and declared it was unlawful.

RADCLIFFE Library, Oxford, founded by Dr. Radcliffe, physician to Queen Anne, leaving £40,000 to the university for that purpose; the edifice was finished in 1749.

RADCLIFFE, Statue erected to Dr. John, at Oxford, 1723.

RADNOR Forest destroyed by fire, Aug. 1600.

RADZIVILLE, in Galicia, nearly all burned, May 5, 1804.

RADSTADT, Peace of, between France and the Emperor, March 6, 1714.

RADSTADT, Congress of, to treat of a general peace, Dec. 9, 1797; the negotiation endured for the entire year; an atrocious assassination of the French plenipotentiaries was perpetrated here in cold blood by the Austrian regiment Szelztler, April 21, 1799.

RAGUSA besieged by the Russians, July 12, 1806.

RAGUSA and Dalmatia annexed to the kingdom of Italy by Napoleon, July 16, 1807.

RAGUSA taken by the Austrians, Dec. 27, 1813.

RAID of Ruthven, at which James I. was seized by the nobles of Scotland, Aug. 22, 1582.

RAILROADS, the first of any moment for the carriage of heavy weights or goods, was laid down in Coalbrooke Dale, Shropshire, 1786; the first, for the same purpose, laid down by act of parliament, was that in Surrey, from Wandsworth to Croydon, 1801; the Liverpool and Manchester, the first passengers' railway, was begun Oct. 1826, and finished so as to open on Sept. 15, 1830.

Turnpike roads and paved streets, - - - -	Miles 19,725
Other public highways, -	95,104

Total 114,829

The returns were made from surveyors of the roads, and were 16,956 in number: in 1829, there were in England and Wales 20,875 miles of turnpike; and in Scotland 3,666. Total 24,541 miles. Yorkshire had 1448 miles of turnpike in 1829; Rutland, 18. There were 1,116 turnpike trusts, of about 22,000 miles in all, in 1840. Number of toll-gates and side-bars are about 7,796. The officers employed consist of treasurers, clerks, and surveyors; of the former, 1,120; the number of clerks, 1,135; that of surveyors about 1,300; total, 3,555. The average extent of each turnpike trust about 19 miles, 5 furlongs, 28 poles, and 1 yard. The number of local turnpike acts about 3,800. On an average of five years, the money expended on account of repairs, &c., of the turnpike roads, including manual labour, &c., was 989,545*l.* per annum, or 45*l.* per mile per annum; and the money expended on account of management, consisting of the salaries and law charges, about 129,124*l.* per annum, or 6*l.* per mile per annum. The money expended in manual

labour, team labour, and carriage of materials, and for materials for surface repairs, is about 36*l.* per mile per annum, and in improvements 9*l.* per mile per annum. The annual amount of the repair of turnpike roads and management of trusts, 51*l.* per mile per annum, 1,122,000*l.* The amount of the mortgage debt in 1829 was 6,578,815*l.*; in 1834, 7,008,275*l.*; in 1835, 7,116,792*l.*; in 1836, 7,187,543*l.*; in 1837, 7,262,962*l.*; and in 1838, 7,260,993*l.* A sum of 263,250*l.*, included in the amount, is unpaid interest converted into principal. The number of mortgages 42,637; and the number of assignments of mortgages, 18,519. The amount of money belonging to charities, invested on the security of turnpike bonds, appears, from the report of the charity commissioners, to be 62,959*l.* 3 : 2; the unclaimed dividends in the hands of the treasurers of turnpike trusts were, on Dec. 31, 1839, 39,530*l.* 1 : 11. The money paid for interest on account of the mortgage debt, from 1834 to 1838, averaged about 300,000*l.* per annum. In eighty-two trusts in England, and two in Wales, no interest had been paid for several years. The amount of tolls received in the years 1834, 1835, 1836, 1837, and 1838, was, on an average, about 1,458,285*l.* per annum; and the funds arising from fines and other incidental profits (not including statute duty, or composition in lieu thereof, and money borrowed), was about 32,232*l.* per annum: total, 1,490,517*l.* per annum.

		From 537 to 553 the empire was recovered, lost, and again recovered, by the Eastern emperors—it finally revolted from the Greek emperors in 756, and became, from that time, subjected to the most degrading rule of the popes, of whom 176	

succeeded Pope Stephen II., the first of the number. Thus, the popes made independent, continued in possession of this renowned city and its territories, called the ecclesiastical states, till 1798.—St. Peter's Cathedral was built by Pope Julius II., who died 1512; Bramante was the architect.—The inhabitants of Rome, on the 4th June, 1780, amounted to 155,184, of whom 36,485 were housekeepers.—In this number were included 3947 monks, 2327 secular priests, 1910 nuns, 1065 students, 1470 paupers, 7 negroes, and 52 persons not Romans.—Reduced by the French to a republic, and the Pope Pius VI sent from Rome, 1798. ROMAN Catholic Penal Laws of extraordinary rigour had been passed against those of the Catholic faith, *see* Penal Laws: these were first passed by Henry VIII., who called himself Defender of the Faith, 1539; Catholics were forbidden to appeal at court, 1673; in 1685 they were restored to their privileges; they were disabled from holding offices of trust, 1689; obliged to register their names and estates, 1717; some relaxations of these hard conditions took place, 1778, and they were permitted to purchase land and take it by descent, 1780; yet these trivial concessions caused a riot, headed by Lord George Gordon, 1780, and dreadful excesses followed, the riot proving, from the time it took, that plunder and devastation were more objects in the view than difference of creed; more of the Catholic disabilities were removed, 1793; and final emancipation followed, April 13, 1829. Divisions in the House of Commons, 1829,—

March 6, Majority for going into Committee 188
 " 18, " for second reading 180
 " 30, " for third reading 170

In the House of Lords,

The royal assent took place, April 13, 1829: Mr. O'Connell, the first Catholic member, took his seat for Clare, July 5, 1829; the first English Catholic member was the Earl of Surrey, for Horsham, May 4th, 1829.

ROMAN Catholic Faith; the precise date of the foundation of this creed is uncertain: some give it to the time when Constantine made such an adroit use of the Christians to aid in his conquests, or A. D. 323. Others date it from Boniface III., 606, when he assumed the title of universal bishop; this, however, only applies to the title of its head. The reformation first shook its power.

Of 225 millions of Christians, the Catholics are estimated to be 160 millions.

ROMAN Catholic Association, a society established in Ireland to remove the disabilities to which the Roman Catholics were subjected in regard to their civil rights: there had been other societies previously, to promote the same object; but an act of parliament was passed to suppress it, March 5, 1829, after the disabilities which it was its object to remove were no more: the society had previously voted its own dissolution, Feb. 12, 1829.

ROMAN Catholic Clergy and People in Ireland: In 1841, the popu-

lation being 8,175,000, those of the Roman Catholic church were estimated at 6,550,000; the number of their clergy was not known, but in 1704 there were 1000 registered at the council office, in Dublin castle; it must be many times more at present.

RUSSIA, incidental history of, the origin of the nation obscure as to its early records; Novogorod and its grand dukes are mentioned in the earliest attainable accounts of the country, in the year 882; the first Christian ruler is said to have been Waladimir, 981; Moscow was founded by a king called Audrey, 1156; the Tartars conquered Russia in 1200, and held possession of it down to 1440, when their yoke was thrown off by Ivan Basilovitz. Silesia was added to the Russian rule in the sixteenth century. The present monarchy is said to have had its foundation laid about 1474, while it was yet under the Tartars. Ivan, successful in restoring his country to its own rule, took the title of czar; he drove out the Tartars entirely, between 1534 and 1550; the principal incidents since that period embrace all that can be relied upon in relation to this great empire.

SARK, one of the Channel islands, dependent upon Guernsey, six miles in compass; it has the benefit of a commodious haven, which the French observed in 1557; it was without men to defend it but a few hermits, whom the privacy of the place had invited. The island begirt with rocks, lying aloft above the sea, having only one strait passage or ascent up to it, scarcely capable of receiving two abreast. Of this island the French easily possessed themselves, dislodged the hermits, fortified the upper part of the ascent with some pieces of ordnance, and settled a small garrison in it. They had not nestled there long, when by a gentleman of the Netherlands, one of the subjects of King Philip, it was regained. The Flemish gentleman in a small bark came to anchor in the road, and

pretending the death of his merchant, besought the French that they might bury him in the chapel of that island, offering a present to them of such commodities as they had on board. To this request the French were easily entreated, upon condition that they should not come on shore with any weapon. The Flemings rowed on shore with a coffin in their skiff filled with swords and arquebusses. They were permitted to draw the coffin up the rocks; some of the French, rowing back to the ship to fetch the present, were soon made fast enough. The Flemings in the mean time who were on the land, had carried their coffin into the chapel, and having taken thence their weapons, gave an alarm. The French, caught upon the sudden, and seeing no hopes of succour from their fellows, yielded themselves. Taken by the English, as part of their old Norman dominion, 1589.

- SHOES.—In the 9th and 10th
centuries, the greatest princes of Eu-
rope wore wooden shoes, or the
upper part of leather and the sole
of wood. In the reign of William
Rufus, a great beau, named Robert,
surnamed the *Horned*, used shoes
with long sharp points, stuffed with
tow, and twisted like a ram's horn.

The points continued to increase, till, in the reign of Richard II., they were of so enormous a length that they were tied to the knees with chains, sometimes of gold, sometimes of silver. The upper parts of these shoes in Chaucer's time, were cut in imitation of a church window. The high pointed shoes continued in fashion for three centuries, in spite of the bulls of the Popes, the decrees of councils, and the declamations of the clergy. At length the parliament of England interposed by an act, A.D. 1463, prohibiting the use of shoes or boots with peaks exceeding two inches in length, and prohibiting all shoemakers from making them with longer peaks, under severe penalties. But even this was not sufficient; it was necessary to pronounce the dreadful sentence of excommunication against all who wore shoes or boots with points longer than two inches: they were to be cursed by the clergy, 1467. The present fashion of shoes was introduced in 1663, but the buckle was not used till 1670. •

SHOEING HORSES first introduced into England 481.

SHORLIVING Act passed; 1699; since repealed.

SHOR TAX, levied first by Pitt in 1785; the commotion it caused forced its repeal, 1789.

SHORE, Jane, mistress of Edward IV., no favourite of the clergy, and therefore made to do penance, 1483; she was imprisoned but restored to freedom by Richard III., 1484, when she married Thomas Highmore.

SHOREHAM Suspension Bridge, opened May 2, 1833.

SHORT-LIVED Administration, a term given to that of William Pulteney, Earl of Bath, which only lasted two days; dissolved Feb. 12, 1746.

SHOULDER knots first worn in the reign of Charles II.

Snow, the Lord Mayor's of London, rest of old usages, its past

illnesses in modern eyes, have only left remaining in the present century that part: the poor men of the company to which the lord mayor belongs, habited in long gowns and close caps of the company's colour, bearing painted shields on their arms. So many of these head the show as there are years in the lord mayor's age. Their obsolete costume and hobbling walk are sport for the unsexate, who from imperfect tradition, year after year, are accustomed to call them old bachelors. The numerous band of gentlemen ushers in velvet coats, wearing chains of gold and bearing white staves, is reduced to half a dozen full-dressed footmen, carrying umbrellas in their hands. Even the giants in Guildhall, placed on octagon columns, to watch and ward the great east window, stand unrecognized except in their gigantic capacity. Before the present giants inhabited Guildhall, there were two giants made only of wicker-work and pasteboard, put together with great art and ingenuity: and those original giants had the honour yearly to grace the lord mayor's show, being carried in great triumph in the time of the pageants: and when that eminent annual service was over, remounted their old stations in Guildhall, till, by reason of their very great age, old Time, with the help of a number of city rats and mice, had eaten up all their entrails. Until the reparation of Guildhall, in 1815, the present giants stood with the old clock and a balcony of iron-work between them, over the stairs leading from the hall to the courts of law and the council chamber. They are made of wood, and hollow within, and, from the method of joining and gluing the interior, are evidently of late construction; too substantially built for the purpose of being either carried or drawn, or any way exhibited in the show of 1853.

SHREWSBURY, church of St. Chad,

destroyed by the tower falling, July 11, 1788; fire at, consumed 50 houses, April 1, 1774.

SHREWSBURY, Monastery of, built 1033; castle built, 1084.

SHREWSBURY, Battle of, between Henry Hotspur and Henry IV. Hotspur was slain and Henry wounded, 2300 gentlemen and 6000 private men fell, July 21, 1403.

SHROVE Tuesday, a feast of pancakes in Lent, when all sorts of wanton recreations were indulged, if the priest were obeyed, and hence came the carnival; the festival is recognized as early as 1440.

SIBYLS or Sibyllæ, women who delivered oracular speeches, supposed to be inspired by demons or spirits, consulted by the heathen world before the Christian era, 531 A.C. Subsequently some of the Christians committed forgeries in their own favour, and attributed them to the Sibyls, in order to draw towards them the attention of the Pagan world.

SICK and wounded, and crowded seaman's incorporation, began June 24, 1747.

SICILIAN Vespers, the term given to a massacre of the French, on March 30, 1282, which began at Palermo; the inhabitants had conceived a bitter hatred against Charles of Anjou, and there was a conspiracy against him, which suddenly came to a head by the accident of a Frenchman insulting a bridal procession, and the Frenchman was at once stabbed, the populace rose to arms, and 200 of the French were instantly assassinated; the flame of vengeance was kindled, and 8000 were put to death before they could stand on their defence, the sanctuary of the altar affording them no security. From Palermo the massacre spread throughout the island.

SICILY, the island of, first peopled from Italy, 1292 years before the Christian era; the Sicani and the Etruscans were supposed to be the first inhabitants of the island; the

Carthaginians once possessed it, and the Gauls had colonies there; it was held by a prince of Arragon, who formed a kingdom of it, separated from Italy about 1286.

SIGISMUND, Emperor of Germany, visited England 1419.

SIGNALS at Sea, first used systematically by the duke of York, afterwards James II., 1665.

SILK, Wrought, brought from Persia to Greece, 325 B.C.; from India, A.D. 274; known at Rome in Tiberius's time, when a law passed in the senate prohibiting the use of plate of massy gold, and also for-

bidding men to debase themselves by wearing silk, fit only for women; Heliogabalus first wore a garment of silk, 220; silk-worms were brought to Europe 300 years later; silk at first of the same value with gold, weight for weight, and thought to grow like cotton on trees, 220; the emperor Aurelian, who died in 275, denied his empress a robe of silk, because too dear; silk introduced into Europe by certain monks, 551; some monks who had been in India, in 555, brought from thence silk-worms' eggs to Constantinople, where raw silk was in time produced in abundance, and worked up into manufactures at Athens, Thebes, Corinth, &c. The first record of silk in Britain is of a present by Charlemagne to Offa, king of Mercia, in 780, consisting of a belt and two silken vests. Silk is mentioned in a chronicle of the date 1286; some ladies wore silk mantles at a festival at Kenilworth about that period; and, by other records, we find that silk was worn by the English clergy in 1534. Henry VIII. had the first pair of silk stockings that was ever seen in England, sent to him from Spain; and Edward VI. had a pair of long silk hose from the same country, presented to him by Sir Thomas Gresham (who built the Royal Exchange), a present which was thought much of. In 1130, Greek manufacturers of silk were brought by Roger, king of Sicily, to Europe, and settled at Palermo, where they taught the Sicilians not only to breed up the silk-worms, but to spin and to weave silk, which art was carried afterwards to Italy and Spain, and also to the south of France, a little before Francis I., who brought it to Touraine; Venice inveigled silk-weavers from Greece and Palermo in Sicily, 1207; silk goods were made in England from the time of Edward III., to a small extent; silk mantles worn by some noblemen's ladies at a ball at Ke-

nilworth Castle, in Warwickshire, 1486; silk more extensively manufactured in England, 1604; first silk manufacture in France, 1421; raw silk not produced there for a long time afterwards; silk-worms and mulberry-trees propagated by Henry IV. through all France, 1589; silk-worms first brought to England, 1609; broad silk manufacture from raw silk, introduced into England, 1620; Lombe's famous silk-throwing machine, erected at Derby, 1719; it contained 26,586 wheels; one water-wheel moves the whole, and in a day and a night it works 318,504,960 yards of organzine silk; silk first imported from Virginia, 1730; from Georgia, 1735; from Persia through Russia, 1742; silk goods imported from India and China into England, 1833, 298,580lbs.; and in 1849, 511,130lbs.; no less than £5,000,000 supposed to be spent on silk within the united kingdom, 1849.

SILK, duties on importation upon raw and thrown, wholly ceased, 1845; the total raw, waste, and thrown silk, imported 1849, was 6,226,179lbs.; in 1765, only 715,000lbs. were imported, under prohibitory duties, and 20 years after, only 881,000lbs.

SILK, British manufactured silk goods exported, 1849, value of, £998,334; employed in this branch of manufacture, 30,682 persons in 1835; in 1839, 33,470 persons; there were 268 mills at work, and 23 empty in the same year.

SILVER Mine discovered in Brittany, Nov. 1730; also in Cornwall, pure; at Hucl, Mexico, 1797, and in numerous combinations with other ores; in the lead of Cumberland and in Devon, 1294; mines of South America, in Peru and Chili, discovered in abundance, as well as in Mexico; in Potosi, 1545; at Cusco, 1712; in 1749, a mass of native silver 370lbs weight sent to Spain; a piece of silver dug up in Norway weighed 560lbs.

SILVER Plate first used in Eng.,

land by Wilfred, a Northumbrian bishop, a lofty and ambitious churchman, 709; silver cups and spoons esteemed great luxuries, 1300.

SILVER raised from 3s. 9d. to 4s. per ounce, 1544.

SIMNEL, Lambert, set up for the crown against Henry VIII; crowned king in Ireland, 1487; pardoned, and made a scullion of in the king's kitchen, and afterwards one of his falconers.

SKIFFON made major-general of the city of London militia, Jan., 1642; ordered to attend the king at York, but declined, May 17; obliged to lay down his arms in Cornwall, 1644.

SIMONIANs, a sect of Christians, so called from Simon Magus or the magician, who was denominated the first heretic; as similar leaders of new and wild doctrines are, he was vain and presumptuous; great numbers followed him, 57; a sect called St. Simonians appeared in France, and was lectured upon in this country together, Jan. 1834; but their leaders had not sufficient extravagance, nor were their doctrines attractive enough to secure multitudinous ignorance.

SIMON, St., and St. Jude's festivals, instituted 1090.

SIMPLON, The, anciently called Mons Cæpionis, is one of the loftiest of the Italian Alps. The new military road was planned by Napoleon in 1801; it extends from Geneva to Milan, a distance of 47½ posts, or 245 miles, and it was finished in 1805, after three years' incessant labour, upwards of 30,000 men being constantly employed in the undertaking, at the joint expense of the kingdoms of France and Italy.

SIMPSON's Hospital, Dublin, for the blind and gouty, founded 1780.

SINGING Psalms, a very ancient practice, which dates from the earliest ages of Christianity, and the time

of the apostles; Pope Gregory refined the church music, and instituted singing schools in Rome, 602.

SINKING FUND, this is said to have been first projected by Sir Robert Walpole; it was carried out by Pitt, who having a surplus of £900,000 increased to £1,000,000, it was to be devoted inviolably to the reduction of the national debt, by an act passed in March 1786; this system was pursued through the whole life of that statesman, and as long as his party remained in power, although no surplus existed, and thus the whole affair became a delusion.

SINCERITY, order of knighthood, founded in Saxony, 1690.

SION House or Abbey, Middlesex, built 1414.

SION College, London Wall, founded 1623, incorporated 1664, on the site of an old nunnery; in 1623, Dr. Thomas White bequeathed £3000 towards a college and almshouses, and the present was erected by his executors, and held by charters of incorporation of Charles I. and II., 1630, 1664.

SIR William Curtis, packet, struck the ground fifty yards outside Ostend pier-head, when Mrs. Carleton, her daughter, and a female-servant were drowned, Oct. 29, 1815.

SIX Clerks' Office, Chancery-Lane, built 1770; they were once forbidden to marry, but in the reign of Henry VIII. permission was given without forfeiture of their places, 1533; they were once called Clerici, like some other lumber of that grievous court: their offices were discontinued, 1842.

SIXTEEN, the Faction of, so named, arose at Paris, 1587.

SIXTUS V., Pope, originally a pig-drover, and made pope 1585.

SKELETON, one dug up in the Isle of Wight, supposed to have been buried 600 years before, 1807.

SKINS, these raw were used in the North of England and Scotland to boil meat in, as late as 1327.

SKIPTON Castle, Yorkshire, built just subsequent to the Norman conquest.

SLAVE, the drudge of the more powerful in the rudest ages of the world, transmitted to more civilized times and nations, who add to its justification by the rule of the strongest, that of self-interest; the slave's injustice tainted most of the ancient nations, and the captives made in war by the Cæsars and Alexanders, were treated in the same way as the savages of Dahomey and Congo treat theirs in the present day; civilised nations that rank highest, have abolished slavery throughout their dominions, and those who partially retain it feel the stigma that attaches to a crime; the power of life and death over the slave was exercised at Rome, under the Cæsars, 50; the English peasantry were sold as slaves in the market in feudal times; children were sold for exportation, by the lords of the land, even as late as the time of Edward VI., and the enactments regarding the treatment of the villein, by this prince, were as harsh as those practised on the blacks in the West Indies within human memory; branding on the breast or face, starvation, beating, chaining, iron rings round the legs, and perpetual slavery, were the Christian bounties on the poor peasant enacted during the reign of him, 1547, who is so much lauded as the establisher of the faith of one who laid down the divine maxim, "do as you would be done unto;" the law of slavery was settled by the Saxon Ina, 622; the Portuguese began it, 1443; the English 1562; the latter possessed the *asiento*, or contract for supplying the colonies of Spain with slaves, 4800 annually, from the treaty of Utrecht to 1748. In some years the slaves from Africa reached 100,000; slaves obtained their freedom by arrival in England, 1772; slavery abolished in Austria, June 26, 1782; slave-trade debated in parliament, 1787; regulated, 1788;

debate for its abolition lasted two days, April, 1791; again, 1792; slavery was abolished in Pennsylvania and Massachusetts, 1793; in France, 1795, 1815; between 1792 and 1807 it was shown to the English government incontrovertibly, that 3,500,000 Africans had been kidnapped and exported from their native shores, to perish at sea, or die of oppression, 1815; the freedom of all British slaves purchased under a special act, and £20,000,000 voted for the purpose by parliament, 1833; slavery was abolished by treaty with Spain, 1817, yet she still winks at it in Cuba; with the Netherlands, May 1818; with Brazil, 1826; the United States of America had previously abolished the trade, though slavery existed still in some of the States; they were first imported into America, 1508; slave trade began with England, 1563; in South America, 1550; abolished by the Quakers, 1784; the whole importation is computed, by Abbé Raynal, to have been 9,000,000 of slaves, at the rate of 60,000 annually; Abbé Raynal also says, that there are in America and the islands of the West Indies, fully 1,400,000. In 1768,

Great Britain purchased	53,100
America	6,300
France	23,500
Holland	11,300
Portugal	8,700
Denmark	1,200

Total 104,100, at about £15 each, which amounts to £1,582,000 sterling, but bought by barter. In 1793, they sold on an average for £30 or £35 each. In 1788, the slaves in the West India Islands belonging to Great Britain, were in

Jamaica	174,000
Barbadoes	80,000
Antigua	36,000
Grenada and the Grenadines.....	40,000
St. Christopher	27,000
Dominica	15,000
St. Vincent	15,000

Anguilla, Tortola,	
&c.	14,000
Nevis	10,000
Montserrat.....	* 9,000

Total 420,000

Sir John Hawkins was the first Englishman who made a traffic of the human species; his first expedition for procuring negroes on the coast of Africa, and conveying them for sale to the West Indies, was in October, 1563. In the year 1786, England employed 130 ships, and carried off 42,000 slaves; such was the extent of British participation in this crime, that at the period of slave emancipation in the British plantations in 1833, the number of slaves, which had been considerably more, amounted to 770,280; the slave-trade question was debated in parliament in 1787; the debate for its abolition lasted two days, in April, 1791; the motion of Mr. Wilberforce was lost by a majority of 88 to 83, April 3, 1798. After other efforts, the question was introduced under the auspices of Lord Grenville and Mr. Fox, March 31, 1806, and the trade finally abolished, March 25, 1807: it was under the auspicious reign of William IV. that the noble act of slave abolition was carried throughout the British empire, and under an administration of which some remained who had assisted, as on this second occasion, in carrying the abolition of the trade: £20,000,000 sterling was paid, and 770,280 of our fellow-men saw the dawn of freedom break upon them—they were slaves no more, Aug., 1834; the opponents of the measure grudged the sum, but £800,000,000 wasted in merciless and useless wars might not inappropriately afford something to the balance on the side of humanity.

SLAVES of Virtue, order of knight-hood so called in Germany, began 1602.

SLIPPERS first came into use in England, 1570.

SLINGSBY, Sir Henry, governor of Hull, and Dr. Hewitt, beheaded on Tower Hill, June 8, 1658.

SLUYS, Naval Battle of, in which Edward III. vanquished the French; 230 French vessels were taken, and 30,000 killed, with 2 admirals; the English loss was very small, June 24, 1340.

SMALLPOX, Hospital for, Cold-bath Fields, began Sept. 26, 1746; inoculation for, introduced 1718 by Lady Mary Wortly Montague.

SMALCALD, Treaty of, Franconia, 1529.

SMOLENSKO, Battle of, between the French and Russians; the former, three times repulsed, at length drove the Russians before them, and entered the smoking ruins of Smolensko, which had been bombarded; the Russians were commanded by Barclay de Tolly, and the battle was one of the most sanguinary of modern times, Aug. 17, 1812.

SMUGGLERS' Act passed, 1736; mitigated, 1781; new provisions, 1784; revision of, 1826.

SMYRNA nearly destroyed by an earthquake, April, 1730; and by a fire, June 20, 1742; had the plague 1743, 1752; the Armenian quarter burnt, May 14, 1753; had the plague, 1758, 1760; dreadful fires in, 1763 and 1772; and earthquakes and fire, in 1778; in March, 1796, which destroyed 4000 shops, 2 large mosques, 2 public baths, and all the magazines and provisions, to the value of 10,000,000 crowns; a riot there by the Slavonians, occasioned the janissaries to destroy the theatre and property of the Christians, to the amount of £100,000, when between 12 and 1300 persons lost their lives, May, 1797; dreadful fire in, June 10, 1811.

Snow for eleven days, 1762; remarkably deep in 1731 and 1736; 7000 Swedes perished in a storm of snow upon the mountains of Rudel and Tydel, in their march to attack Drontheim, in 1719; great fall of

snow in every part of England, in Jan., 1814; considerable fall of snow in the counties of Cambridge and Huntingdon, by which much damage was done to the gardens, Sept. 2, 1816.

Snow Hill, act of parliament passed for the improvement of, June 26, 1795.

SNUFF-TAKING originated with Catherine de Medicis—it was called *Herbe à la Reine*, 1560; large quantities taken at Vigo by Sir George Rooke, 1702, which introduced it into England; 196,305 lbs. of snuff were entered for home consumption in 1840.

SOAP first manufactured at London and Bristol, 1524; soap-boilers incorporated, 1632.

SOAP, Consumption of, and duty in the following years; repealed 1853:—

1801	52,947,037 lbs.

SOCIETY for the suppression of begging, instituted at Edinburgh, 1813.

SOCIETY of the houseless in London, founded Jan. 14, 1820.

SOCIETY Islands, in the Pacific Ocean, 1765.

SOCINUS, the founder of the Socinians, who taught that Christ was a man who had no existence as such before he was conceived of the

Virgin; that the Holy Ghost was not a distinct person, and that the Father was only and truly God; that Christ died to give mankind an exalted example of virtue, and to seal his doctrines with his death; original sin and the atonement they did not admit, 1556; Socinus died 1562.

SOCRATES put to death 396 B.C., aged 70.

SODOR and Man; the former of these words has exercised the skill of the antiquary, but it is said to be derived from the isle on which the cathedral is situated—*Sodor holme* or *peel*; bishopric of, founded 447.

SOIL, increase of income from, between 1820 and 1830, shown by the increase of luxuries and sources of amusement, and by the articles of supply. Gamekeepers increased from 3445 to 3920: under-gamekeepers, from 345 to 594; sporting dogs, from 126,446 to 131,499; race-horses, from 674 to 929; farming-bailiffs, from 858 to 1518; and gentlemen keeping for their own use twenty horses and upwards, from 1124 to 1214; and those having eleven men-servants and upwards, from 4202 to 4285. All these, save the latter two, appertain strictly to the soil, seeing that there are perhaps not half a dozen gentlemen throughout the whole kingdom who keep, for their own use, so many horses and men-servants, without being landed proprietors.

SOISSONS, one-third of the town of, destroyed, and many lives lost, by an explosion of gunpowder, Oct. 13, 1815.

SOLAR System discovered by Pythagoras, A.C. 500, the sun being in the centre, and the planets moving round it; Copernicus revived that system, and Newton confirmed it, 1695.

SOLAR Year found to consist of 365 days, 5 hours, and 40 minutes, by Dionysius of Alexandria, 285; introduced into use by Julius Cæsar, 45 years before Christ.

SOLDIERS forbidden by act of par-

liament to be quartered in private houses, Sept. 16, 1679.

SOLOMON Islands discovered by Alvarez de Mendoza, 1527; sought for in vain by Captain Cook.

SOLEBAY, Battle of, between the English and the Dutch, the former under the Duke of York (James II.); the Dutch were pursued to their own coasts, and a number of ships and several thousand men destroyed, May 20, 1672.

SOLWAY Moss, on the Scottish border, ten miles from Carlisle, began to swell owing to heavy rains, and upwards of 400 acres of it rose to such a height above the level of the ground, that at last it rolled forward like a torrent, and continued its course above a mile, sweeping along with it houses, trees, and every thing in its way; it then divided into islands of different extent, from one to ten feet deep. It covered near 600 acres at Netherby, to which it removed, and destroyed about thirty small villages. It continued in motion from Saturday the 4th, to Dec. 31, 1771.

SOMBRERO Island, uninhabited; upon that desert rock Robert Jeffrey, a sailor on board a man-of-war, was landed by the Hon. Captain M. Lake, for the offence of having tapped a barrel of beer when the ship was on short allowance; the poor fellow supported himself for eight days upon limpets and water, when an American vessel, accidentally touching at the rock, saved him from perishing; the man returned to England, and the case was brought before parliament; the man had received a compensation of £600 from Captain Lake; but that officer was tried by a court-martial, and discharged the service, Feb. 10, 1810.

SOMERSET the Black, a slave who had been brought to England, and, being in a bad state of health, was turned adrift by his master to starve; he was found by Granville Sharpe, who succoured him, and got him restored to health, on which his

master claimed him again; Mr. Sharpe resisted, and the law courts decided there could be no slave in England, June 22, 1772.

SOMERSET House, Strand, London, built 1549; pulled down 1776, and began to be rebuilt in its present state; the navy-office, pipe-office, victualling-office, and other public offices, removed into it in 1788; terrace fell down, Dec. 27, 1788; had £306,134:0:9½ granted by parliament to defray the expense of its erection to the year 1789, and £1500 additional in 1798, and £2550 in 1801; the east wing, called King's College, was erected in 1833.

SOMERS' Island first named and settled, 1609.

SOMERS, Lord, impeached, May 13, 1701.

SOMERSET, the Duke of, beheaded 1531.

SOPHIA, Mosque of, once a Christian church, and still the oldest applied to the purpose existing, built 566.

SOPHIA Dorothy, heiress of the house of Luneburgh and Zell, queen of George I. in England, died Nov. 2, 1726; separated in consequence of his unfounded jealousy of her.

SORBONNE, Robert de, founder of the college, 1253; he died 1274.

SORCERERS and Magicians, a law enacted against them, 28 Henry VIII., 1541; again, with more severity, by Elizabeth, 1563; the offence of pretending to sorcery and witchcraft, or conversing with or feeding devils or evil spirits, made capital by king James I. This miserable monarch, the persecutor of Raleigh, the greatest drunkard of

his court, and one of the most despicable in his habits, wrote "Dialogues of Demonologie;" a degraded parliament, to flatter him, passed such an absurd and cruel law, 1603; the clergy in consequence became witchfinders, officers called witchfinders made themselves every where busy, even the populace united the ignorance of the court to its own, and sacrificed its victims without form of law; yet had Bacon and Raleigh, and names that will ever shine in English history, long before taught better things. The victims on these absurd charges in 200 years, were estimated at 30,000.

SOUDAN or Sultan of Egypt, the title first taken by the celebrated Saladin, 1165.

SOUND flies at the rate of 1107 feet in a second, by experiments with cannon at Paris, 1738; the fire of the British cannon on the landing of the army in Egypt, was heard 130 miles at sea.

SOUNDINGS at Sea; 900 miles west of St. Helena, the depth was found to be 5000 fathoms; 300 miles in another direction from the Cape, 2266 fathoms found bottom with a weight of 450 lbs. in 1840; another sounding in the South Atlantic gave eight miles; and a second in a part of the sea supposed "out of soundings," in other words, having a depth of 400 or 500, was found to have only from 70 to 80 fathoms, and the ship came to an anchor over the spot, to the wonder of passing vessels, 1850.

SOUND, the passage between Sweden and Denmark, so called from Elsinour to the other shore; Denmark has exacted a toll from all vessels passing into the Baltic since 1348, a usage which it is singular is still submitted to; in the following years, the vessels thus enumerated passed from the high seas into the Baltic:—

 Tagus, May 29, 1588; again, June

12; totally defeated with immense
 loss, July, August, and September,
 1588.

SPANISH Netherlands, reduced by
 the allies under the Duke of Marl-
 borough, 1706.

SPEAKER of the House of Com-
 mons, the first is said to have been
 Simon de Montfort, who was killed
 at the battle of Evesham, 1260;
 the first chosen by the House, 1340;
 others suppose Sir Peter de la Mare
 was the first, 1376; the king refused
 his assent to Sir Edward Seymour
 as speaker, March 6, 1678; Sir J.
 Trevor expelled the chair as speaker,
 for taking a gratuity after the act
 for the benefit of orphans had
 passed, March 20, 1694.

SPEAKING Trumpet, one con-
 structed from Kircher's description
 by Saland, 1652; brought to notice
 by Moreland, 1671.

SPECTACLES, supposed to have
 been invented by Spina, a monk of
 Pisa, 1299, but this seems uncertain;
 others ascribe the invention to
 Roger Bacon.

SPENCE, one of the mistaken but
 well-meaning persons who imagine
 it possible to sweep away the diver-
 sity of human conditions—he had
 some followers, denominated Spen-
 ceans, 1809.

SPENCERS, father, son, and grand-
 son; the father hanged at Bristol,
 aged 90, Oct. 1327; the son hanged
 at Hereford, Nov. 24, in the same
 year; the grandson beheaded at
 Bristol, 1400.

SPINNING Jenny, invention of, the
 cause of England's prosperity; Har-
 greaves' invented, 1767; Arkwright's
 improvements, patent for, 1769,
 worked by horses; in 1771, worked
 his machinery by water, at Crom-
 ford; made the invention of
 Crompton be first used, 1779; this
 invention and that of the steam-
 engine alone saved England from
 ruin during the wasteful war of
 Pitt, begun to replace the Bourbons
 on the throne of France.

SPIRITS and Spirituous Liquors,
 taxed as strong water and aqua vite,

1660, one penny per gallon; every gallon of spirits made of wine or cider imported, 2d. Every gallon of strong water imported from beyond sea, 4d.; in 1660, additional duty, varying from time to time: consumption increased in 1736, the gin act passed to restrain spirit drinking, May 5. In 1738, no less than 12,000 persons convicted under the gin act within two years, 5000 paid a penalty of 500*l.*, and 3000 paid 10*l.* each, to prevent going to jail—these harsh proceedings failed: the spirituous liquors made for consumption in England, with 6,000,000 of population, were in

1723	10,500,000	gallons
1734	13,500,000	"
1740	15,250,000	"
1742	19,000,000	"

In 1742, there were 3½ gallons drunk per head in England; in that year 20,000 houses sold gin in London alone; in 1842, with treble the population in England and Wales, only 9,102,472 gallons of home-made spirits were consumed: consumption for the united kingdom in 1842—18,841,890 gallons; 1849—23,010,808, with a tripled population: a minute return for 1844, gave the quantity of spirits produced from grain in England (for home consumption) in 1844, as 8,234,440 imperial gallons, against 7,724,051 gallons in 1843, the annual produce of the duties being about 3,225,155*l.*, or 3,025,253*l.* In 1780, the number of imperial gallons consumed in England amounted to 2,291,940, paying a duty of 498,913*l.* The quantity of grain spirits produced in Scotland at present amounts to 5,922,948 gallons, from which a duty of 1,085,873*l.* accrues annually. In 1780, the consumption of Scotch grain spirits was 194,242 gallons, and the revenue arising therefrom only 33,882*l.* In Ireland, the quantity of grain spirits annually consumed at present amounts to about 6,451,137 gallons, and the annual produce of the duties, in British

currency, to 860,151*l.* The rates of duty appear to be—in England, 7*s.* 10*d.*; in Scotland, 3*s.* 8*d.*; and in Ireland, 2*s.* 8*d.* per imperial gallon. Further accounts are appended, showing the periods when distillation from corn was prohibited in England (from 1796 to 1814), the quantities of sugar used in distilleries, and the annual produce of the duties. The quantity of proof spirits distilled during the year 1844, amounted—in England, to 5,433,843 gallons, paying a duty of 3,225,155*l.*; and in Scotland, 8,321,306 gallons, paying a duty of 1,085,873*l.* These spirits were distilled from malt, and a mixture of malt with unmalted grain. The quantity of proof spirits imported into England from Scotland amounted to 1,950,758 gallons, paying a duty of 763,905*l.*; and the quantities imported into Ireland from Scotland, to 568,555 gallons, paying a duty of 75,822*l.* The duty was paid partly on removal from bond, and partly after the arrival at the place of destination. The number of gallons distilled in Ireland amounted to 6,878,243, paying a duty of 860,151*l.*, so that the grand total quantity of proof spirit distilled in the whole of the united kingdom during the year 1844, amounted to 20,633,392 imperial gallons, and the total amount of duty paid thereon, to 5,171,181*l.*

SPIRITS, Foreign; the total quantity of foreign brandy retained for home consumption in Great Britain amounted, in 1844, to 1,007,527 gallons, against 1,023,219 in the year 1843; and the whole quantity of Geneva, or foreign gin, to 13,119 gallons, against 12,448 gallons in 1843, imperial measure. In 1841, the consumption of brandy was only 494,716 gallons, since which period it gradually rose to 1,000,000 gallons per annum. On the other hand, the consumption of foreign gin fell off; there were 141,302 gallons retained for home consumption in 1814, at present the consump-

tion is only about 1-12th of that quantity. The amount of duty received in 1844 was—on brandy, 1,150,067*l.*; and on geneva, 14,980*l.* This revenue decreased, probably owing to the greater demand for home manufactured spirits, and to the exertions of the total abstinence fanatics. In 1814, the revenue arising from brandy was 575,152*l.*, and that on gin, 168,560*l.* The rates of duty on foreign brandy and geneva were, in 1844, 1*l.* 2*s.* 10*d.* per imperial gallon, as during the time of the long war they were only gradually raised from 7*s.* per gallon upwards. In 1789, the duty on brandy was only 6*s.* a gallon. For Ireland, an annual stock of 15,547 gallons of brandy, and 1,744 gallons of geneva, was required, the rates of duty being the same, 1*l.* 2*s.* 10*d.* In March, 1844, the duty reduced to 15*s.* per gallon, in place of 1*l.* 2*s.* 10*d.*; the consumption increased by this reduction from 1,172,365*l.* in 1847, to 1,659,659*l.*, or from 1,566,038 gallons imperial to 2,214,275, in 1849; and to 2,930,967 gallons in 1851, of which 1,859,273 were for home consumption.

1849...	6,973,333...	"

There was a diminution of population between 1841 and 1851 of above 1,000,000. In a comparison with

Scotland, the moderation of the Irish and English is remarkable :—

	Gallons.	Population.
1838.....	6,259,711...	2,543,961
1840.....	6,180,138...	"
1842.....	5,595,186...	2,620,610
1846.....	6,975,091...	"
1849.....	6,935,003...	"

England consumed of home-made spirits the gallon 0.51 per head, while Scotland consumed 2.38, and Ireland 0.90. Foreign spirits consumed in England, 1841, were 0.71 per head; Scotland, 0.15; and Ireland, 0.002 per head: of colonial spirit or rum, England, 0.14, Scotland, 0.02, and Ireland 0.0015 of a gallon per head, 1841. The total consumption of the united kingdom for 1841, was :—

Spirits	0.77 gal. per head
Rum.....	0.09 "
For spirits	0.044 "

SPIRES, the seat of the imperial chamber until 1689; the city burned by the French, and rebuilt after the peace of Ryswick, 1637; diet held there by Charles V., to condemn the reformation, 1529.

SPIITALFIELDS' Weavers reduced to great distress from want of employment, 1816; the sum of £5000 per week scarcely adequate to the distress experienced there in 1829.

SPITZBERGEN discovered in 1533 by Sir Hugh Willoughby, who supposed it to be a part of Greenland; afterwards visited by Barentz and Cornelius, who called it Spitzbergen.

SPONSORS first appointed to infants at christenings, 140; according to some authorities, half a century later.

SPOONER: a Mr. Spooner of Tamworth, in Warwickshire, died in 1775 at the age of 57; he weighed 40 stone 9*lbs.*, and measured 4 feet 3 inches across the shoulders.

SPORTS allowed on Sundays, after divine service; a declaration to that effect, constituting the first book of sports, published by James I., May 24, 1618; a second book of sports was published by Charles I.,

Oct. 18, 1633; they gave rise to numerous controversies.

SPOTS on the Sun, generally termed "maculae;" one observed three times the earth's diameter upon the sun's centre, April 21, 1766.

SPRING, one suddenly burst forth in the vicinity of Como in Italy, and caused the fall of two houses and a forge that were situated near it, 1806.

SPURS came into use, 1400.

SPURS, Battle of the, between Henry VIII. of England and the emperor Maximilian on one side, and the French on the other, they having entered into an alliance against France, 1513; the emperor received an allowance of a hundred ducats per day from the king of England, so that Austrian or German mercenaries in the service of England, are of a more ancient date than the reign of George III. and his subsidies; the Duke de Longueville, who commanded the French, was beaten at Guinegate, where, making more use of their spurs than their swords, they obtained for it the name of the "battle of the spurs."

St. Agatha, Monastery of, founded near Richmond, Yorkshire, 1151.

St. Andrew, a post-revolution Scotch bishopric, having ceased soon after the revolution of 1688; the year of its primary establishment is uncertain.

St. Andrew's Festival, instituted 359.

St. Asaph, Bishopric of, founded 560; the archdeaconry erected 1127; the deanery, before 1239; the sees of St. Asaph and Bangor were to have been united on the next vacancy of either, on the creation of the see of Manchester, by an order in council of Oct., 1838; the order was annulled, 1846; the sees to remain separate.

St. David, Bishopric of, founded 519; once the metropolitan see of Wales.

St. David's Day, the festival of

the Welsh, in honour of St. David their patron, 519, who removed the bishop's well from Carleon to Neneu, it being previously too near the Saxons; in a battle with these Saxon invaders, the Welsh wore a leek in their caps, which they recall by placing one in their hats in the present day.

St. Dizier, Battle of, in France, between Napoleon and the invading armies of the allies; the latter claimed the victory, Jan. 27, 1814.

St. George, Man-of-war, a 98, with the Hero and Defence, 74, lost on the coast of Jutland with nearly all their crews, Dec. 24, 1811; Admiral Carthew Reynolds perished in the St. George.

St. Ives, Cornwall, incorporated 1641.

St. James, Festival of, instituted 1089.

St. John's Gate, London, the entrance to the ancient monastery of the knights of St. John of Jerusalem, and the only remnant of that establishment, suppressed 1540.

St. Jude, Festival of, instituted 1090.

St. Luke, Feast of, instituted 1130.

St. Maloes, France, bombarded by the English, 1693; attacked again by the English in 1758, when they burned or destroyed above 100 vessels in the port, since strongly fortified.

St. Mark, Festival of, instituted 1090.

St. Martin's Feast, instituted 812.

St. Martin's Church, Canterbury, built 182.

St. Mary's Abbey, York, built 1088.

St. Mary's Priory, Thetford, built 1104.

St. Michael's or Vale Castle, Guernsey, built 1100, the church 1117.

St. Michael's Mount Monastery, Cornwall, built 1030.

St. Osyth's Priory, Essex, founded 1120.

St. Paul's Cross, London, which once stood before the cathedral; here was a pulpit, with steps up to it, in which the city divines preached every Sunday forenoon, and they were attended by the corporation, 1259; it was devoted not only to polemical but political purposes; Jane Shore, the favourite of Edward IV., was dragged before it by her priestly persecutors, 1483, with every mark of degradation they could heap upon her; it was not the worst act of the parliament that commanded its demolition in 1643.

St. Peter ad Vincula, Festival of, instituted 317.

St. Peter's Church at Rome, the noblest in the world, erected on the spot where the emperor Constantine erected a church; it was begun under Pope Nicholas V. by Rosellini, in 1450, who cleared the ground, and demolished a temple of Probus there; the first stone was laid in 1506 by pope Julius II., and under the architect Bramante, and after him of the sublime Michael Angelo, who amended the original plan, and erected the dome: when he died, 1564, then Vignola succeeded him as architect, and then Della Porta; 600 workmen were employed upon it, and the last stone was laid, 1590; the façade and lateral parts of the portico were not completed until 1621; the front has a width of 400 feet, and is 180 in height; the dome rises to 324 feet; the height externally is 432, the length 669, and the breadth within, 442.

The inventory duty is paid in the first place on the whole succession, without deduction of debts; but Act 55 Geo. III. cap. 184, sec. 51, provides for a return being given on proof of the debts being paid, so as to confine the duty to the net balance. This repayment must be claimed within three years; but the time will be prolonged on cause shown. If there be any omission in the inventory, an additional one must be lodged.

Legacies, Annuities, Residues to children or their descendants, or lineal ancestors of the deceased, £1; brother or sister, or their descendants, £3; uncle or aunt, or their descendants, £5; grand-uncle or aunt, or their descendants, £6; all other relations or strangers, £10.

The husband or wife of the de-

ceased is not chargeable with duty. Where the testator, testatrix, or intestate, shall have died after the 5th day of April, 1805: for every legacy, specific or pecuniary, or of any other description of the value of £20 or upwards, given by any will or testament of any person who shall have died after the 5th day of April, 1805, either out of his personal or movable estate, or charged upon his heritable estate, or out of any moneys to arise by the sale, mortgage, or other disposition of his real or heritable estate, or any part, and which shall be satisfied or discharged after the 31st day of August, 1815, in Great Britain, or after the 9th day of October, 1842, in Ireland; also for the clear residue when devolving to one person, and for every share of the clear residue when devolving to two or more persons, of the personal or movable estate of any person who shall have died after the 5th day of April, 1805, after deducting charges first payable, whether the title to such residue, or any share thereof, shall accrue by virtue of any testamentary disposition or upon a partial or total intestacy; where such residue shall be of the value of £20 or upwards, and where the same shall be paid, delivered, retained, satisfied, or discharged after the 31st day of August, 1815, in Great Britain, or after the 9th day of October, 1842, in Ireland; also for the clear residue when given to one person, and for every share of the clear residue when given to two or more, of the moneys to arise from the disposition of any real or heritable estate, directed to be sold, mortgaged, or otherwise disposed of by any testamentary instrument, of any person who shall have died after the 5th day of April, 1805, after deducting charges first made payable thereout, if any, where such residue shall amount to £20 or upwards, and where the same shall be paid, retained, or discharged, after the 31st

day of August, 1815, in Great Britain, or after the 9th day of October, 1842, in Ireland.

Each grant of the dignity of a duke, £200; marquis, £200; earl, £200; viscount, £150; baron, £100; and baronet, £50. Of a congé d'elire, £20. Of the royal assent to the election of archbishop or bishop, £20.

STANDARD, the Metallic, of the united kingdom, first fixed by law, 1300; that for gold being 22 out of 24 parts pure, and the other 2 of silver or copper; the standard of silver is 11 oz. 2 dwts. of pure metal, with 18 dwts. of copper, or 40 parts silver, and 3 parts copper; in 1300, such 12 oz. troy were coined into 20*s.*; in 1412, into 30*s.*; in 1527, into 45*s.*; in 1545, 6 oz. of silver and 6 of alloy were coined into 48*s.*; and in the following year the reigning king coined 4 oz. of silver and 8 oz. of alloy into 48*s.*; Elizabeth in 1560 restored the old standard at 60*s.*, and

in 1601 into 62*s.*, now 66*s.*; the common proportions of silver to gold in the mint are as 15½ to 1.

STANDARD, or Ensign, borne by military bodies, but in the singular understood as the flag of the chief; in early ages the cross was used as the standard of the Christian armies, as Constantine warily bore it to attach the Christians to him, 312. Mahomet's standard was green, and preserved by the Porte with great care, carried in a procession in 1768: the Turks butchered all the infidels who dared to look at it. The imperial standard of England, after the

union with Ireland, was first hoisted on the Tower in London and Castle in Dublin, Jan. 1, 1801.

STANDING while the Gospel is read, ordained 406.

STANISLAUS, the abdicated king of Poland, burned by accident, Feb. 6, 1768, aged 89.

STANISLAUS Poniatowski, the de-throned king of Poland, 1795, died April 11, 1798.

STAPLEDON, Bishop of Exeter, murdered in a London insurrection, 1326.

STAPLES Inn, London, built 1415.

STAR Chamber, Court of the, named from the ceiling being ornamented with stars. This court was instituted by Henry VII., 1487, as a place to try causes before the privy council; Charles I., and his tyrannical instrument Laud, archbishop of Canterbury, here as elsewhere set the laws of the realm at defiance; enormous fines, whippings of the most cruel character, slitting the noses, cutting off the ears of persons obnoxious to the court, and imprisonments of frightful duration, were everyday occurrences, increasing the merited dislike to Charles and his semi-papistical tools. After proving practically, but too long, that there was no law but the will of the king and his chief minion, this court was put down when it could no longer be maintained, in 16 Charles I., 1641, but too late to make it ever be forgotten that the king was a great supporter of this disgraceful tribunal.

STAR Castle, Scilly Islands, built 1593.

STAR, order of knighthood in France, disused 1465.

STARS; the heavens were very early observed in the East; it is said 1500 years before Christ there were many of them named; there is a map of the stars extant in the king's library at Paris, which gives the stars 600 years before Christ, and contains 1460 stars correctly laid down.

STARCHING of Linen, first brought into England by Mrs. Dingham of Flanders, 1554; starch was heavily taxed by Pitt, but the act was subsequently repealed; the starch-makers were incorporated as a company, 1632.

STATES-General of France, an ancient assembly of that country, last convened before the revolution of 1789, in 1614; it consisted of three orders—the nobility, clergy, and commons; they last met May 5, 1789, when they differed about meeting in three bodies or collectively; they finally met in one hall, and thence the national assembly of that eventful era.

STATIONERS' Company had their first charter, 1556; second, 1558; again, 1667 and 1684, their first charter confirmed, 1689; they had a patent for the sole printing of almanacs, 1615, in aid of their poor members.

STATUES; the moderns have never been able to compete with the ancients in statuary; Italy has produced the best since the decline of the empire; Michael Angelo is at the head of modern sculpture. The first and best public statue in London, is that of Charles I. in Charing Cross, the horse is particularly fine; it was made in 1633, by Le Sueur, a French sculptor of merit; it was buried during the commonwealth by a brazier who purchased it, and re-erected it in 1678; as works of art, there is yet wanting one in this department of the fine arts to which England may point as worthy of the admiration of foreigners; there is, or was, a statue of George I. in Leicester Square; that in Soho Square, though placed there according to some authorities in 1679, passes both for Charles II. and for the duke of Monmouth; George I. has disappeared for more than a century from Grosvenor Square:—

STATUTES, the first printed in England in English, 1483; prefixed titles to them, 1487; the more celebrated were those of Clarendon to restrain the clergy, written in French, 1267; Marlborough, 1269; Gloucester, the earliest of which any record exists, 1277; of Mortmain, 1279; *Quo warranto*, Oct., 1280; of Winchester, Oct. 1284; forbidding the levy of taxes without consent of parliament, 1297; of Premunire, 1306; the first printed bearing date 1483, are in English; the statutes compiled from the original MSS. and records, by commissioners appointed 1801; the first volume appeared 1811; the second, 1816.

STEAM-Engine, several hints, and

machines more elegant than useful, were promulgated and shown prior to that of Branca, who resided at Rome in the beginning of the 17th century, 1628, 1629; the marquis of Worcester's obscure hints in his "Century of Inventions," 1663; Sir Samuel Moreland's project, 1682; Papin's digester, invented 1681, being his first project; his idea of a steam-engine promulgated 1685; Savary, the first who raised water by fire, 1698; Papin's engine shown to the Royal Society, according to report, 1699; Savary published an account of his engine, 1696, and his answer to objections in his "Miner's Friend," 1702; exhibited his mode to William III., 1699; Amonton's fire-wheel, invented 1699; Papin's new engine, 1707; Cawley and Newcomen's engine, in conjunction with Savary, 1705; Newcomen's engine erected at Wolverhampton, 1712; Beighton's engine, 1718; Savary raised the ballast from rivers by steam, 1718; Leupold's engine, the first high pressure, 1720; Hull's patent for moving ships by steam, 1736; Blakey's engine, 1756; Fitzgerald's attempted improvements, 1578; the atmospheric engine, introduced into the United States of America between 1750 and 1760; Watt's invention of condensing in a separate vessel, 1765; his first patent, 1769; his patent renewed, 1775; engine to give a rotatory motion, 1778; Smeaton's portable atmospheric engine, 1765; Watt's expansion engine, 1778; double-acting engines proposed by Dr. Falek, on Newcomen's principles, 1779; Watt's double engine, and his first patent for it, granted 1781; the marquess Jouffroy constructed an engine on the Saône, 1781; Hornblower's engine, 1782; Cook's rotatory engine, 1787; W. Symington made a passage on the Forth and Clyde canal, 1789; first steam-engine erected in Dublin by Henry Jackson, 1791; Sadler's rotatory engine, 1791; Cartwright's engine,

1797; Hornblower's rotative engine, 1798; Nancarrow's engine, 1799; Trevethick's high pressure engine, 1802; Trevethick and Vivian, 1804; Hornblower's steam-wheel, 1805; Woolfe, London, double cylinder, 1805; Miller, London, 1805; Maudsley, 1807, portable engine; Mead, Hull, steam-wheel, 1808; Noble, new steam-engine, 1809; Clegg, steam-wheel, 1809; James, steam-boat, 1811; Fox and Dean, 1812; Noble's improved engine, 1814; Dodd, carriages, and Stephenson, carriages, 1814; Trevethick, rotative engine, 1815; Oldham, steam-boats, 1817; Congreve, steam-wheel, 1818; Rider, rotatory engine, 1820; Perkins, 1822; Stephenson, 1822, 1823, &c., &c.; locomotive steam carriages on railway at Liverpool, Oct. 1829.

STEAM-Engines in Birmingham, in 1780 to 1815, only 42; in 1839, 240.

STEAM-Engine burst at Providence mill, in Shipney, near Bradford, Yorkshire, by which five young persons were killed, Feb. 4, 1811. The valves of the boiler of one in the extensive sugar-baking warehouse of Mr. Cronstadt of Wellstreet, Wellclose-square, burst, which destroyed the manufactory, and buried upwards of 20 persons in the ruins, Nov. 15, 1815.

STEAMBOAT Accidents, British steamers, during twenty years of the infancy of the navigation :—

1817, there were 14 steam vessels running; one took fire and was burnt; the boilers of another exploded; nine persons perished in this year.

1818, 19 steamers; no accident.

1819, 24 steamers; no accident.

1820, 34 steamers; one burnt; nobody suffered.

1821, 59 steamers; no accident.

1822, 85 steamers; no accident.

1823, 101 steamers; no accident.

1824, 116 steamers: the boilers of two exploded; three deaths.

1825, 153 steamers; one wrecked;

two, the Comet and the Ayr, came in collision, and 62 persons lost their lives: the boilers of another exploded.

1826, 230 steamers; one burnt; explosion on another; six sufferers this year.

1827, 255 steamers; one wrecked; explosion on another; two lives lost.

1828, 274 steamers; two wrecked; one burnt; explosion on two; one life lost.

1829, 289 steamers; three wrecked; explosion on one; six lives lost.

1830, 298 steamers; three wrecked; explosion on one. The Forly totally lost, but the number of persons on board not precisely known. The other accidents did not occasion a death.

1831, 324 steamers; two wrecked; two collisions; one burnt; 119 persons perished on the *Rothsary Castle*, near Beaumaris.

1832, 352 steamers; no accident.

1833, 387 steamers; 6 wrecked; 1 burnt, and 73 deaths, without including the *Erin*, which was lost, with all on board.

1834, 430 steamers; 2 wrecked; 1 burnt, and one explosion. The *Superb* lost, with all on board, in the North Sea; number of sufferers unknown. The other casualties caused no loss of life.

1835, 503 steamers; 3 wrecked; 2 came into collision; 1 explosion of boilers; 13 lives lost.

1836, 561 steamers; 2 wrecked; 4 collisions; 2 burnt; 1 explosion; no life lost.

1837, 707 steamers; 2 wrecked; 4 ran against each other; 3 took fire and burnt; 1 explosion; total victims, 29.

1838, 766 steamers; 5 wrecked; 2 collisions; 6 explosions; 132 lives lost.

The total number of lives lost, 456, not including the *Erin*, *Forly*, and *Superb*, estimated at 120 more. Notwithstanding twenty years' experience, the year 1838 was the most disastrous. The *Killarney*, Nor-

thern Jack, and Forfarshire were lost.

STEAM-Engines' Materials, cost of, the following is given as the com-

parative prices in England and France, of the materials employed in the construction of marine steam-engines of 450 horse power, in 1851 :

STEAMBOATS, above 1,057,000 passengers to Gravesend and elsewhere, passed Blackwall, in 1836, in these boats.

STEAM to India, the passage of the mails from Bombay to Suez, began 1834; the communication rendered more perfect, 1837; by Falmouth and Malta, the distance, 6,310 miles, was shortened, by passage overland to Marseilles, to 5,238 miles, the distance by the Cape being 10,580 miles; in 1841, mails were conveyed between Suez, Bombay, Ceylon, and Calcutta, and then to Hong Kong; the correspondence thus quickened, increased in the following ratio:—

From, 1834, 158,933; to, 105,739.
 " 1835, 167,341; " 106,779.

The largest European steam vessel belonged to Russia, 1848, being of 2049 tons, and 540 horse power—she possessed 65; Belgium had the next largest, of 1600 tons and 500 horse power—she possessed 3; Egypt had 8, the largest of 963 tons and 220 horse power; Turkey 14, the largest 814 tons and 300 horse power: all the other powers ranged from 842 tons downwards; France possessed 119, none above 600 tons; Sweden, 61, the largest 841 tons; the Danes, 15; Norway, 10; Holland, 38, the largest 707 tons; Spain, 13; Portugal, 10; Sardinia, 12; Austria, 16; Brazil, 30; the United States (sea going), 261.

STEEL, iron refined and hardened; improvements in the process, 1798; about 8500 tons exported annually; may be rendered 300 times more valuable than gold by manufacture, weight for weight: thus, six steel pendulum watch springs weigh 1 grain, and give the artist 7s. 6d. each, or £2. 5s.; a grain of gold is worth only 2d.

STEEL-Yard Company, a company of London merchants who had the steel-yard granted to them by Henry III., 1232; they were only exporters of English commodities.

STEEL-Yard, an ancient balance, said to have come down from the Romans, 315 A.C.; to the present day, the vulgar in some places call them Stilliers.

STEINBERG, a German, murdered

Ellen Lefevre and her four children at Pentonville, Sept. 8, 1834.

STENOGRAPHY or short-hand writing; the inventor is unknown; the oldest system extant was printed 1412; Bales, the penman, also published upon stenography, 1590; there are numerous modern systems, that of Gurney is the more general.

STEPHEN, St., order of knighthood of, began in Florence, 1561.

STREOMETER, an instrument to take the liquid contents of any vessel, invented 1350.

STEREOTYPE, the invention has been claimed by two Scotchmen named Ged and Tilloch, the one as suggesting, the other as carrying out the invention 40 years afterwards, in 1779; but the real inventor was F. A. Didot, the celebrated printer of Paris, 1779; it was early in use in Holland, but the English, in their usual dislike to all innovations, did not adopt it until 1809, when Wilson made use of it in London.

STEWs suppressed, until then licensed, 1546.

STIRRUPS first used in the sixth century.

STOCK, Night-scented.—A specimen of a very extraordinary flower is known in the north of England by the above name. It grows in the open air in Cornwall, and flowers in the summer time; but this stock is forced in the hothouse northwards. During the day this flower, which is small and delicate,

has no smell, but in the dusk of the evening, and during the night, it gives forth a strong and delicious perfume. It appears to be one of the most beautiful and extraordinary ornaments of the flower garden, 1835.

STOCKINGS, Silk, first worn by Henry II. of France, 1547. Howell says, that in 1560 Queen Elizabeth was presented with a pair of black knit silk stockings by her silk-woman, Mrs. Montague, and she never wore cloth ones any more. He adds that Henry VIII., that magnificent and unprincipled monarch, wore ordinarily cloth hose, except there came from Spain, by great chance, a pair of silk stockings; for Spain very early abounded with silk. His son, Edward VI., was presented with a pair of Spanish silk stockings by his merchant, Sir Thomas Gresham, and the present was then much taken notice of; consequently the invention of knit silk stockings came from Spain. Others relate that William Rider, a London apprentice, seeing at the house of an Italian merchant a pair of knit worsted stockings from Mantua, from thence made a pair like them, which he presented to the Earl of Pembroke, the first of the kind made in England, 1564; stocking-frame weaving was invented by the Rev. Mr. Lee, of Cambridge, 1587.

A violent storm desolated a great part of Denmark and Norway, 1194. Many lives were lost, and houses overthrown, and the corn in the fields destroyed, by hailstones as large as hens' eggs, 1205. One which threw down several churches, 1222. It thundered for 15 days together, with terrible tempests of thunder and rain, 1233. The chimney of the chamber where the queen of king Henry III. and her children lay was blown down, and their whole apartments at Windsor shaken; many oaks in the parks were rent asunder and torn up by the roots, accompanied by such thunder and lightning as had not been known in the memory of man,

1251. As king Edward I. and his queen were talking together in their bedchamber, a flash of lightning struck in at the window, passed by them, killed two of their servants who were waiting upon them, but did their majesties no hurt, 1285. When Edward III. was on his march, within two leagues of Chartres, there happened a storm of piercing wind that swelled to a tempest of rain, lightning, and hailstones, so prodigious as instantly to kill many of his horses and of his troops, 1339. When Richard II.'s first wife came from Bohemia, she had no sooner set foot on shore, but such a storm immediately arose as had not been seen for many years, when several ships were dashed to pieces in the harbour, and the ship in which the queen came over was shattered and broken; and which was the more observable, because his second wife brought a storm with her to the English coast, in which the king's baggage was lost, and many of the ships of his fleet cast away, 1380. In different parts of England many houses were thrown down, cattle destroyed, and trees rooted up, 1382. The leads of the Greyfriars' church, and the whole side of a street, called the Old Exchange, London, beaten down, Nov. 25, 1413. STUART, Captain, insane, tried for the murder of seven of his crew, under extraordinary circumstances, Aug. 11, 1828.

STUCCO-WORK, an invention of

the ancients, said to have been revived by d'Udine, 1550.

STYLE, alteration of the Julian calendar, formed at a General Council held at Nice in the year 325, appointed the introduction of one day in every four years, in consequence of the year consisting of nearly 365½ days, was found to be incorrect, inasmuch as the year being only 365 days 5 hours and 49 minutes in length, there arose a difference of 44 minutes in every four years, or about three days in 400 years. To obviate this difficulty, Pope Gregory XIII. held a consultation in 1582, and made an arrangement that every hundredth year should be accounted a common year, and not a leap year, unless its centesimal parts were divisible by four:—thus, that 1700, 1800, and 1900 should be common years, whilst 1600 and 2000 should be leap years. This Gregorian calendar was received in most parts of Europe, but was not introduced into England till the year 1751, when the great inconvenience arising to merchants and others corresponding with foreign nations, and the equinoxes happening at a different time from that set down in the calendar, occasioned an Act of Parliament to be passed in the 24th of Geo. II., c. 23, intituled, "an Act for regulating the commencement of the year, and for correcting the calendar now in use." It was hereby enacted, that the year 1752 and all succeeding years should begin on the 1st January preceding the 25th March, which had been the usual time of the year's commencement, and that eleven days should be omitted after Wednesday, the 2nd September, 1752, the next day being called Thursday, the 14th September, as the surplus of forty-four minutes in every four years had amounted to about eleven days since 325. Other corrections of the old style were at that time adopted in England.

SUBMARINE Electric Telegraph;

the connection of England and France, London and Paris, by means of the electric wire, was executed in 1850 and 1851, to the complete fulfilment of its object; the wire began to be laid down Aug. 28, 1850. The connecting wires were placed on the government pier in Dover harbour; and in the Goliath steamer were coiled about 30 miles in length of telegraphic wire, enclosed in a covering of gutta percha half an inch in diameter. The Goliath started from Dover, unrolling the telegraphic wire as it proceeded, and allowed it to drop to the bed of the sea. In the evening the steamer arrived on the French coast, and the wire was run up the cliff at Cape Grisnez to its terminal station, and messages were sent to and fro between England and the French coast. But the wire, in settling into its place in the sea-bottom, crossed a rocky ridge, which injured it, for it snapped in two, and thus the enterprise for the moment failed, but was speedily renewed and perfected, and continues to perform its rapid journeys ever since, bringing the two capitals in contact.

SUBSIDIES. See Loans. Under the lavish system of Pitt, in his ambition to be a distinguished war minister, England was fleeced by every miserable continental power; the aggregate of the sums given on all sorts of pretexts was, from 1793 to 1814, £46,289,459. All the sufferers among our allies partook of the taxes levied on laborious Englishmen; needy princes, expelled their own realms, kept their purses full at England's expense; even Louis XVIII., who had not money to return to France, in 1814, got from the government that in 1793 went to war to restore his dynasty £200,000, which he seems never to have been grateful enough to repay. In the above mode were expended,—1793, 833,273*l.*; 1794, 2,550,225*l.*; 1795, 5,724,961*l.*; 1796, 32,780*l.*;

1797, 1,684,586*l.*; 1798, 127,013*l.*; 1799, 849,812*l.*; 1800, 2,613,177*l.*; 1801, 690,114*l.*; 1802, 285,451*l.*; 1803, 212,275*l.*; 1804, 103,423*l.*; 1805, 35,341*l.*; 1806, 695,847*l.*; 1807, 859,082*l.*; 1808, 2,897,873*l.*; 1809, 2,579,039*l.*; 1810, 2,110,543*l.*; 1811, 2,367,413*l.*; 1812, 3,908,521*l.*; 1813, 6,786,022*l.*; 1814, 8,442,578*l.*; Total, 46,289,459*l.* Besides money, in one year alone, 1814, the sum of 1,582,045*l.* was supplied in arms and equipments. Subsidies in early times were given in merchandise: thus 30,000 sacks of wool were voted to Edward III., 1340, for his wars against France: they were raised upon the subjects of England as late as 1624 to 1639; in 1800, England in return for her subsidies got Austria to stipulate that neither should make peace with France without the consent of the other; but Marengo and Hohenlinden, 1800, showed the inutility of such treaties, and again, Austerlitz, in 1805; the posterity of England being burthened with the interest of the debts for all.

SUCCESSION Act, passed to exclude Catholics from the throne, 1689; the crown of England was settled upon the present royal family by the 13 William III., June 12, 1701, by which the crown, after the demise of William III. and queen Anne without issue, was limited to the princess of Hanover and her heirs, she being the grand-daughter of James I.

SUCCESSION, the War of the, remarkable for the brilliancy of the exploits of Marlborough, and its utter inutility to England, the question being as to who should succeed to the crown of Spain; England opposed France upon the question—Marlborough gained splendid victories—the allies fell off from each other, and after an ocean of bloodshed the French monarch gained his object in the peace of Utrecht, 1713.

SUNBURY, Archdeaconry of, founded 1127.

SUDBURY, Archbishop of Canterbury, beheaded by the rebels on Tower Hill, June 14, 1831.

SUDELY Castle, Gloucestershire, built 1442.

SUEVI, said to have been the inhabitants of Lusace in Upper Saxony, styling themselves Visigoths on settling in Spain, to distinguish themselves from the Ostrogoths, established in Italy 419.

SURREY, Archdeaconry of, erected before 1127.

SUFFOLK, the Earl of, lord treasurer, discarded and fined £30,000, for embezzlement, 1615.

SUFFOLK in Virginia, destroyed by the British forces, May 1779.

SUGAR, first mentioned by Paul Eginetta, a physician, 625; originally from China and the East; produced in Sicily, 1148; produced in Madeira, 1419; in the Canary islands, 1503; attempted to be cultivated in Italy and not succeeding, 1659; carried to the West Indies by the Portuguese and Spaniards, 1510; cultivated at Barbadoes, 1641; sugar refining first discovered by a Venetian, 1503; practised first in England, 1659; was first taxed in England, 1685; imported into England, in 1780, above 1,936,440 hundred weight, for which duty to the amount of £1,180,814:12:6 was levied; in 1801, the quantity of sugar cleared in England for home consumption was, 3,341,496 cwt.; 1811, 3,938,367 cwt.; in 1821, 3,128,026 cwt.; the duty in 1801 was 20s.; in 1811, 27s.; 1821, 27s.; the population in 1801, 10,942,646; in 1821, 14,391,631; thus showing an over-taxed article. In Ireland for home consumption, 1800, 298,069 cwt., the average of 3 years; in 1810, Jan. 5, average of 3 years, 420,093; 1821, 380,608 cwt.,—duty 17s. 6d., 27s., population, 1800, 5,395,456; 1810, population, 5,950,917; in 1821, 6,801,827, showing an over-taxed article; in 1831, the duty was reduced to 24s.; in 1830, the quantity retained for home consumption

was 4,147,350 cwt., or 19-94, per head, the price being, duty included, 49s. 0½d. per head; in 1849, the consumption was 24-12 per head, the quantity consumed being 5,982,593 cwt.; the differential duty on sugar to be abolished prospectively, July 5, 1854.

SUGAR first taxed by name, 1 James II., 1685.

SUICIDES; the propensity to fly from the evils of existence is not confined to real sufferings from that cause; there are as many from imaginary as from real evil—from prospective as from present; of 163 suicides, and 63 female, in ten years previous to 1821, in Westminster, it appears that in England the month of July, and not that of November, returns the larger number; the months of June and July have been observed to be most productive of suicide on the continent; in 1836, sixty voluntary deaths took place at Rouen during the months of June and July, the air being at that time remarkably humid and warm; and in July and August of the same year, more than three hundred suicides were committed at Copenhagen, the constitution of the atmosphere presenting the same phenomena as it did at Rouen:—

In Paris, after the examination of 9000 cases of suicide, between 1793 and 1830, it has been observed so repeatedly as to be asserted for fact, 1.—that philosophical or premeditated suicide takes place during the night, and a little before daybreak; 2.—that accidental or unpremeditated suicide takes place during the day, because it is then that the occasional causes arise, as quarrels, bad news, losses at play, intemperance, &c.; at every age man seems to choose particular modes of suicide,—in youth he has recourse to hanging, which he abandons for fire-arms; in proportion as his vigour declines, he returns to his first mode—it is most commonly by hanging that the old man puts an end to his existence; these considerations are curious with respect to medical jurisprudence. The following table shows the mode of suicide the most common at different ages in France:—

Age.	Pistol.	Hanging.

The other modes of death are not given, as not so much to the purpose; in England, of the suicides out of pure ennui, life-weariness, remarkable examples were—that of Lord Clive, in Nov., 1775; General Pichegru, April 7, 1804; Miss Champante, Aug. 15, 1804; Sellis, the valet of the Duke of Cumberland, May 31, 1810; Williams, the murderer of the Marr family, Dec. 15, 1811; Lord Franch, Dec. 9, 1814; Marshal Berthier, June 1, 1815; Samuel Whitbread, Esq., Sept. 6, 1815; Sir Samuel Romilly, Nov. 2, 1818; Sir Richard Croft, Nov. 6, 1818; Christophe, king of Hayti, Oct. 8, 1820; Ad-

miral Sir George Campbell, Jan. 23, 1821; Marquess of Londonderry, Aug. 12, 1822; Hon. Colonel Stanhope, Jan. 26, 1825; Mr. Montgomery, in Newgate, July 4, 1828; Miss Charlotte Both, Jan. 3, 1830; Lord Greaves, Feb. 7, 1830; Colonel Brereton, Jan. 13, 1832; Major Thompson, June 18, 1832; Mr. Simpson, the traveller, July 24, 1840; Lord James Beresford, April 27, 1841; General Sir Rufane Shaw Donkin, May 1, 1841; the Earl of Munster, March 20, 1842; Lord Congleton, June 8, 1842; Colonel Gurwood, Dec. 29, 1845; Rear-admiral Collard, March 18, 1846; Haydon, the eminent painter, June 22, 1846; Count Bresson, Nov. 2, 1847; Colonel King, in India, July 12, 1850; Walter Watts, lessee of the Olympic theatre, July 13, 1850; a Frenchman threw himself into the crater of Vesuvius, 1820; a woman threw herself from the monument, 1750; John Cradock, a baker, 1788; Lyon Levy, a merchant, 1810; a girl named Moyes, 1839; a boy called Hawes, 1839, and a girl called Cooper, aged 17, 1842; several have flung themselves under the wheels of railway carriages. In England, among the old usages to deter the vulgar from suicide, the body was buried in cross-roads, a stake being driven through it; a usage sufficiently barbarous.

SULTAN, a title of the head of an empire, the same as king or ruler in Christendom, first given in 1055 to the Turkish princes.

SUMPTUARY Law passed 1482, to restrain luxury in the reign of Edward III. and Henry VIII.; the futility of imposing such laws needs no comment.

SUMATRA and Malacca discovered by the Portuguese, 1518; visited by the Spaniards, 1521.

SUN, the centre of the system advanced by Copernicus, 1530; Galileo and Newton imagined the sun to be an igneous body, but the phenomena of electricity, and the galvanic and magnetic dis-

coveries were not known in their time; the maculae on its surface first noticed in 1611; Halley discovered the sun's motion on its own axis, 1676; his discovery of the sun's parallax, 1702; Herschel measured spots on the sun, which covered together 50,000 square miles.

SUNDAY, or the Lord's day, called Sunday because on that day adoration was paid to the sun by the northern Pagan nations; called the Lord's day on account of the appearance of Christ after the resurrection; it was established as an imitation of the Jewish sabbath, together with other church festivals, by Constantine the emperor, March 7, 321; labour in the country was not prohibited on that day until the council of Orleans, 338; it was thus an institution of the church, as Dr. Paley has remarked. The earlier Christians met in the morning of that day for prayer and singing hymns in commemoration of Christ's resurrection, and then went about their usual duties; the Jewish sabbath appears to have been set aside under the new dispensation, until made observable by the above ordinance; the book of Sunday sports, published 15 James I., 1618, was violently opposed; the Sunday act was passed, 1781.

SUNDAY Schools first established in England about 1782, by Robert Raikes, a printer of Gloucester.

SUNDIALS discovered in remote antiquity; first set up in churches, 613.

SURNAMES, Use of, introduced by the Romans, to distinguish families; first used among the nobility, 1200; many of the more common, as Jackson, Wilson, Thomson, were taken from the Flemings; some from agricultural pursuits, as Bellwether, Merewether; from trades, as Arrowsmith, Goldsmith, Painter, and the like, 1200.

SURNAMES first used in England, 1102, became common, 1199; under the Normans, Fitz was used by them

as a prefix for son, whence the French *filz*; the Irish used O, and the Scotch Mac: the Saxons added the word son as Will's-son, John's-son; some were borrowed from continental countries.

SURPLICES originally worn by Pagan priests, and adopted from them in churches, 316; generally ordered by pope Adrian, 786; prescribed also by 2 Edward VI., 1517; Elizabeth, 1558; and Charles II., 1662.

SURREY Canal Dock opened at Rotherhithe, 1807.

SURREY Institution commenced, 1808; dissolved, 1823.

SURVEY of England first made by Alfred, 900; by William the Conqueror, 1080; by Charles II., 1668.

SUSPENSION Bridges introduced into use in England early in the 19th century; the Menai and Hangerford the most important; one at Broughton, Lancashire, fell April 11, 1831.

SUSSEX, kingdom of, founded by Ella a Saxon, 419; ended, 754.

SUTLEY, India, Battle of the, with the Sikh army and the English, under Sir Harry Smith, called also the Battle of Allival; the English loss was severe, but the Sikhs were routed with the loss of 67 pieces of cannon, and 10,000 men.

SUTTERS, or the Hindoo burning of widows; these immolations to the manes of their departed husbands, were abolished by the government there, Dec. 7, 1829.

SUTTON, Thomas, founded the Charterhouse in London, 1600.

SUTTON-Coldfield, Warwickshire, chartered by Henry VIII. about 1538.

SUWARROW Islands discovered by Lieut. Lasuran, of the Russian ship Suwarrow, Sept. 27, 1814.

SWALE, six women and a man drowned in, by accident, near Feversham, June 23, 1816.

SWAN, order of knighthood in Cyprus, began 1405; in Sweden, 1528.

SWANSEA Castle, South Wales,

erected, 1113: the town of, made a borough, 1832.

SWAN River Settlement, projected 1828; a lieutenant-governor appointed, 1829; the same year, Perth, Freemantle, and Guildford, three towns, were founded; the *Freemantle Gazette* published March, 1831.

SWAINSHAW, Mrs., died in Rose-hill workhouse, Tower-hill, Dec. 6, 1711, aged 127.

SWEARING on the Gospels first introduced, 528; with judicial proceedings, 600; a fine for swearing introduced, 6 William III., 1695; a labourer or servant to pay 1s. per oath: others, 2s.; for a second offence, 4s.; and a third, 6s.

SWEATING-sickness, which some reported to be an English disease, appeared first, 1485; six aldermen of London died of it in a week, and many thousands of the inhabitants: in 1517, it destroyed one half of the inhabitants in many English towns: it appeared again in 1528, 1529, and 1551; in Oxford, 501 men, and no women, died of it in July, 1575; those attacked were carried off in from three to six hours.

SWEDEN, Suithcad, and more recently Sweirccke, a Finnish race originally, who were supplanted by the Goths or Scandinavians; the fabulous or traditional history begins about 520, and includes the conquest of Sweden by Ivar Vid-fatme, king of Denmark, 760; there is perfect obscurity until the reign of Bion I., 829. Denmark was conquered by Olaf II., about 900.

SWEDEN, Population of; the king of Sweden having ordered a Register (or <i>Doomsday-book</i>) to be made from 1748, the following estimate of the population was lately presented to him:—The number of	

Swedes, not comprising Finland, amounted in that year to 1,736,483. This number increased, in 1773, to 1,958,797; in 1798, it became 2,352,298; and, in 1823, it was 2,687,457. Thus the annual increase has been 12,680 for the space of seventy-five years.

SWEDENBORGIANs, one of the numerous religious sects of the last century, who found their faith on certain pretended revelations of Emanuel Swedenborg, who was born at Stockholm, an eccentric nobleman of the north: he considered the New Jerusalem of the Apocalypse to be on the point of establishment, and then the true nature of God and of man, of the words heaven and hell, is to be fully explained, and the church will bear its true points of love to God and to our neighbour, and purifier of life; his first work on theology was published in 1743; his sect began abroad in 1760, but did not make much way in England until 1782; he was, though fanciful, a man of strict integrity.

SWEET Bay brought into England from Italy, prior to 1548; the Royal came from Madeira, 1675; the Glancous from China, 1806; there are several other species of this tree in England.

SWIFT, The, of Montrose, run down off Flimborough, and all on board lost, March 5, 1816.

SWITHIN, or St. Swithin, a monk of Winchester of noble parentage, to whom old women and children ascribe an influence over the elements. He passed his youth in the study of grammar, philosophy, and the scriptures. Swithin was promoted to holy orders by Helin-tan, bishop of Winchester, at whose death, in 852, King Ethelwolf granted him the sec. In this he continued eleven years, and died in 868. Swithin desired that he might be buried in the open churchyard, and not in the chancel of the minster, as was usual with other bishops, and his request was complied

with: but the monks, on his being canonized, considering it disgraceful for the saint to lie in a public cemetery, resolved to remove his body into the choir, which was to have been done, with solemn procession, on the 15th July. It rained, however, so violently for forty days succeeding, that the design was abandoned as heretical and blasphemous, and they honoured his memory by erecting a chapel over his grave, at which many miraculous cures of all kinds are said to have been wrought. To the above circumstance may be traced the origin of the old saying, "That if it rains on St. Swithin's, it will rain forty days following!" ●

SWITZERLAND, once a part of Gaul, and afterwards of the Alemanni; at later times it fell to the house of Hapsburgh, from whose power it was happily emancipated in the 14th century; the original population is thought to be Celtic by some, but this is doubtful: the name is derived from the canton of Schweitz, to which canton at present it is confined, the people being denominated Swiss.

SYDNEY, New South Wales, founded by governor Philip in a cove of Port Jackson harbour in 1788, as a settlement for convicts originally intended to be settled in Botany Bay; but Port Jackson was found better situated; since arisen to a large town of considerable extent, with a legislative council, first held July 13, 1829. It is the chief town of New South Wales, which, Dec. 21, 1851, had a population of 113,032 males, and 84,136 females, in all 197,168: the total revenue was £486,698 in New South Wales proper. It appeared that the export of wool during the current year was expected to be seven millions of pounds, being nearly a million more than in 1839. The following figures show the great value of the British trade with New South Wales. Return of the declared value of British and Irish produce exported to New South Wales in the year ending January 5, 1840, with the proportion to similar exports from the united kingdom in the preceding year to other countries.

The declared value of exports to New South Wales, exclusive of the other Australian colonies, Jan. 5, 1840 £1,173,440

The official value of exports on Jan. 5, 1840, to New South Wales, was—

Employing, with passengers, 416 vessels, with a tonnage of 48,911 tons; in return for which exports, the colony sent back, in 1839, 6,894,863lbs of wool, besides oil from the fisheries.

SYNODS, The, first called by the emperors of the East, and subsequently by Christian princes, but the pope afterwards usurped the power, and one of his legates presided; the first held in England was at Hertford, 673; the last held by Cardinal Pole, 1555; it was made unlawful to hold synods without royal authority, 1533, by the 25 Henry VIII. The celebrated synod of Dort was held 1618, whose delegates met from all the reformed churches to settle the points of doctrine, but principally those of justification and free-grace; the Arminians were excluded from the assembly and condemned, but in 1625 were restored to their former position. The synod of Thurles in Ireland was one of Roman catholic prelates and inferior clergy, under Archbishop Cullen, the primate, Aug. 22, 1850; it condemned the queen's colleges, and recommended the founding a Catholic university, Sept. 10.

TAVERNS in London, in the reign of Edward III. only three were allowed, one in Chepe, one in Wallbrooke, and one in Lombard Street: the Boar's Head, in East Cheap, is celebrated by Shakespear, the White Hart, Bishopsgate, was another noted tavern, established in 1480, rebuilt 1829; the number was generally restrained, by an act of Edward VI., 1552, to forty in London, eight in York, four in Norwich, three in Westminster, six in Bristol, three in Lincoln, four in Hull, three in Shrewsbury, four in Exeter, three in Salisbury, four in Gloucester, four in Chester, three in Hereford, three in Worcester, three in Southampton, four in Canterbury, three in Ipswich, three in Winchester, three in Oxford, four in Cambridge, three in Colchester, four in Newcastle-upon-Tyne.

TAXATION and **Taxes**, the means through which governments, not representative, support their own objects and oppress their subjects: revolutions produced by their enormity, as that of France, 1789; taxes in specie were first introduced into England by William I., 1067; assessed, as Charles I. attempted to assess afterwards, namely, by his own will; yet the taxes paid in kind were not abrogated until the reign of Richard II., 1387, being, like the modern income tax, too convenient to dispense with, however unjust in continuance; wool, corn, leather, stock, were all subjected to tax in kind to the king,

and tithe in kind to the church. The supplies voted in 1750 did not exceed 4,969,635*l.*; in 1752 and 1753, they were no more than 4½ millions each year; in the first year of George III., 1760, they were 19,616,119*l.*, such was the waste and cost of needless wars. On Jan. 11, 1757, the whole amount of the national debt was 74,780,880*l.*; in 1786, George III. had raised the national debt to 266,725,097*l.*, declaring he would sooner lay down his crown than make peace with the American rebels; he had attempted to conquer them, and lost England her colonies; in 1793, he commenced an unjustifiable war to replace the Bourbons on the throne of France, and at the peace of 1801 the debt was raised to 637,000,000*l.*,

funded and unfunded, and the taxes levied were 33,081,821*l.*, when the war that again broke out became one of defence: in the years from 1801 to 1814, no less than 633,634,614*l.* were spent in the war outlay, and the burthen of taxation proportionably increased. The amount of the assessed taxes and those on property and income are not all the taxes paid by the nation; the poor rates, church rates, police rates, and highway rates, swell the burthen yet more, and the support of the clergy is a tax upon the means of the country to the extent of 9,000,000*l.*, or more, per annum, which in other countries comes directly out of the revenue of the government. The assessed taxes were in 1851 as follow:—

TAXES, Local; of the yearly total levy of £12,000,000 sterling for "local rates and taxes" in England and Wales, £10,750,000 are raised in England; of that, above 30 per cent. are upon houses, and 52 per cent., or £6,000,000, are levied upon (£30,500,000 sterling as net value or rental of) land in cultivation, comprising 25,500,000 acres of cultivated land. These local rates extended over above 14,000 parishes in 1843, and engaged above 180,000 persons in their collection and expenditure: they include various heads, as county rates, police, roads, church repair, church building, prosecutions, sewers, militia,

coroners, bridges, poor, maintenance of jails and prisoners, prosecutions, &c.

the nature and amount of this odious tax in twelve principal towns was, on March 18, 1835, in £10 houses and upwards, as follows:—

TAYLOR, The Rev. Robert, sentenced to a year's imprisonment for blasphemy, Oct. 24, 1827.

TE DEUM, a specious ceremony of thanks to the God of Peace, offered by those who perpetrate the greatest crimes in war, when successful: Catherine of Russia ordered one on the storming of Ismael by the butcher Swaroff, when every crime was committed that makes humanity shudder; the words used upon such occasions are said to be the composition of St. Augustine or St. Ambrose, 390, and are in themselves not unworthy a great solemnity.

TEA Tree was brought to England from China about 1768; a fine tea plant was reared at Kew, but the attempts to cultivate the plant in England have not succeeded.

TEA; from a paper found in Sir Hans Sloane's library, in the British Museum, it appears that tea was known in England in the year 1657, though not then in general use. The author of this paper says, "That the virtues and excellences of this leaf and drink are many and great, is evident and manifest by the high esteem and use of it (especially of late years) among the physicians and knowing men in France, Italy, Holland, and other parts of Christendom; and in England it hath been sold in the leaf for six pounds, and sometimes for ten pounds the pound weight." In 1678, the East India Company began the importation of tea as a branch of trade; the quantity received at that time amounting to

4713 lbs. The importation gradually enlarged, and the government in consequence, augmented the duties upon tea. By the year 1700, the importation of tea had arrived at 20,000 lbs. In 1721, it exceeded 1,000,000 lbs. In 1816, it had arrived at 36,234,380 lbs. Something more than 30,000,000 lbs. is probably the present average of importation. Hanway ascertained that the price was 60s. per lb. in 1660. Tea continued to maintain a high price for many years; so late as the year 1737, hyson tea was 20s. and 21s. per lb.; green tea, 9s. to 11s.; and black tea, 9s. and 10s. per lb. The only time it was really cheap, was when Mr. Pitt, by way of experiment to prevent smuggling, took off the excise duties. But, notwithstanding the high price, its consumption continued to increase so rapidly that it became an article of the first importance in commerce, and a most abundant source of revenue. From the year 1717 to 1726, there were annually sold in England 700,000 lbs. In less than 60 years the quantity had increased eightfold, as appears by the following average quantities for one year, of each sort of tea sold by the East India Company in ten years, from March sale, 1773, to Sept. sale, 1782, inclusive, viz—

Bolhea	3,075,307
Congou	523,272
Souchong and Pekoe	92,572
Singlo	1,832,472
Hyson	218,839

In the year 1787, twenty-seven ships which arrived from China, imported as follows:—

Bohea.....	6,493,816 nett lbs.
Congou	4,266,136 „
Souchong ...	1,113,900 „
Singlo.....	5,355,251 „
Hyson	1,623,572 „

18,852,675 lbs.

In 1794, the quantity imported was from 16 to 20,000,000 lbs.; and in 1814 there were consumed in England no less than 24,640,000 lbs., and the Custom-house duty, in the course of that year, upon tea sold for internal consumption only, amounted

At 6 per cent. to ... £250,000

And the Excise duty,
at 90 per cent., to. 3,880,000

Revenue from tea

alone£4,130,000

Owing to the increase of smuggling which the peace had created, and the growing, nefarious, and still more fraudulent practice of making imitation tea, the internal consumption of the year 1816 did not exceed 20,480,000 lbs., being less by above one sixth than the consumption of 1814; while the revenue collected amounted to somewhat less than £3,000,000, a decline during only two years of above 4,000,000 lbs., or one-sixth in the weight consumed; and of nearly £1,100,000, or more than one-fourth of the *ad valorem* duties. Green tea began to be used in 1715. The duty imposed on tea in America, 1767. This tax occasioned the destruction of the tea at New York and at Boston, Nov., 1773, and ultimately led to the American war, and the loss of the colonies. Tea-dealers obliged to have sign-boards fixed up, noticing their sale of tea, Aug., 1779. Commutation act for reducing the duty on tea from 50 to 12½ per cent., and taxing windows in lieu, June, 1784. New duties charged, 1796. The duty was 96 and 100 per cent. until July 1, 1836, when by the 6th Will. IV. it was made 2s. 1d. per lb.

Teas imported:—

	lbs.
1726	700,000
1766	7,000,000
1792	13,185,000
1800	23,723,000
1805	24,133,000
1810	25,414,000
1815	26,368,000
1820	25,602,474
1825	27,803,668
1830	30,544,404
1835	44,300,550
1840	38,068,555
1845	51,056,979
1848	55,626,765
1850	53,460,751

The duty derived from the import of tea in 1850, amounted to 45,471,641. Millions of pounds weight of sloe, liquorice, and ash-tree leaves, are every year mixed with Chinese teas in England. The consumption of the whole civilised world, exclusively of England, is about 22,000,000 lbs., while the consumption of Great Britain is from 39,000,000 to 49,000,000 lbs., and since 1850 it is still more. The Chinese originally exchanged tea for sage, they now exchange it against opium and bullion; it is difficult to say whether tea is possessed of any virtue beyond its agreeable flavour and astringency; the late Dr. Letson was not favourable to its use: green tea is highly pernicious to some constitutions, and enervates; hence black is the most wholesome. It has no nutritive property, like wine or malt, drink, which nourish while they exhilarate.

TEDEBURY Church, Gloucestershire, fell down Nov. 17, 1770; rebuilt and opened, Oct., 1781.

TELESCOPES invented in Germany, though the principle was noticed by Roger Bacon, 1250; in 1609 they were perfected by Galileo, who made one that magnified a thousand times; and with it he made several important astronomical discoveries, among which were the moons of Jupiter; these instruments were still further improved by Huygens, New-

ton, and Gregory; reflecting telescopes were invented by Newton; Herschel made his larger telescope 48 inches diameter of the speculum, with a thickness of $3\frac{1}{2}$ inches, weighing 2118 lbs. and magnifying 6400 times; the telescope of Lord Rosse, at Parsonstown, Ireland, is still larger, being 7 feet in diameter and 52 in length.

TELEGRAPH, The, said to have been suggested by the marquis of Worcester, in his *Century of Inventions*, 1663; Dr. Hooke suggested the same thing, 1684; in 1793 it was first applied by the French to useful purposes, and one was adapted and regulated for the first time; one erected over the English admiralty, 1796; the semaphore more simple, 1816; such signals are only made on land, at sea the numbers that compose the letters are represented by different flags, whose indications are changed whenever there is a suspicion that they are known to an enemy.

TELL, William, shot Giesler the Austrian tyrant, and freed his country, 1350.

TEMPERANCE Societies originated with an American minister, Calhoun, 1818, who prohibited spirits altogether in the American army; the first temperance society originated in 1825, in the United States, and the novelty afterwards spread into England and Ireland; in 1831, there were 1000 temperance societies in America; a lecture on temperance took place at Belfast, 1829, and Father Matthew in Ireland made more than a million converts to the principle from 1839 to 1841; he visited America in the latter year, arguing from the abuse, the total disuse of spirits in every possible way.

TEMPLARS, a military order, founded 1118, by Baldwin II., king of Jerusalem; came to England, 1185; suppressed by the council of Vienna, and its revenues given to other orders, 1312; many of the knights burned alive or hanged,

suffering bitter persecutions throughout Europe, and in France especially under Philip de Valois; suppressed finally in England, 1340.

TEMPLE, London, formerly the residence of the knights templars, afterwards of the professors of the common law, and converted into inns of court, the inner and middle; the outer was without Temple Bar, and part of Essex House; the Temple Church was erected by the templars in the reign of Henry II., and contains the tombs of several of the crusaders buried there; the Temple Hall was built in 1572.

TEMPLE Bar, a gateway at the boundary of one of the London outparishes, to which, and no further, the authority of the city extended; built by Sir Christopher Wren, 1672, and once decorated under the Stuarts and first princes of the house of Hanover, with human heads taken off on the scaffold.

TEMPLE of Diana, at Ephesus, destroyed by the Goths, 260; the first temples of ancient art were destroyed by Constantine, 331, because they were devoted to pagan worship.

TENBY Castle, Pembrokeshire, built 1079.

TENERIFFE, one of the Canary islands; the Peak is 15,396 feet above the sea; a fire at Puerta Oratava, in this island, destroyed a convent, when seven women perished, Dec. 11, 1815; and then a deluge of rain drowned 14 individuals more; an earthquake here destroyed several towns and many persons, 1704; it was attacked unsuccessfully by Nelson at Santa Cruz, when he lost his right arm, and 141 officers and men were killed, July 24, 1797.

TENTERDEN, Kent, chartered by Queen Elizabeth

TENTHS of Church Livings first collected in England, 1320.

TENURES held by knightly service, abolished by law 1643.

TERCEIRA Island, discovered by the Spaniards 1583.

TERMS in Law, and Vacations, said to have been instituted by the Normans, the long vacation being adopted on account of the vintage, Will. I., 1079; the terms fixed by statute, July 22, 1830; this act amended, Nov. 15, 1830.

TERRA Firma, North America, settled by the Spaniards, 1524; revolt, and freedom of the colonists from Spain established, 1810.

TESCHEN, in Silesia, reduced to ashes, March 6, 1789.

TEST Act passed, directed against the Catholics and Protestant Dissenters, 1673; repealed, May 1828.

TESTI Muti, order of knighthood, in Wurtemberg, began 1652.

TESTER, a coin of silver struck in France by Louis XII., 1513, and also in Scotland, in the time of Francis II. and Mary queen of Scots, 1559; it was so called from the head of the king which was stamped upon it; in England it bore the value of 12d. in the reign of Henry VIII., and afterwards of 6d.

TEUTONIC or **Marian** order, begun 1192; abolished, 1322; revived in Prussia, 1522.

Tewkesbury, Battle of, in which Edward IV. obtained a great victory over the Lancastrian forces; queen Margaret and her son were taken prisoners here, and she was conveyed to the Tower of London, where king Henry expired a few hours after the engagement, supposed to have been murdered by the duke of Gloucester, afterwards Richard III.; the queen was ransomed in 1475 by Louis XI., king of France, for 50,000 crowns; the battle was fought partly in and near the town of Tewkesbury; it was the last battle between the Houses of York and Lancaster.

Tewkesbury, Town of, damaged by a storm, Aug. 18, 1793; abbey built, 1102.

THAMES, the river rose so high at Westminster that the lawyers were brought out of the hall in boats, 1235; it rose again to a great height, 1736, 1747, 1762, and 1791; the conservancy of the Thames given

to the lord mayor of London, 1489; the Thames made navigable to Oxford, 1624; ebbcd and flowed thrice in three hours, 1658; three times in five hours, March 22, 1682; again twice in three hours, May 24, 1777.

THAMES Tunnel begun 1825; excavation commenced, April 1; first horizontal driving, Dec., 1825; first irruption of water, 544 feet from the shaft, May 18, 1827; second do., in which six workmen perished, Jan. 12, 1828; opened throughout for foot passengers, March 25, 1843; length of the tunnel, 1300 feet; breadth, 35 feet; height, 20 feet; clear width of archway, including footpath, 14 feet; thickness of earth between the tunnel and bed of the river, 15 feet.

THANE, a Scotch title, altered by Malcolm II. to that of Earl, 1057.

THAVIES Inn, London, established 1549; pulled down, 1770.

THEATINS, Order of, founded 1524; established at Paris, 1644: they vainly endeavoured to restrain the luxury of the clergy, and to revive the simplicity and poverty of the apostles.

THEATRES.—The first licence for one in England, 1574, granted to one Burbidge, and other servants of the Earl of Leicester, for the Globe Theatre, Bankside, the admissions to the gallery, 2d.; to the Lords' Rooms, 1s.; the first bill issued, April 8, 1663, from Drury-lane, was for a comedy, called the Humorous Lieutenant, the play to begin at three o'clock; Lincoln's-Inn Theatre was the next opened, 1695. The patent for Drury-lane was granted to Killigrew, April 25, 1662, but the theatre was burned down, 1671; and rebuilt by Sir Christopher Wren, 1674.

Aug. 22, 1843

Before these theatres existed, mi-
racle plays so called, were repre-
sented in the open fields, where the
devil appeared in person on the
stage, shearing the bristles of hogs;
hence the old proverb, "Great cry
and little wool." Plays were op-
posed by the Puritans, 1633, and
suspended till 1660, when Charles
II. licensed Killigrew and Dave-
nant; the first at the Bull, Vere-
street, Claremarket, which in a year
or two was removed to Drury-lane;
the other in Dorset-gardens. Till
this time boys performed women's
parts. Sir William Davenant in-
troduced operas, and both compa-
nies united, 1684, and continued
together till 1694, when, from the
reduced salaries given to the per-
formers, the principal of them, under
Betterton, obtained a licence, and
withdrew to Portugal-street, Lin-
coln's-inn-fields, in 1695.

THEATRICAL Exhibitions are said
to have been exhibited in 1566 by
Geoffry, prior of St. Swithin, Win-
chester.

THEBES, the celebrated city of
the Thebaid in Egypt, which is said
by Homer to have had an hundred
gates, and from each issued out a
thousand experienced soldiers; it
was destroyed by Cambyases, 500
years before Christ, but the ruins of
its stupendous temples and palaces
bid defiance to time, and are yet
continually visited by strangers;
Belzoni opened the tomb of one of
the kings here in 1819. Thebes, in
the Morea, the capital of Beotia,
of which a few huts now alone in-
dicate where it stood.

THEBES punished by compensation
to the injured party, and by a fine;
the Saxons made the criminal re-
deem his life by a ransom: the
power of redemption abolished by
Henry I., 1108; the law revised
and modified in relation to, 9 and 10
George IV.

THEISTS, a class of Deists in
France, who rejected public wor-
ship and exterior forms, but would
unite themselves with all who be-
lieved in God alone; they appeared
1660.

THELUSSEN'S Will, a remarkable
document; he left £100,000 to his
family, and £600,000 to trustees to
accumulate, until the eldest male
heir of his three sons' sons should
be of age; the money to accumu-
late, and to be laid out in the pur-
chase of estates. The will was con-
tested, but confirmed in an appeal
to the lords, June, 1805. The-
lusson died July 21, 1797, and

the stock might possibly accumulate for 120 years, and reach £140,000,000 sterling; should there be no heir the property was to go to lessen the national debt. It got, however, into chancery management, and report stated that it had not doubled its principal more than thirty years afterwards, as might be expected.

THELWALL, Tooke, and Hardy, trial of, for high treason, in having belonged to a society for promoting parliamentary reform; they were tried and honourably acquitted in Nov. and Dec., 1794, not through any failure of effort in the government to hang, draw, and quarter them; they were committed to the Tower, May 20, 1794, and came off through the great abilities and exertions of their counsel, Messrs.

Erskine and Gibbs; Lord Eldon was opposed to the proceedings, being then of the administration, and only wished to prosecute them for a misdemeanour; but Pitt was inexorable, though he had himself brought forward a motion in parliament for the self-same reform.

THERMOMETER, that of Fahrenheit invented about 1726; Reaumur's, 1730; and the Centigrade later. The greatest degree of heat observed by Fahrenheit's thermometer in this country was, on July 13, 1808, when it stood at 96 degrees; on Aug. 6, 1818, it stood at 92 degrees at Tottenham: in 1825-6, the thermometer in a north-cast aspect, in the shade near Hyde-park, stood at 85 degrees, July 14, at noon. .

THETFORD Monastery founded 1103.

THIEFTAKERS condemned and pilloried in Smithfield, March, 1755.

THISTLE, Order of the, in Scotland, founded 1540; some pretend it is much more ancient; revived in 1687, March 29, by James II. of England; the Duke of Gordon, the Marquis of Athol, the Earl of Arran, afterwards Duke of Hamilton, the Earls of Moray, Perth, Seaforth, Dumbarton, and Melford were the first knights. Thistle of Bourbon, order of, begun 1370.

THISTLEWOOD, Brunt, Ings, Davidson, and Tidd, arrested for the Cato street conspiracy, Feb. 23, 1820; executed May 1, 1820; the criminals, there is good reason to believe, attributed their being led into their desperate conduct by government spies.

THOMAS, Island of St., West Indies, 900 stores and warehouses at, burned, valued at £600,000, Nov. 22, 1805.

THOMAS', St., Hospital, Southwark, founded 1553.

THOMAS, St., Festival of, instituted 1130.

THOMITES, the name of a party of the poorer class, whose ignorance led them to follow an impostor named Thom, pretending to particular revelations, and calling himself king of Jerusalem: he declared himself invulnerable, and shot a constable ordered to apprehend him; a party of military were sent to Boughton, near Canterbury, after him, the officer in command of which, on ordering him to surrender, he shot dead, on which he was himself shot by one of the soldiers; his devotees then attacked the military, who were compelled to fire on them,

and several were killed. Thom is yet considered a saint by his wise followers of Kent, May 31, 1838.

THOMPSON, Mrs., died near Dublin, Oct. 1796, aged 135.

THORACIC Duct discovered in a horse by Eustachius, 1563, and in the human body by Bartholine of Copenhagen, and Joliffe of England, 1654.

THORESBY, the duke of Kingston's seat, Northamptonshire, burned, with the paintings and furniture, April 4, 1745.

THORVETON, near Exeter, seven-teen houses destroyed at, by fire.

THORN, in Prussia, founded 1232.

THORNHILL, Mr., of Sutton, rode 215 miles in twelve hours seventeen minutes, April 29, 1745.

THORNBURY Castle, Gloucestershire, built 1510.

THORNTON College, Lincolnshire, built 1174.

THRACE conquered by the Turks under Mahomet II., 1453.

THRESHING Machines invented by Michael Menzies of Edinburgh, 1732.

THREAD first made at Paisley, in Scotland, 1722.

THREATENING Letters made punishable, 1730; and again by 30 George II., 1756.

THUILLERIES, in Paris, built 1600.

THUMBSREW, an instrument of torture used in the Inquisition, and also in England when ordered by the privy council, though torture was declared by the judges contrary to the law of the land; at the revolution of 1688, it was abolished; Carstairs, accused of having a guilty knowledge of the Rye-house plot, was the last put to the torture in the reign of Charles II., about 1682; the privy council of king William made him a present of the instrument, 1688.

THUROR's invasion of Carrickfergus, Ireland, which he plundered, but was overtaken by Captain Elliot, who took his squadron, and he was killed, Feb. 28, 1760.

THYNNE, Thomas, shot in his car-

riage in Pall-Mall, Feb. 12, 1682, by assassins hired by Count Konigsmark, who was himself assassinated by order of George I., jealous of him without cause.

TICE, Mr., died at Hagley, Worcestershire, Feb. 26, 1774, aged 125.

TICHFIELD Abbey, Hants, built 1232.

TIARA, the ecclesiastical crown with which the pope, to prove his Christian humility, was crowned for the first time in 1053; John XIX. had it encircled with a crown, 1276; Boniface VIII. added a second, 1295; and Benedict XII. a third.

TICONDEROGA taken by the English, 1759.

TIDALS, their theory first elucidated by Kepler, 1591; but Sir Isaac Newton gave proof of the correctness of the theory by gravitation, between 1680 and 1690.

TIDE ebbed and flowed three times in an hour at Lyme, in Dorset, May 31, 1682, and four times in an hour at Whithy, July 17, 1761; three times in two hours on the Kentish coast, Oct. 31, 1827.

TILES first used in England, 1246; taxed, 1784; the number taxed in 1820, 81,924,626; and in 1830, 97,318,264; tax discontinued, 1833.

TILLY, Count, killed, 1632.

TILSIT, Treaty of, between France and Russia, when Napoleon gave back half his kingdom to the king of Prussia; Russia acknowledged the confederation of the Rhine, and the elevation of Napoleon's brothers to the thrones of Naples, Holland, and Westphalia, July 7, 1807.

TILTS and Tournaments instituted in Germany, 919; abolished in England, 1400; in France, 1560.

TIME, first computed from the Christian era, 516; in history, 748; in Spain, 1358; in Arragon and Castile, 1383; in Portugal, 1415.

TIME measure barometer introduced by Scipio Nasica, 159; King Alfred's timekeeper was six large wax tapers, each twelve inches long; as they burnt unequally, owing

to the wind, he invented a lantern made of wood and thin-scraped plates of ox-horns, glass being a great rarity, 887. The ancients had three sorts of time-measures, hour-glasses, sun-dials, and a vessel full of water with a hole in its bottom.

TIN found in Cornwall since the trading times of the Phœnicians, 1200 years before the Christian era; small quantities have been found in Spain and Britany: tin is found in considerable quantities in Banca, an island of the Indian ocean: it was also found in New Spain, 1782. The quantity of tin in Cornwall to have been raised for so many ages is surprising: in 1750, 2876 tons; and in 1834, 4180 tons were raised: of Banca, or foreign tin, 35,826 cwt. were imported 1849, and 8540 cwt. re-exported: the duchy of Cornwall and the tin dues were bestowed by Edward III. on the Black Prince, 1335; about 35,292 cwt. of British tin were exported, and tin plates to the value of £727,825, 1849.

TITHES conferred by Offa, king of Mercia, upon the church about 794, Selden thinks in 786, to expiate a murder that prince had committed. They were voluntary until 1180, being paid before that time to such monasteries and churches as the people chose. The Lateran council compelled them to be paid in the parish where the tithed lived. Tithes were never heard of in the first five or six centuries of Christianity. They consisted at first only of the fruits of the earth; but they were afterwards claimed by the greedy ecclesiastics of those times from personal labour, and enjoined by the canon law. This, it is probable, was found oppressive, as then labouring people, although they foolishly believed the parson could decide their future happiness or misery, were disinclined to give up a tenth of their toil even for so important an end. The clergy of that day therefore condescended to accept offerings or oblations in their room at

Easter, wisely reasoning, that if they persisted in taking tithes from personal labour they might get nothing at all in the end. In Wales they tithed marriage goods. Statutes were at last passed to restrain the clergy from exacting tithes from day-labourers and the poor in spiritual courts,—a thing they had practised before without compunction. Not a mill nor an operation of human industry escaped. The legislature, and courts of law, were ultimately obliged to interpose for the subject's protection. Where the custom of forty years was proved, the church obtained tithes even out of fish in the ocean, at length a tithe commutation was passed, Aug. 13, 1832; a tithe composition act, Aug. 16, 1832; and in 1838 an act was passed, 2 Vict., to substitute rent charges in lieu of the composition; the composition arrears act, March 27, 1839; amendment act, May 19, 1840; the payments settled averages of every seven years in the following mode:—

Tithe rent charge per cent. for seventeen years to Christmas, 1852, being the result of the corn averages. Wheat, 6s. 0½d.; Barley, 3s. 9½d.; and Oats, 2s. 6½d. the imperial bushel.

TITLES, first creation of, by patent, 1344.

TITLES, Royal: the following is the succession in which the royal titles swelled in England:—Henry IV. had the title of "Grace" conferred on him; Henry VI. that of "Excellent Grace;" Edward IV. that of "High and Mighty Prince;" Henry VII. "Highness;" Henry VIII. "Majesty" (James I. was the last that was styled "Dread Sovereign"); and James I. that of "Sacred," or "Most Excellent Majesty." That of "Majesty" was first given to Louis XI. of France; before, it was the title only of emperors. The kings of Arragon, Castile, and Portugal, had the title only of "Highness;" those of England, "Your Grace," those of France, "Your Despotism." Titles of families abolished in France, 1790.

TIVERTON Castle, Devonshire, built 1110.

TIVERTON, 200 houses burned down at, June 5, 1731; on May 26 and 27, 1762; between 60 and 70, 1785; and 200 on June 30, 1794.

TOBACCO, "The Counter-blast to," written by James I., king of England, 1607; persons taking tobacco in church to be excommunicated by a bull of Pope Urban VIII.; grown and did well about 1657 at Winscombe in Gloucestershire, but was stopped on account of the duty obtained on its importation.

TOBACCO received its name from Tabacco, a province of Yucatan, New Spain. Some say from the island of Tobago, one of the Caribbees; others from Tabasco, in the gulf of Florida. It was first observed at St. Domingo, A.D. 1496; and was used freely by the Spaniards in Yucatan, in 1520. Tobacco was first brought to England, 7 Eliz., 1565, by Sir John Hawkins; but Sir Walter Raleigh and Sir Francis Drake are also mentioned as having first introduced it here. It was manufactured only for exportation for some years. In 1584 a proclamation was issued against it. The

Star-chamber ordered the duties to be 6s. 10d. per pound, 1614. By various acts passed in the reign of Charles II., tobacco was forbidden to be planted in England, on forfeiture of forty shillings for every rod of ground thus planted, excepting in physic gardens, where it is allowed in quantities not exceeding half a pole of ground, 1684. Justices of peace have power to issue warrants to search after and destroy the same. It appears that walnut-tree leaves have been used as a substitute for tobacco; 5 Geo. III., c. 11, forbids the cutting of walnut-tree leaves, or other leaves (not being tobacco leaves), or colouring them so as to resemble tobacco; or selling the same, mixed or unmixed, for tobacco; under a penalty of forfeiting five shillings a pound, &c. It is said that, in 1750, Maryland and Virginia produced to England more than 100,000 tons of tobacco; of which, it is said, the English kept one half for their own consumption, and exported the remainder to France; for which the latter country paid annually the sum of 9,200,000 livres, or about £383,333 English money: the cultivation allowed in Ireland, 1779. The tax increased and put under the excise, 1789. Various statutes have been passed relative to tobacco: act to revive the act prohibiting the culture of tobacco in Ireland, passed 2 Will. IV., Aug. 1831; act directing that tobacco grown in Ireland be purchased in order to its being destroyed, March 24, 1832. The quantity consumed in England in 1791, was 9,500,000 lbs., and in 1829, about 15,000,000 lbs. In 1840, the quantity had reached to 40,000,000 lbs. In 1850, the whole quantity imported was 43,551,954 lbs., of which 1,905,306 lbs. were manufactured.

TOBAGO, island of, settled by the Dutch, 1642, taken by the English, 1672; retaken, 1674; declared a neutral island, 1748; in 1763, ceded to the English; taken by the French under de Grasse, 1781; confirmed to

them, 1783; taken by the English, April 14, 1793; restored 1802, at the peace of Amiens; taken by the English, July 1, 1803, and confirmed to them 1814, at the general peace.

TOKENS issued by the Bank of England, passed for 5s., January 1, 1798; raised to the value of 5s. 6d., Nov. 14, 1811; passed in Ireland for 6s. until the year 1817.

TOLERATION Act, by which the sovereign conceded to British subjects, 1689, that which was the natural right of every man, to think for himself in matters of religion: queen Anne, the enemy of civil and religious liberty, like her father James II., died the very day that the schism bill was to become a law, Aug. 1, 1714; and thus another high church persecution was prevented.

TOLLS exacted by Denmark in the passage to the Baltic; *see* Sound. First used on turnpikes, 1663; first collected in London for repairing the highways of Holborn, St. Martin's Lane, and Gray's Inn Lane, 1346.

TOMBS of the kings of Egypt opened by Belzoni, 1819; of the abbey of St. Denis, France, ordered to be destroyed by the national convention, Oct. 14, 1793.

TONNAGE and Poundage, duties on wine and other goods imported or exported, granted to the king of England for life, 5 Edward IV. 1465; the poundage was a percentage on goods only.

TONNAGE belonging to the larger ports, 1852:—

TONTINES, Loans for Life Annuities, given out to the people as a chance of making enormous interest, 1653. In 1798, there died a Mr. Jennings, aged 103; he had purchased a share of £100 value in a

tontine company, and, being the last survivor, his share produced him £3000 per annum.

TOPLITZ, Battle of, between the Austrians and the Prussians, in which the last were defeated, 1762; Aug. 30, 1813, between the French and allies; treaty of, between Russia, Austria, and Prussia, Oct. 3, 1813.

TORGAU, Battle of, between Frederick the Great of Prussia and the Austrians, in which he obtained a great victory; the Austrian commander, Count Daun, was wounded. Daun had before been victorious over Frederick in 1757; the town of Torgau taken by the allies, 1814.

TORRIGOS, General, treacherously entrapped to Malaga by Ferdinand VII. of Spain, and then shot in the market-place without a trial, Dec. 10, 1831.

TORRINGTON, Devonshire, incorporated by Queen Mary, 1554.

TORTURE used by the Romans, against slaves only; used in the Roman Catholic church against heretics and schismatics; used in England, though declared contrary to law, in the reign of Elizabeth, and in Scotland under James II., until 1690; abolished in Portugal, 1776; in France, 1780; in Sweden by Gustavus III., 1786.

TORY, said to have been derived from an Irish word for savage, applied to an oppressive collector of tithes and taxes; the Cavaliers and Roundheads, terms used during the commonwealth, are said to have been exchanged for Tories and Whigs, the Tories supporting the arbitrary power and divine right of kings, and the Whigs friends to civil and religious freedom, 1679; after all, the exact origin is uncertain.

TORTNESS, Devonshire, Archdeaconry of, appointed before 1143.

TOUCHING for the Evil, introduced by Edward the Confessor, 1046; custom given up by George I.; service for, given up in the church in the beginning of the eighteenth century.

TOULON, in France, bombarded

by the allies, 1706, and reduced to a heap of ruins, also some ships burned, but the siege was raised; besieged by the French in 1793, having been previously given up to the British, Aug. 22; the siege was so pressed through the activity of Bonaparte, then a young officer of artillery, that the English were compelled to evacuate it, Dec. 19, after setting fire to the dockyard, and burning several line-of-battle ships.

TOULOUSE, France, founded six centuries before the Christian era; a tribunal of a fearful nature established there by the Catholics to extirpate heretics, 1229; the Tronbadours originated here, 850; the British and allies under Wellington entered the town, April 12, 1814.

TOULOUSE, Battle of, the last contest between the French and English armies in the south of France, April 10, 1814. The battle continued twelve hours, and was of the most sanguinary character; but the French were forced from all their positions, with the loss of 9000 men, the victorious army lost between 4000 and 5000; at the same period Bonaparte had abdicated the throne, but neither of the commanders was aware that hostilities had ceased in Paris.

TOURNAMENTS, *see* Tilts.

TOURNAY taken by the allies, 1709; ceded to Austria by the treaty of Utrecht, to have a Dutch garrison; taken by the French, Nov. 11, 1792; battle of, between the English, Austrians, and the French, May 8, 1793; skirmish between the British and French, May 6, 1794.

TOURNIQUET, an instrument used for compression, invented by Morelli, 1674; new screw tourniquet invented by Petit of France, 1718.

TOURLONGE, Cardinal, the high inquisitor of Rome, dragged out of his carriage, and hanged like Haman, on a gibbet fifty feet high, by an incensed mob, 1786.

Tours, Battle of, won by Charles

Martel over the Saracens, near Tours, which stopped their progress in Europe, that would else have all become Mahometan, Oct. 10, 732.

TOWERS, Round, in Ireland, the only old stone structures found except in the maritime towns which the Danes erected; fifty-six of these remain from 50 to 130 feet high, mere hollow pillars with conical roofs, having lateral holes to admit light. One within the circuit of the walls of the Tower of London giving the name, built 1078, walled in 1099; the White tower was completed in the time of William Rufus, 1098, who finished the walls and excavated the ditch; the new buildings in the Tower completed, 1850.

TOWER Hamlets, London, made a borough, 1832.

TOWNE of the Winds, Athens, a relic of the early city, built before the Christian era.

TOWNE, Leaning, at Pisa, built 1174; a still more remarkable one, from its inclination, at Caerphilly Castle, South Wales.

TOWERS, Churches first decorated with, 1000.

TOWTON, Battle of, fought between the Houses of York and Lancaster, or Edward IV. and Henry VI.; the latter was defeated, and 37,000 of his subjects fell, to whom Edward ordered no quarter to be given. This battle was won by the talents and experience of the earl of Warwick, who killed his horse before the combat began, to indicate that he would conquer or die; fought on Palm Sunday, March 29, 1461.

TRADE and Plantation Office formed, Nov. 7, 1660.

TRAFALGAR, Battle of, fought Oct. 21, 1805, off Cape Trafalgar, between the English under Nelson, and the combined fleets of France and Spain; the allies had 33 sail of the line, the English 27. After an obstinate battle the French were defeated, with the loss of 19 sail of the line; but Nelson was mortally wounded, and died in an hour or two after the battle was over.

TRAJAN, Marcus, a Roman emperor who governed between 52 and 117; his pillar, erected 114, yet stands entire at Rome, 140 feet high, but the popes crowned it with an apostle! a piazza at Rome built round by him, 100.

TRANSFIGURATION, Festival of the, first observed, 700.

TRANSFUSION of Blood first practised in France in the 15th century. Louis XI., when dying, drank the warm blood of infants under the notion of preserving life, 1483; trials were made of transfusion upon animals in Paris, and then upon the human body; of five operated upon, two died, 1668; practised in England, 1691; the idea is said to have been originally suggested by an Oxonian, named Wrean; in 1797, the trial was again made in France, but rarely with success, though in some few instances it seems to have answered.

TRANSLATION to Heaven; the Irish House of Commons expelled a Mr. Asgill, because he wrote a book asserting the possibility of translation to the other world without death, 1703; the House thereby publicly denying the records of the creed to which they had sworn, in order to take their seats in parliament, "on the true faith of a Christian."

TRANSPORTATION, a punishment inflicted by the 39th Elizabeth, 1590; banishment was pronounced for criminal offences much earlier. It was the merited reproach of England, that death or transportation was long inflicted for trivial offences compared to the sacrifice of a life; John Eyre, a man of fortune, was transported for stealing a few quires of paper, Nov. 1, 1771; Dr Halloran for forging a frank in his pupil's name, value 10d. postage, Sept. 9, 1818; transportation to New South Wales began, May 1787; returning from transportation was made death until 1834, when it was changed to transportation for life.

TRANSUBSTANTIATION introduced into the church as an article of faith,

840; confirmed, 1000; admitted in England, 1066; belief in, necessary to salvation, declared by the council of Placentia, 1095; the word to describe it "transubstantiation" first introduced by Peter de Blois, 1165; John Huss first opposed the doctrine, and he was answered by being burned, under order of the council of Constance, 1415.

TRANSYLVANIA bestowed on the House of Austria, 1699.

TRAPPISTS, the monks of La Trappe, a French order of strict discipline, but not to the severe extent reported of it—perpetual silence is only enjoined in particular apartments of their monastery; the English and Irish were ordered to quit France in 1631 from their establishment at Meilleraie, and they have since formed themselves into a society at Mount St. Bernard, in Leicestershire, where, by the labour of their hands, they are converting a sterile desert into fertile ground.

TRAVELLING; only six coaches were on the roads for all England in 1672; and one John Cresset of the Charter-house wrote a pamphlet to shew the necessity for their suppression. At a later period, the following advertisement tells its own tale:—"York four-days' Stage-Coach.—Begins on Friday the 12th April, 1706.—All that are desirous to pass from London to York, or from York to London, or any other place on that road, let them repair to the Black Swan in Holbourn, in London, and to the Black Swan in Coney-street, in York. At both which places they may be received in a light coach every Monday, Wednesday, and Friday, which performs the whole journey in four days (if God permit), and sets forth at 5 in the morning, and returns from York to Stamford in 2 days; and from Stamford, by Huntingdon, to London, in 2 days more; and the like stages on the return."—Again, 1712, "Edinburgh, Berwick, Newcastle, Durham, and London Stage-Coach

begins on Monday the 13th October, 1712. All that desire to pass from Edinbro' to London, or from London to Edinbro', or any place on that road, let them repair to Mr. John Baillie's, at the Coach and Horses, at the Head of Cannongate, Edinbro', every other Saturday, or to the Black Swan, in Holborn, every other Monday, at both of which places they may be received in a Stage-Coach, which performs the whole journey in thirteen days, without any stoppage (if God permit), having 80 able horses to perform the whole stage. Each passenger paying £4, 10s. for the whole journey, allowing each passenger 20lb. weight, and all above to pay 6d per pound. 'The Coach sets out at six in the morning.' In 1825, the mail-coach did this distance in 46 hours. In 1780, the first stage-coach between London and Maidstone left at six in the morning, and only arrived at half-past 8 p.m., a distance of 34 miles. The coaches went about 7½ miles an hour on the average, and the mail-coach charge was 52s inside per 100 miles, and 30s. outside; first common coaches 42s. inside, and 26s. out, exclusive of coachman and guard. The railway takes the passengers, without coachmen or guards, the same distance for 20s. and 12s., at 30 or 40 miles an hour, 1850.

TRAVELLING post, in the time of James I., 1610, letters were conveyed by men who rode post; those who took government despatches were hanged in the time of Henry VIII. if dilatory; letters were indorsed "Haste Post! Haste!" and a gallows was often sketched on the letter; in 1626, a letter was indorsed and addressed by Mr. Bagg, deputy mayor of Plymouth, to Sir Edward Conway:—

"For His Majesty's especial service.

"To the Right Honourable Sir Edward Conway, Knight, one of his Majesty's principal secretaries; these, at Court.

"Post hast—post hast—hast—hast—with speed.

"Plymouth, 17th June, 1623, eleven o'clock in the morninge.

"Ashton (Ashburton), 17 June, 1623, four o'clock in the afternoon.

"Exeter at four in the morning, June 18, 1623.

"Received this packet at Honiton. at eleven o'clock in the forenoon.

"Sherborne, late at night, 18 June, 1623.

"At Sarum, 19 June, at six in the morning.

"Andover, past nine o'clocke in the morninge, 19th day of June.

"At Basing, at twelve at noon.

"Hartford Bridge, half past two in the afternoon

"Staines, at past five o'clock in the afternoon.

"Stroud (the Strand) at house, past eight o'clock at night."

The post, riding, according to the proverbial saying, "for his life," was 17 hours on the road between Plymouth and Exeter, a distance only of 41½ miles. Seven hours were consumed from Exeter to Honiton, the distance of 16½ miles; from Honiton to Sherborne, in Dorsetshire, 35 miles, occupied about 11 hours; from Sherborne to Salisbury, 34 miles, 10 hours; Salisbury to Andover, 17½ miles, say 3½ hours. The courier, now upon the beaten line of the old Roman road, passed to Basingstoke, 19½ miles from Andover, in 3 hours; from Basingstoke to Hartford-bridge, 10 miles, occupied him 2½ hours; from Hartford-bridge to Staines, 19 miles, about 3½ hours; the remaining 19 miles, to the residence of Mr. Secretary Conway in the Strand, where he delivered his despatch, consumed nearly 3½ hours. A distance, therefore, of 212 or 214 miles was traversed in 57 hours, the average being little more than 3½ miles in the hour. The Defiance coach in 1835 traversed the whole distance between London and Plymouth in 27 hours. The railway

express completes the distance in 7 hours, 1853.

TRAVELLING abroad, a licence to travel abroad required from British subjects to be paid to the crown, 10 Charles I., 1635, an open and direct infringement of Magna Charta; gross attempts made to tax travellers and absentees, 1753, but all failed meritedly.

TREADMILL, a Chinese invention to irrigate their lands, copied in England as an instrument of punishment for felons, and introduced into Brixton jail, 1817.

TREASON punished in England only by banishment until the reign of Henry I.; defined by Edward III., 1349, two witnesses required to convict; the punishment sanguinary, and of the most vengeful character—to be hung by the neck, but not until dead, the howels to be torn out before the writhing sufferer's face and cast into the fire; the heart to be afterwards torn out and burned, the mangled body to be beheaded and quartered, the head and quarters to be stuck up in public places, for which purpose they were parboiled in caldrons with spices and herbs, to preserve them as long as possible from decay; portions were sometimes sent to be displayed in different parts of the kingdom. Burning alive was practised for petit treason against the king's image, as in coining, or the murder of a bishop or other ecclesiastic by an inferior, of a husband by a wife, or of a master by a servant; for the reverse, a husband or master was hung. The last victim to this law was a woman for coining, 1787; she was burned at the Old Bailey 28 years after George III. had reigned, however incredible it may appear; a bill was brought in to abolish burning, 1788.

TREASURY Office, Westminster, built 1732.

TREASURER, Lord High, of England, the crown's third great officer; Odo, Earl of Kent, was the first, 1069; the office is now filled by the

commission called the Treasury, with its lord commissioners; the first officer of this rank in Ireland was John de St. John, 1217.

TREATIES, first commenced, made with the Flemings, 1272; with Portugal and Spain, 1308.

TREE, the Elm, under which William Penn made his treaty with the Indians, at Senecamaxon, in the year 1682, became celebrated from that time. When, in the American war, the British general Simcoe was quartered at Kensington, he so respected it, that upon his soldiers cutting down every other tree for firewood, he placed a sentinel under this memorable tree, that not a branch of it might be touched. In 1812 it was blown down, and its trunk was then split into wood, and cups and other articles were made from it, to be kept as memorials.

TREHONEY, Cornwall, incorporated 1620.

TREMATON Castle, Cornwall, built before the conquest, and quite perfect until a Mr. Tucker pulled down a part to accommodate a dwelling-house, about 1807-8: it belongs to the duchy of Cornwall, and existed before the conquest, 1066.

TRENCK, Baron, celebrated for his adventures and imprisonment, beheaded in Paris, 1794.

TRENT, Council of, the 18th in the Roman Catholic church, 1545; its decisions are considered strictly orthodox by the faithful; the sittings of the councils were continued under Pope Paul III., Julius III., and Pius IV., to 1563, when the last council sat.

Tri juncta in uno, the motto of the Order of the Bath, first used, it is said, by Richard II., and also by Henry IV., 1399, and on the revival of the order by George I., 1725.

TRIAL by Battle, abolished in England so late as 1818, by act 59 George III., c. 46. The last appeal to this ancient custom was in the case of Ashford v. Thornton. The defendant was tried for the murder of a female. He was acquitted, there not being sufficient evidence to establish his guilt. The brother and next heir of the murdered woman appealed, in order to bring the matter again before a jury. The accused man asserted his right to

prove his innocence by battle. The judges acknowledged his right to do so; and the legal antiquaries would have been gratified with the rare spectacle of a judicial duel, but for a voluntary abandonment of the prosecution. The law was soon afterwards passed, abolishing the wager of battle.

TYRE, Era of, begins Oct. 19, 125 a.c.; to reduce this era to our own, subtract 124, and if the given year be less than 125, deduct it from 125, and the remainder will be the era before Christ.

U

UBIQUITARIANS, a Lutheran sect, which at one time spread over Germany and through other countries; they believed the natural body of Christ to be every where present: the sect arose in 1540, but never to any considerable numbers.

UDINA, Giovanni da, celebrated as the reviver of stucco-work; he died 1564.

UKRAINE, or the Frontier, as the term imports. By a treaty between Russia and Poland, they divided the

Ukraine, 1693; Poland had the west side of the Dnieper, and Russia the east, but the borders of Poland, Russia, and Little Tartary were appropriated by Russia, 1795, according to the iniquitous treaty of partition, the same year.

ULM, Peace of, by which Frederic V. was utterly deprived of Bohemia, having been previously driven from it, July 3, 1620; taken by the French, 1796; great battle of, between the French and Austrians,

in which General Mack was defeated by Marshal Ney with great loss, and Ulm surrendered in consequence with 30,000 men, the flower of the Austrian army, Oct. 19, 1805.

ULVECROFT Priory, Leicestershire, built 1167

UMBRELLA, the first person who used the umbrella in the streets of London was Jonas Hanway, who died 1786.

UNCTION, Extreme, a ceremony originally of the Jews, who anointed themselves with oil upon particular occasions, and hence the imitation of the ceremony; it was in common use about 550; the first who received extreme unction from the pope was St. Asaph, 590; "extreme" unction applied only to the dying.

UNIFORMITY, Act of, passed, 1559; came into first operation, 1602; obliging all the clergy to subscribe the same 39 articles and to use the same form of worship; upwards of 2000 ministers quitted the church of England upon that occasion, joined the dissenters, and ranked among the fathers of the dissenting interest, 1661, 1662.

UNION of the Three Crowns; England and Scotland became united by the accession of James VI. of Scotland as James I. of England, March 24, 1603; in 1604, the union of the two kingdoms was attempted, but failed, 1670; the Tories opposed the union in 1706, in the House of Commons, but it became a law, June 16, and was ratified by the Scotch Parliament, Jan. 16, 1707. Union with Ireland proposed in the Irish parliament, Jan. 22, 1799; rejected by the Irish Commons, Jan. 29, 1799; the plan of the union detailed, Feb. 5, 1800; the act passed the British parliament, July 2, 1800; the united standard of England and Ireland first displayed on Dublin castle, Jan. 1, 1801; the realm thence became the united kingdom of Great Britain and Ireland, the title to France being dropped.

UNION Packet, of Dover, lost off

Calais, Jan. 28, 1792, the first accident of the kind for 105 years.

UNION Fire-Office established 1715

UNITARIANS, who worship only one self-existent deity, in place of three equal deities in one, arose under Servetus, 1553; on his passing through Geneva, proceeding to Naples, in that year, Calvin incited the magistrates to arrest him on charges of blasphemy and heresy, and on his refusing to retract his opinions condemned him to be burned; this murder took place, Oct. 27, 1553; the Unitarian marriage bill passed, June 1827.

UNITED Provinces once subjected to Spain; became a republic, shaking off the Spanish yoke, 1579; deputies from the provinces of Holland, Zealand, Utrecht, Friesland, Groningen, Overysse, and Guelderland, met at Utrecht, Jan. 23, 1579, and signed a treaty of mutual defence, appointing the Prince of Orange stadtholder, thus forming the union of Utrecht, or the foundation of the Seven United Provinces. In 1609 their independence was acknowledged; Holland was united to France, 1796; Louis Bonaparte crowned king of, June 5, 1806; he abdicated, July 1, 1810; Holland restored to the house of Orange, with Belgium annexed, Nov. 18, 1813; separated from Belgium, and Leopold of Saxe-Coburg elected king, July 12, 1831.

UNIVERSITY College, Oxford, founded 1249; library of, completed 1669.

UNIVERSITY Statistics of France. The returns forwarded to the minister of public instruction by the rectors of the university of Paris, from which it appears that the royal colleges throughout France contained in 1844, 21,890 pupils, or 1123 more than last year, and the district colleges 35,388, showing an increase over 1843 of 2291. The whole number of pupils in the royal and district colleges is consequently 57,278, or 3414 more than in 1843. This last year, likewise, exhibited an augmentation of 1984 pupils, so that in the course of two years the number of pupils following the lectures in these colleges increased by upwards of 5000, in spite of the war waged by the clergy against the university.

UNKNOWN Tongues, under a pretended inspiration, sundry disciples of the late Edward Irving suddenly held forth and harangued in a gibberish no one could understand, Oct. 16, 1831; the fact being overlooked, that the gift of tongues to the apostles was the gift of the living languages of their time, to enable them to preach to the Gentiles: the disciples of, and others knew not what they uttered, and others were in the same state of ignorance, yet there are still many believers in this senseless delusion, saying so little for the good sense of the age.

UPNOR Castle, built 1561.

URANUS, the name now given by astronomers to the planet discovered by Herschel, and so unluckily named the "Georgium Sidus," discovered March 13, 1781, by Herschel, whose name is sometimes bestowed upon it. The distance of Uranus from the sun is twice that of Saturn.

URINE employed in the manufacture of gunpowder and in the woollen manufacture: a statute for its preservation to manufacture saltpetre, 1626. Uric or lithic acid obtained from, by Scheel, 1776.

URSULINES, an order of nuns, established 1198.

USHANT, Battle of, between the English and French fleets, when the latter withdrew into Brest harbour. The English were commanded by Admiral Keppel, who was tried for his failure in obtaining a more complete result, and honourably acquitted, July 27, 1778.

Usury forbidden by law, 1341; 2s. per week fixed as the interest for 20s., 1260; this limit restrained, 1275; fixed at 10 per cent., 1545

and 1570; reduced to 8 per cent., 21 James I., 1623, when the word "interest" was used in place of "usury;" it was reduced to 6 per cent., 1650; continued at 6 to 1660; made 5 per cent., 1714.

UTRECHT, Treaty of, terminating Queen Anne's wars, April 11, 1713; town of, surrendered to the Prussians, May 9, 1787; taken by the French, Jan. 18, 1795.

V

VACCINE inoculation established on the discovery of Dr. Jenner, May 1796; made public, 1799; received £10,000 for the discovery from parliament, 1802; royal Jennerian institution founded, Jan. 19, 1803; practised throughout Europe, 1816; act respecting adoption of, passed July 23, 1840.

VAGRANTS and Beggars. A vast number of poor were employed or maintained in and about the monasteries, and when they were seized upon by Henry VIII., the humbler dependents were turned loose to beg, starve, or thieve; they were then mercilessly punished: this accounts for 75,000 persons having been put to death in the reign of the royal plunderer. He passed an act that a vagrant, after being whipped, was to take an oath to return to the place where he was born, or had last dwelt for three years, 22 Henry VIII., 1530; a second time convicted, he was to lose the upper part of the gristle of his right ear, 27 Henry VIII.; and a third time convicted, death. Vagrants were punished by whipping, jailing, boring the ears, and death for a second offence, 14 Eliz., 1571. The milder statutes were those of 17 Geo. II.; 32, 35, and 59 Geo. III. The laws against beggars are still very severe in England.

VAILS to servants abolished in the world of fashion, 1764.

VALENCIA, Spain, conquered by the Moors, and then lost by them, 1094; relinquished to them by the King of Castile, and then taken again by James I., king of Arragon, 1238; and with Arragon united to Spain, 1492; university of, founded early, revived in 1470; city of, taken by the Earl of Peterborough, 1705; submitted to the Bombois after the battle of Almanza, 1707; taken by Marshal Suchet with 16,000 men, and immense munitions of war, Jan. 9, 1812.

VAL de Grace, Paris, built 1666.

VALENCIENNES taken by the French from the Spaniards, 17th March, 1677; besieged and taken by the allied armies after seven weeks' siege, in May and July, 1793; retaken, together with Condé, by the French six weeks afterwards, together with 1100 emigrants arrayed against their country. 200 pieces of cannon, a million pounds weight of powder, 8,000,000 florins in money, 1000 head of cattle, and large stores of provisions, Aug. 30, 1794.

VALENCAY, Treaty of, between Napoleon and Ferdinand VII. of Spain, by which that graceless monarch was put in full possession of his

kingdom, on his agreeing to maintain its integrity, Dec. 8, 1813.

VALENTINE'S Day. Valentine, a Roman bishop, or, according to others, only presbyter of the church, was beheaded under Valerianus, A.D. 278, Feb. 14. It is said that on this day the birds choose their mates, whence, probably, came the custom of young people choosing valentines, or particular friends, on this day.

VALENTINE'S Day, remarkable events upon. In 1684, Sir Samuel Barnardiston fined £10,000 for using a few indiscreet but innoxious expressions of a political nature, in some letters. In 1779, Capt. James Cook killed at Owhyhee, one of the Sandwich Islands: he was born at Marton, in the north part of Yorkshire, Oct. 27, 1728. In 1780, died that illustrious lawyer, Sir William Blackstone, author of a celebrated work, entitled, "Commentaries on the Laws of England:" born in Cheapside, London, July 10, 1723. In 1793, expired Brass Crosby, a patriotic lord mayor of London, who at the expiration of his mayoralty received the thanks of the corporation, and a cup of £400 value: born at Stockton-upon-Tees, in Durham, in 1725. In 1797, Sir John Jervis (afterwards Earl St. Vincent) obtained a signal victory over the Spanish fleet, off Cape St. Vincent, Portugal. In 1818, a cotton manufactory at Colnbridge, near Huddersfield, occupied by Mr. T. Atkinson, caught fire, and was entirely destroyed; 17 girls, the oldest about 19 years of age, were burnt to death, only 9 persons escaping.

VALLE CRUCIS Abbey, Denbighshire, built 1200.

VALENTIO, Father, so styled, was an English friar, a native of Yorkshire, whose name was Matthew Atkinson, called in religion Father Paul of St. Francis. Under the penal statute, 11th and 12th of William III., he was condemned to perpetual imprisonment, in the latter end of the 17th century, for

having exercised the functions of an ecclesiastic of the church of Rome, on the information of his maid-servant, who received the reward, stipulated by the statute, of £100, for betraying her master. Pursuant to his sentence he was conveyed to Hurst castle, and there confined for life. This statute was passed in the reign of a monarch who is said to have established civil and religious liberty in England! This prisoner for worshipping God according to the custom of his fathers, had, as a great indulgence, the privilege of walking on the adjoining strand, by the warden of the place, by whom he was much respected, and to whom he rendered himself useful, by teaching his children Latin; but certain strangers who happened to visit the castle took offence at this indulgence, which was the occasion of Mr. Atkinson's voluntarily confining himself ever afterwards to his own miserable apartment. Here he was so resigned and contented, as to persist in refusing the offers made by powerful friends to procure his enlargement. He was buried in the Roman Catholic burying-ground contiguous to Winchester. The epitaph on Mr. Atkinson, inscribed on his headstone in St. James's churchyard, Winchester, is as follows:—

H. S. E. R. P.

Paulus Atkinson, Franciscanus, qui 15th Oct., 1729, ætat. 74, in castro de Hurst, vitam finivit, postquam ibidem 30 peregerat annos.

It is said—and, it must be hoped, truly—that he was the last sufferer under the infamous statutes of William and Mary against religious liberty, no matter what creed applied against.

VALENTINIANS, the followers of a priest called Valentine, who, losing a bishopric, felt so disappointed that he founded a specious idolatrous system of faith of his own, 200. He published a gospel and psalms.

Some of his followers declared for, others against, baptism.

VALET, the term given to the king's eldest son; hence the valet or knave, synonymous terms, follow the king and queen in the pack of cards.

VALTELINE, in Switzerland, celebrated for the massacre of the Valteline, or of the Protestants, by the Catholics, July 20, 1620; for three days neither man, woman, nor child was spared.

VANDALS began their ravages in Germany and Gaul, 406-414; took Carthage, Oct. 24, 439; overran a large part of Europe with pillage and murder in the early ages of the Christian era.

VAN Dieman's Land, discovered by Tasman, 1633; visited by Furneaux, 1773; by Cook, 1777; deemed the south-east part of New Holland until the Straits of Bass were discovered; Hobart Town, the seat of government, settled on the river Derwent, 1804. Since that time, or in half a century, to Dec. 21, 1851, its white population increased to 70,130; in 1840, it contained 40,000 souls. In the last-mentioned year—and it has vastly increased since—the increased soil in cultivation was from 25,000 to 124,000 acres; the shipping, from one vessel of 41 tons to 141 vessels containing 12,491 tons; the imports from £62,000 to near a million; the exports from £14,500 to £867,000, of which more than a quarter were of wool; the revenue from £17,000 to near £119,000; and, in addition to these vast improvements, a sum little

short of £219,000 was invested in the purchase of Crown lands.

VANE, Sir Henry, the younger, beheaded by Charles II., 1662.

VANISI, burned under pretence of heresy and deism, at Toulouse, 1619, aged 33.

VARENNES, in France, the place where Louis XVI. was arrested on the 21st of June, 1791, and taken back to Paris, while endeavouring to pass the frontiers of France and join the Austrians and Prussians.

VARNA, Battles of, between the Russians and Turks, Aug. 5, 1828; after several attacks made by the Turks, which were repulsed, the city surrendered, Oct. 1, 1828.

VASCO de Gama discovers the East Indies by Cape of Good Hope, 1529.

VASSALAGE, or Villanage, the slavery that existed under the Saxons and Normans. Of those under the Normans, there were the free and the vassal serfs—the last sold with the land, the former free to labour for whom they pleased. Abolished in England, *temp.* Elizabeth; in Hungary, 1785; in Holstein, May, 1797; and in Courland, Sept. 1812.

VATICAN Library, founded 1448; palace of, at Rome, the residence of the pope, said to contain 7000 rooms.

VAUXHALL Gardens, London, opened 1738; in 1752, became the property of Tyers; in 1823, 133,279 persons visited these gardens. They were sold, Sept. 9, 1841, for £20,200, but are still open in the summer season.

VAUXHALL Bridge, built by Ren- nie and Walker, May 9, 1811, completed, 1816; it consists of 9 equal arches, and cost £150,000.

VEGETABLES originally imported from the Netherlands, 1509. There were then no kitchen-gardens in England; sugar was eaten with meat, to correct its putrescency, before they were introduced.

VEINS, the lacteal, discovered by Asellius, 1640.

VELLORE, India, revolt and massacre of the sepoy at, July 10, 1806; most of the insurgents put to the sword by Colonel Gillespie, but 800 sepoy fell before the mutiny was subdued.

VELOCIPEDES, a species of carriage, impelled by the rider in them, now gone out of use; invented 1818.

VENABLES' Expedition to America, Dec. 4, 1654.

VENEREAL Disease, of uncertain origin; reported to have first broken out in the French army, before Naples, 1494, when the term *Mal de Naples*; in England and the Netherlands called the *Mal de France*; yet in the latter country it is said to have been known so early as the 12th century; about the same period, too, at Florence, one of the Medici family died of it. Some imagine it was brought by Columbus from the new world, in 1493; there are grounds for believing it was known to the Jews, Greeks, and Romans, long before America was discovered.

VENETIANO, Dom., artist of Venice, who introduced the use of oil colours, there assassinated, 1476.

VENETIAN Horses, five in number, said to have been executed by Lysippus; they were first on the Temple of the Sun at Corinth, and, in the first year of the Christian era, Augustus Caesar paid the weight of them in gold, the price he offered for every statue of this sculptor; Nero placed them on a triumphal arch, and 300 years afterwards Constantine placed them in the Hippodrome; in the 12th century the Venetians took Constantinople and these horses, and placed them on the façade of the church of St. Mark, where they remained for 600 years, until Napoleon, in 1805, brought them to Paris, and placed them on the triumphal arch in the Place Carrousel; from thence they were taken by the allied forces and returned to Venice, 1814.

VENEZUELAN, The, declare in congress the sovereignty of the people, July, 1814; separated themselves from the federal union, and declared themselves alone and independent, 1830; their country of Venezuela was settled by the Spaniards, 1499.

VENICE; the first inhabitants of this country were the Veneti; conquered by the Gauls, and made a kingdom about 356; conquered for the Romans by Marcellus, 221 B.C. — The islands on which the city stands began to be inhabited by Italians about 421; the first house was erected on the morass by Entinopus, who fled from the Goths; the people of Padua took refuge there also, and were assisted by Entinopus in building the eighty houses which formed the first city, 413; first governed by a doge, 697; but its republic was not independent till 803; reduced to ashes, 1101; bank of, founded 1157; nearly destroyed by the league of Cambray, 1509; the arsenal was destroyed by fire, 1565; the conspiracy on which Otway's play is founded, 1618; its university founded, 1592; declared a free port, May 11, 1736; greatly damaged by fire, 1789; its senate dissolved, and its government

changed by the French troops, in 1797; the doge omitted the ceremony of wedding the Adriatic sea, a ceremony that had existed from 1173.—The French ceded the city, with the adjacent country, to the Emperor of Germany, Oct. 17, 1797; annexed to the kingdom of Italy, 1805; annexed to Austria, 1814.

VENTILATORS invented by the Rev. Dr. Hales, 1740; various improvements by Triewald, Chabonne, Reid, and others, in 1741, 1819, and following years.

WAGES in England.—The wages of sundry workmen were first fixed by act of parliament, 25 Edw. III., 1350. Haymakers had but one penny a day. Master carpenters, masons, tylers, and other coverers of houses, had not more than 3d. per day (about 9d. of our money); and their servants, 1½d.—*Viner's Statutes*. By the 23rd Henry VI., 1444, the wages of a bailiff of husbandry was 23s. 4d. per annum, and clothing of the price of 5s., with meat and drink; chief hind, carter, or shepherd, 20s., clothing, 4s.; common servant of husbandry, 15s., clothing, 40d.; woman-servant, 10s., clothing, 4s. By the 11th Henry VII., 1495, there was a like rate of wages, only with a little advance; as, for instance, a free mason, master carpenter, rough mason, bricklayer, master tyler, plumber, glazier, carver, or joiner, was allowed from Easter to Michaelmas to take 6d. a day, without meat and drink; or with meat and drink, 4d.; from Michaelmas to Easter, to abate 1d. A master having under him six men, was allowed one penny per day extra. The following were the rates of wages of harvest-men in England at the different periods stated:—

WAGGONS and Carts taxed, 1783.

WAGHORN's overland route to India; a lieutenant in the navy, who with unflagging zeal devoted himself to shorten the distance of the mails between India and England: he arrived in England Oct. 31, 1845, with the Bombay mail of the 1st of that month; he reached Suez on the 19th, Alexandria on the 20th, and passing rapidly through Austria, Baden, Bavaria, Prussia, and Belgium, he reached London at half-past four in the morning of the 31st. The ordinary mail reached

London, via Marseilles, Nov. 2; he declared he would yet bring the mail from Bombay in twenty-one days, but death cut short his honest endeavours, Jan. 8, 1850.

WAGRAM, Battle of, between Napoleon and the Austrians, when the latter were utterly routed; the combat was most sanguinary, and the French made 20,000 prisoners, the Austrians taking refuge in Moravia, July 5, 1809. On Oct. 24, a treaty of peace was signed, of the most humiliating character to Austria, who ceded to France all her

sea-coast territory, and a portion of the Austrian robberies from Poland.

WATTHMAN, Alderman, a column erected to his memory at the south end of Farringdon-street, 1833.

WAKEFIELD, Battle of, between Queen Margaret, wife of Henry II., and the Duke of York, in which the latter was killed, and 3000 of the Yorkists fell, Dec. 31, 1460.

WAKEFIELD convicted of carrying off Miss Turner, March 28, 1827.

WALBROOK, or St. Stephen's Church, London, the masterpiece of Sir Christopher Wren, finished 1679; the walls include an area of only 82 feet, by 59, and 34 high; its area is 5641 superficial feet, yet its supports occupy only 819, the latter being to the former as 0.145; the exterior is quite plain; there were churches preceding the present upon this spot, the first built in 1135; a second 1423, and a third, begun 1672, constitutes the present edifice.

WALCHEREN Expedition, 1809, one of those unfortunate military attacks upon an active enemy, then too frequently displaying ministerial incapacity; being nearly 40,000 men, with 35 sail of the line, the force was fully adequate to the object in view, had it been commanded by an officer of the least ability or experience. The Earl of Chatham, known only for his gambling propensities, was appointed to the command; the French knew its destination was the Scheldt. Instead of masking Walcheren, and pushing on to the destruction of the naval docks and basins at Antwerp, the army was set down in the pestilential marches of Walcheren, before Flushing, in the autumn season, when they were most fatal. Though the fever of the place was well known, and that wine and bark were the only remedies, the army was unprovided with either; the force came before Flushing in August, and after an able and protracted resistance the town was captured, and on the 23rd of December, 1809,

evacuated, with a noble army decimated and ruined. An inquiry was instituted by the House of Commons; but as the power of the ministry was absolute over the House, nothing came of the shameless incapacity displayed, but what the country expected from so vicious a direction of a very noble force; no remonstrances of the admiral could influence the military commander to common-sense action; more than half that fine army sank under the fever, or became invalidated for life.

WALDENSES, a religious sect that early showed a true sense of the impositions in doctrines of the papal church, and in consequence became the objects of its vindictive malignity; the Holy office, the Inquisition, was established to convince, by the stake and fagot, those unfortunate people of the fidelity of the Roman church to the professions it made, of being the only teachers of the divine principle, "Do as you would be done unto;" Innocent III. first ordered the new doctrine to be preached against, 1204; the Inquisition was established under Chateaufort; Simon de Montfort led the executioners, and the Waldenses and Albigenses were pursued with fire and sword until their country was made a desert; the first inquisitor-general was Dominic de Guzman, 1208.

WALES, the country to which the remnant of the ancient Britons principally retired after the Romans left England, for some took refuge in Cornwall, from whence a part crossed over into Brittany; in 447, the Britons, among the mountains of Wales, were able to resist their Saxon invaders, nor was the country brought under the English crown until the reign of Henry II., 1157, when that monarch subdued South Wales; in 1282, Edward I. conquered the entire country, then ruled by its last prince, Llewellyn; in 1284, the queen of Edward I. lay in of a prince at Caernarvon castle, who

was styled Prince of Wales; but the country was not formally incorporated with England until the reign of Henry VIII., 1535.		The invasion of the earl of Chester	1079

WARRINGTON, Lancashire, made a borough, 1832.

WARFARE of Christ, Order of, begun in White Russia, 1325; in Poland, 1705.

WARS, often felonies privileged to princes by the people. The war of 1702 was a war, not for self-defence, but for the sake of fighting. It cost us sixty-two-millions of money. In it we won five battles and lost only one, and we gained Gibraltar, Minorca, Nova Scotia, Newfoundland, and Hudson's Bay. The American war, waged to destroy the liberties of men of our own kindred, cost one hundred and thirty-six millions sterling; it was one series of disgraces. The great war of the French revolution cost us the enormous sum of four hundred and sixty-four millions; spent to maintain a rotten despotism against the rights of the people, to restore the imbecile Bourbons, and—we gained Malta alone. We made a peace speedily broken, and we took up arms against Napoleon; it cost no less than eleven hundred and fifty-nine millions sterling! We won. What conquests rewarded our extravagance? Tobago, the Honduras, Demerara, and the Mauritius. These are irrespective of our Eastern conquests, the cost of which is beyond calculation. From the year 1702 to the year 1814, we waged four great wars in Europe and America, besides a host of little wars by way of interludes, and a gigantic war during almost the whole period in Asia. These four wars cost us altogether eighteen hundred and twenty-one millions of pounds sterling: and adding the cost of the little wars, we are within the mark if we estimate the whole cost of war during a single century, or little more than the life of a man, at two thousand millions!

Wars with Spain, between 1589 and 1593, cost Queen Elizabeth £1,300,000, besides the double subsidy of £280,000 granted by parliament. In the Irish rebellion she spent £3,400,000 in ten years. No less than 316 years of peace are now required to cancel the debt of 24 years of war, at the rate of expense incurred during the last hostilities.

WARSAW, the Diet transferred to, 1566; surrendered to Charles XII., 1703; the Russian garrison placed there by Catherine driven out by the citizens, April 17, 1794, with the loss of 36 cannon, 2000 killed, and 500 wounded; besieged by the king of Prussia, July, 1794, but he was compelled to retire; taken by the Russians, made a duchy, and annexed to Saxony, August, 1807; taken by the Russians, 1813, ruled by a Russian viceroy; the Polish revolution commenced at, Nov. 29, 1830; battles connected with the city, Oct. 10 and 12, 1794; the Poles defeated by Catherine's butcher of Ismael, Suwarrow, and 30,000 of all ages murdered by him in cold blood, Nov. 8, 1794; in the battle before this inhuman massacre 10,000 Poles were killed, and the same number made prisoners; the battle of Grochow, in which the Russians were defeated, losing 7000 men, Feb. 20, 1831; battle of Warsaw, when the city capitulated after two days' combat with the Russians, the last battle for Polish freedom, Sept. 7 and 8, 1831.

WARWICK, Earl of, the king-maker, defeated and slain at the battle of Barnet, April 14, 1471.

WARWICK. Mail robbed of £20,000 in bank-notes, while it stood before Furnival's inn, Holborn, Nov. 21, 1827.

WARWICK injured extensively by a fire, Sept. 8, 1694.

WARWICK Castle, built 912; rebuilt 1072.

WASHINGTON, G. General, born 1732, died Dec. 14, 1799.

WASHINGTON, North America, founded 1791, made the seat of government, 1800; the congress met there for the first time, May 30, 1808; taken by the English under General Ross, and the archives and library, as well as the public buildings, shamefully destroyed, Aug. 24, 1814.

WASTE Lands in Great Britain, by examination in 1794, were found to be 22,351,000 acres; which, if cultivated and enclosed, reckoning an annual increase of 9s. per acre, the annual rent would amount to £10,957,950; and, on a supposition that the yearly produce would be £1, 7s. per acre, or three rents, it would be worth £30,073,850 per annum to the community.

WATCHES invented at Nurem-burgh, in Germany, 1477; first used in astronomical observations, 1500.—The Emperor Charles V. was the first who had any thing that might be called a watch, though some call it a small table clock, 1530.—Watches first brought to England from Germany, 1597; spring pocket ones invented by Hooke, 1658.—Repeating watches by Barlowe, 1676; Harrison's improvement, 1739, 1749, 1753; in 1759 he made his celebrated time-piece which gained him £20,000, the reward offered by the Board of longitude, 1763.

WATCHES and Clocks taxed, 1797; repealed, 1798.

WATCH, none by night in London, 1189.

WATCH by night for the city of London first appointed, 1268.

WATER Spout burst on the Clidagh mountains, county Kerry, Ireland, by which a large district was torn up, and nine persons lost, Aug. 4, 1831.

WATER sold in the West Indies

for one shilling a pailful, 1731; sold in the streets of Exeter, 1785.

WATER mixed with wine in the sacrament, first introduced, 122.

WEEKLY Bills of Mortality began in London, 1603.

WEDGWOOD Ware, improved by Josiah Wedgwood of Staffordshire, 1762: 10,000 families at present employed in that county on this ware.

WEIGHTS and Measures invented eight centuries before the Christian era: in England, fixed 1297; standards previously provided for the whole country by the sheriffs of London, 1167; a committee of the Commons appointed, 1790, to investigate the measure, but nothing was done; in 1814, a second committee appointed; again in 1818; a bill introduced, 1823, and passed the Commons, but not the Lords; in 1824, an act regulating the weights and measures was passed, June 17; in 1826, the equalization took place, and new acts relating to, were passed in 1835; the imperial gallon was substituted for the old gallon of wine of 231 cubic inches; the ale and beer of 282, the corn gallon of 268½, and the Scotch pint of 103½ cubic inches; the new gallon was declared to contain ten pounds of distilled water, avoirdupoise, weighed in air, at a temperature of 62 degrees Fahrenheit, the barometer being at 30 inches; the contents of the new gallon are found, therefore, to be 277·274 cubic inches, or rather more.

WELL, the celebrated Artesian, was commenced at Grenelle, near Paris, Jan. 1, 1834, and completed after seven years' labour: the water flowed in a great quantity, of a temperature of about 25 degrees (80 to 86 Fah.) The total depth about 1795 feet. The borer fell into the cavity when the perforation had been made to the depth of 115 metres—377 feet. This was soon recovered, and was nothing to what occurred in 1837. Then the length of the bars united together, measured 1260 feet. Not only these broke, but the enormous metal spoon used to bring the materials to the surface, also fell to the bottom of the cavity, from a height of 262 feet, and it required extraordinary exertions to recover it. This operation, which could only be worked with horse-power, occupied from May 1837, to August 1838. The immensity of this labour, for fifteen successive months, may be conceived, as the instrument had to act at a depth of 1500 feet. The works were continued without any fresh misfortune until April 8, 1840, when another part of the borer fell from a considerable height, with such force that it penetrated the chalk below to the depth of 85 feet. A fourth accident occurred shortly before the successful termination, when the metal spoon again fell to the bottom of the bore, having nearly attained its extreme depth. It was put on one side by forcing it horizontally into the earth, so as not to obstruct the passage. This great work cost about 170,000 francs.

WELLINGBOROUGH, Northamptonshire, burned, Aug. 14, 1831; again, July 28, 1738, when 300 houses were destroyed.

WELLINGTON, Duke of, born May 1, 1769; administration of, commenced May 1828, terminated Nov. 1830; died Sept. 14, 1852; buried in St. Paul's, Nov. 18.

WELLINGTON, the ship, Duchess of, took fire in Sanger Roads, when

the pilot, two officers, two passengers, and many of the crew perished in the flames, Jan. 27, 1816.

WESLEYAN Methodists, one of the two branches of the original union of Wesley and Whitfield, who separated on account of differences on certain points of doctrine, and each party followed its leader; Wesley, in 1730, with a few fellow-students, formed themselves into a society for the purpose of mutual edification in religious exercises. Among other names bestowed upon the members, that of Methodists was applied to them. Wesley went to Georgia in America, in 1735, with a view of converting the Indians. On his return to England, he commenced itinerant preacher, and gathered many followers; but the churches being shut against him, he built spacious meeting-houses in London, Bristol, and other places. Wesley was indefatigable in his labours, and almost continually engaged in travelling over England, Wales, Scotland, and Ireland. His

society was well organized; and he preserved his influence over it to the last. He died in London in 1791. At the conference in 1849, several Wesleyan ministers were expelled, in consequence of their advocating reform in the body, and the suspected publication of the celebrated Fly Leaves. Since that time the discontent has become greater, and the ministers have agitated in various parts of the country, with considerable success, against one or two domineering leaders. From the minutes of the last conference, it appears that the number of members in the society was as follows:—under the care of the British and Irish conferences, 428,729; namely, in Great Britain, 323,178; in Ireland, 27,047; in foreign stations, 78,504; under the care of the Wesleyan Methodist church in Upper Canada, in 1840, 16,354; under the care of the American conferences, in 1828, the date of the last returns, 692,341; total number of members, 1,137,424. The number of preachers, regular and supernumerary, was, in Great

Britain, 1078; in Ireland (including 23 missionaries), 159; in the foreign stations (including assistant missionaries), 345; in Upper Canada, 127; in the American connection, 3322; total number of ministers, 5031. Grand total of members and ministers throughout the world, 1,142,455.

West Indies, the name given to the chain of islands in the concavity between the Floridas on the north, and the mouth of the Orinoco, on the southern mainland of the American continent; St. Salvador, in the Bahamas, being the first land made by Columbus, 1492. the total of all kinds of grain and meal brought into England from Ireland in the largest year of its importation was, in 1845, 3,251,901 quarters, which number fell in 1847 to 963,779 quarters, after which year it began again to increase.

WHEAT was first imported into England, 1347; different acts were

passed in regard to importation and exportation, but always passed with a view to support rents through the influence of the landholders, and the people of England were compelled to pay high prices before importation was permitted; in July 15, 1828, wheat was only allowed to be imported whenever the average price for all England was under 62s., on paying a duty of £1:5:8 per quarter; from 62s. to 63s., £1:4:8 per quarter, and this gradually reduced to 1s. when the average price was 73s.,—this was called the sliding scale; a second of the same name was enacted, April 29, 1842. At length the free trade bill in corn passed, June 26, 1846; in 1745, no less than 300,000 quarters of wheat were exported so long as the home price did not exceed 48s. per quarter, with a bounty of 5s. With a triple population, the necessity for enlarged importation being greater, the price was artificially sustained. Imported since the act permitting a free trade in corn:—

The total amounts to 4,241,474 quarters; deducting an average exportation of 5000 quarters annually for Galicia, would leave 4,126,474 quarters; which, divided between Poland and the Russian provinces, in

the proportion of 3 to 2, would give 2,475,884 quarters for Poland, and 1,650,590 for the Russian provinces. The average annual exportation of wheat from Poland by the way of Dantzic, is therefore about 107,647 quarters.

WHEEL, an instrument of refined torture, used first to protract the sufferings of those who were put to death by the Romish church. Francis I. of France ordered the example to be followed upon robbers. The wheel was placed horizontally upon an upright post which was fixed into the nave; the sufferer was tied to the spokes, with his legs and arms extended in the way of a St. Andrew's cross; the bones of his legs and arms were then broken with an iron bar, and he was left to expire in agony, 1515. Duty on carriage-wheels, 1747, 1776.

WHIG, *see* also Tory. These names, some persons assert, arose at the time of the Meal-tub plot, given to one of two parties who believed, or affected to believe, the truth of the plot, the others being of an opposite opinion, 1679; still the origin seems uncertain. Others state that Whig, in 1680, was a name of reproach given by the court party to their antagonists for resembling the principles of the Whigs, or fanatical conventiclers in Scotland; and the other was given by the country party to that of the court, comparing them to the Tories, or popish robbers in Ireland. They formerly were called Whigs from Whiggamors, a name given to the Scots in the south-west, who for want of corn in that quarter used annually to repair to Leith, to buy stores that came from the north, and all that drove were called Whiggamors or Whiggs, from the term Whiggam, which they used in driving their horses. Now, in the year 1638, the Presbyterian ministers incited an insurrection against the court, and marched with the people to Edinburgh; this was called "the Whiggamor's in."

road," and after this all that opposed administration in Scotland were called Whigs, and from hence the term was adopted in England. Whig and Tory originated in 1649; the parties were at their greatest height, 1704

WHIG Club, established by Chas. James Fox. The next distinguished member was Francis, Duke of Bedford, who died 1802.

WHIG Club, Ireland, styled the Northern Whig Club, 1794. The original members:—Lord Charlemont, Lord de Clifford, Lord Moira, Archibald Hamilton Rowan, Hon. Robert Stewart (Lord Castlereagh), William Todd Jones, Hon. E. Ward, Hon. R. Ward, Hon. H. Rowley, Rt. Hon. John O'Neill (afterwards Lord O'Neill), Right Hon. H. L. Rowley, Eldred Pottinger, William Brownlow, Savage Hall, William Sharman, John Forbes, Richard J. Ker, E. J. Agnew. One member of this society was that Lord Castlereagh who subsequently carried the Irish Union, and betrayed his friends to the Tory minister. Lord Castlereagh often drunk the following toasts:—"President Washington, and the United States of America," "A happy establishment to the Gallic constitution," "Freedom to the Brabantes;" and last, though not least, "The sovereignty of the people,"—that people whose cause he spent his subsequent life in continually opposing.

WHIG and Tory Peers. From the accession of George III. to 1831, Tory ministers had been 64 years in power, and created 195 peers, entertaining similar political opinions; during the remaining 13 years the government of the country had been in the hands of Whig ministers, by whom 69 Whig peers were created, leaving a balance in favour of the Tories of 126.

WHIRLWIND, a violent, at Falmouth, which stripped the roof off every house in its way, tore up several trees, and threw a vessel lying in the harbour on her beam

ends, so that her keel appeared in sight, 1st Jan. 1803. A violent one near Cirencester, 6th July, 1809. A dreadful one at Fernal Heath, Worcestershire, its width from half a mile to a mile, by which much damage was done, and in one farm 200 trees torn up by the roots, Sept. 22, 1810. At Bonsell, in the Peak of Derbyshire, accompanied with a tremendous hail-storm, 12th May, 1811. At Plas-yollen, Shropshire, by which many trees were torn up and carried to a great distance, 25th May, 1811.

WHITBY Monastery, founded 1075.

WHITE BOYS, or Levellers, in Ireland a faction that committed great excesses in Ireland, originating 1761; they wore their shirts outside their dresses, whence their name. Many of the ringleaders were executed, 1762.

WHITE Friars, an order of the Carmelite mendicants, one monastery of which order was established near the Temple, in London, west of Blackfriars, and founded there, 1245.

WHITEHALL, London, built by Hubert de Burgh about the commencement of the 13th century. It came subsequently into the hands of the Archbishop of York, and was purchased from Cardinal Wolsey by Henry VIII., when it became a residence of the sovereigns of England. In 1697 the whole, except the banqueting-house, built by Inigo Jones in 1619, was consumed. In front of this remnant of the palace Charles I. lost his head, Jan. 30. 1649. The banqueting-house was converted into a chapel by George I., 1723; repaired 1829-30.

WHITECROSS Street Prison for debtors, begun July 5, 1813.

WHITEHALL Preachers first appointed by the universities, 1724.

WHITE Plains, Battle of, between the English and the Americans, in which the latter were defeated, Nov. 30, 1796.

WHITE Rose, the symbol of the house of York, in opposition to the

Red, adopted by the house of Lancaster between 1455 and 1471.

WHITE Tower, London. The keep of the Tower of London, erected 1070 by Gundulph, bishop of Rochester, 116 feet long by 96 wide and 92 high; the walls are 11 feet in thickness, and contain winding staircases to the summit: the north-east turret was once used as an observatory.

WHITTINGTON, Sir Richard, who served the office of lord mayor three times, about 1419. He was a great benefactor to the city, but no reliance can be placed upon the tales respecting his history. He founded a college, 1424, and almshouses near Highgate-hill, 1429.

WHITSUNTIDE Festival, instituted 813.

WHITTY, the Rev. Mr., murdered at Golden, Tipperary, Ireland, July 25, 1832.

WHORWELL Monastery, built 979.

WICKLIFFITES, the followers of Wickliffe, the parent of the English Reformation, 1377. He was protected by the brother of John of Gaunt, when persecuted by the church, from whose murderous intentions he was only preserved by an attack of paralysis, in his 60th year, Dec. 31, 1384.

WIDOWERS taxed in England, 1695; a duke, £12, 10s.; lower peerage ranks, less; commoners, 1s.

WIDOWS, societies for the relief of, in England, are numerous. One for musicians' widows, begun 1738; for those of medical men, 1788; of naval men, 1739; of lawyers, 1817; of artists, 1827.

WIGAN, Battle of, between the Earl of Derby for the king, and Sir John Smeaton. The earl defeated, 1643; again defeated by Colonel Ashton, who razed the fortifications; again by Colonel Lilburn, when Sir Thomas Tildesley was slain, 1651; a monument erected to his memory, 1679.

WIGHT, Isle of, taken by the Danes, 787; again, 1001; by the French, July 13, 1377; alienated

by Henry VI. to Henry de Beauchamp, 1442.

WIGMORE Castle, Herefordshire, built 1074.

WIGS, full-bottomed, first worn by English judges, 1674.

WILKES's number of the North Briton (the 45th), April 23, 1743, for which the Earl of Halifax issued a general warrant against him: by that illegal act he obtained £1000 damages against the government. He was outlawed for being the author of a libel and of an immoral work, being expelled the House of Commons; yet he was again elected for Middlesex, 1774, and the same year served the office of lord mayor. He died 1797.

WILLIAM, Prince, eldest son of Henry I., with his newly-married bride, daughter to the Earl of Anjou, Richard and Mary, two other of the king's children, and 180 of the nobility, shipwrecked and lost, in coming from Normandy, in the year 1120.

WILLIAMSBURG, South Carolina, damaged by a storm, July 17, 1753.

WILLIAM III. landed in Tobay, Devon, Nov. 4, 1688; called to the throne by parliament, Feb. 13, 1689; crowned with his queen, Mary II., April 11, 1689.

WILLIAM and Mary packet, between Bristol and Waterford, struck on the Wolvers, three miles northwest from the Holmes lighthouse, and went down in fifteen minutes afterwards, with 60 persons, 50 of whom were passengers; 9 persons only were saved, Oct. 24, 1817.

WILLS, the privilege of making, granted by Henry I., 1100, but with various safeguards, lest the feudal system should sustain detriment: these were taken away by the statute 32 Henry VIII., 1541. The will of Edward the Confessor, the earliest on record, 1066. As a specimen of a will of that most remarkable individual, Napoleon I., Emperor of France, who died May 5, 1821, eleven days after making it, the following extracts are applicable:—

"This day, April 24, 1821, at Longwood, in the Island of St. Helena. This is my testament, or act of my last will:—I leave to the comte de Montlolon 2,000,000 francs, as a proof of my satisfaction for the attentions he has paid to me for these six years, and to indemnify him for the losses which my residence in St. Helena have occasioned him. I leave to the comte Bertrand 500,000 francs. I leave to Marchand, my first valet-de-chambre, 400,000 francs: the services he has performed for me are those of a friend. I desire that he may marry a widow, sister, or daughter of an officer or soldier of my old guard. To Saint Denis 100,000 francs. To Novarre 100,000 francs. To Pijeron 100,000 francs. To Archambaud 50,000 francs. To Cuvier 50,000 francs. To Chandelle, *idem*. To the abbé Visnale 100,000 francs. I desire that he may build his house near Ponte Novo de Rossino. To the comte Las Cases 100,000 francs. To comte Lavalette 100,000 francs. To the surgeon in chief, Larrey, 100,000; he is the most virtuous man I have known. To general Lefevre Desnouettes, 100,000 francs. To general Drouet, 100,000 francs. To general Cambronne, 100,000 francs. To the children of general Muton Duvernals, 100,000 francs. To the children of the brave Labédoyère, 100,000 francs. To the children of general Girard, killed at Ligny, 100,000 francs. To the children of general Chartrau, 100,000 francs. To the children of the virtuous general Travost, 100,000 francs. To general Lallemand, the elder, 100,000 francs. To general Clausel, 100,000 francs. To Costa Bastilica, also 100,000 francs. To the baron de Meneville, 100,000 francs. To Arnault, author of *Marius*, 100,000 francs. To colonel Marbot, 100,000 francs: I request him to continue to write for the defence and glory of the French armies, and to confound the calumniators and the apostates. To the

baron Bignon, 100,000 francs; I request him to write the history of French Diplomacy from 1792 to 1815. To Poggi de Talaro, 100,000 francs. To the surgeon Enmiery, 100,000 francs. These sums shall be taken from the six millions which I deposited on leaving Paris in 1815, and from the interest, at the rate of 5 *per cent.* since July 1815; the account of which shall be adjusted with the bankers by the counts Montholon and Bertrand, and by Marchand. These legacies, in the case of death, shall be paid to the widows and children, and in their default, shall revert to the capital. I institute the counts Montholon, Bertrand, and Marchand my testamentary executors. This present testament, written entirely by my own hand, is signed and sealed with my arms.

"NAPOLEON.

"April 24, 1821, Longwood."

The following is a codicil to the same will, of which the foregoing is an extract:—

"On the liquidation of my civil list of Italy—such as money, jewels, plate, linen, coffers, caskets, of which the viceroy is the depository, and which belong to me, I dispose of two millions, which I leave to my most faithful servants. I hope that, without their showing any cause, my son Eugene Napoleon will discharge them faithfully. He cannot forget the forty millions which I have given him in Italy, or by the right (parage) of his mother's inheritance. From the funds remitted in gold to the empress Maria Louisa, my very dear and well-beloved spouse, at Orleans, in 1814, there remain due to me two millions, which I dispose of by the present codicil, in order to recompense my most faithful servants, whom I beside recommend to the protection of my dear Maria Louisa. I leave 200,000 francs to count Montholon, 100,000 francs of which he shall pay into the chest of the treasurer (Las Cases) for the same purpose as the above, to be

employed according to my dispositions, in legacies of conscience."

LETTER TO M. LAFITTE.

"MONSIEUR LAFITTE—I remitted to you in 1815, at the moment of my departure from Paris, a sum of nearly six millions, for which you gave me a double receipt. I have cancelled one of these receipts, and I have charged comte de Montholon to present to you the other receipt, in order that you may, after my death, deliver to him the said sum, with interest at the rate of five per cent., from the 1st of July, 1815, deducting the payments with which you have been charged in virtue of my order. I have also remitted to you a box containing my medallion. I beg you will deliver it to comte Montholon. This letter having no other object, I pray God, Monsieur Lafitte, that he may have you in his holy and worthy keeping.

WILD, Jonathan, hanged, June 15, 1725.

WILLIAMS, Bishop, fined £10,000; again, £8,000 for libelling the privy council, July, 1637.

WILMINGTON, Earl of, his administration as first lord of the treasury, Feb., 1742; he was succeeded by Mr. Pelham, who in Nov. 1744 formed the Broad-bottom administration.

WILMOT, Lord, arrested Aug. 18, 1644; escaped beyond the sea after the battle of Worcester, 1651.

WILSON, Samuel, of London, bequeathed £20,000 to be lent out in small sums to tradesmen, 1771.

WILTON, near Great Redwin, greatly damaged by fire, Dec. 5, 1759.

WIMBLEDON, Surrey, the seat of Earl Spencer, burned down, March 21, 1785.

WINCHELSIA, Old Town of, swallowed up by the sea, 1250; the present not older than the time of Edward I.; Greyfriars' monastery at, built before the reign of Edward

III.; the castle of, built by Henry VIII., chartered, 1543.

WINCHCOMB, Gloucestershire, Monastery of, burnt, 800.

WINCHESTER, Cathedral of, built on the site of one preceding, it became ruinous between 1079 and 1366; dedicated in succession to three saints; St. Swithun was once a bishop here; St. Birine was bishop, 636. It has given ten saints and two cardinals to Rome; the style of the edifice is part Saxon and part Gothic, and was altered and completed by William of Wykeham, 1405; it is 554 feet long, and 78 high; the bishopric is of great antiquity, and has never changed the see since the first foundation. The bishops are chancellors of the see of Canterbury, and prelates of the most noble order of the garter; which office was vested in them by Edward III. at the first foundation of that noble order, and has continued with them ever since. They were reputed anciently to be earls of Southampton, and are so styled in the statutes of the garter made by Henry VIII. The bishops since the restoration of King Charles II. were:—1662, George Morley, Bishop of Worcester; 1684, Peter Mews, Bishop of Bath and Wells; 1707, Sir Jonathan Trelawny, bart., Bishop of Exeter; 1721, Charles Trimmell, Bishop of Norwich; 1723, Richard Willis, Bishop of Salisbury; 1734, Benjamin Hoadley, Bishop of Salisbury; 1761, John Thomas, Bishop of Salisbury; 1781, Hon. Brownlow North, Bishop of Worcester; 1820, George Tomline, Bishop of Lincoln; 1821, the palace sold for £6000.

WINCHESTER College, founded 1387.

WINDMILLS, first known in Spain, France, and Germany, 1209; wind saw-mills invented, 1633.

WINDSOR Castle, built by William I., enlarged by Henry I.; Edward III. re-erected nearly the whole under the control of William of Wykeham, and built St. George's Chapel; additions made to it by

Henry VIII.; Queen Elizabeth made the north terrace, and Charles II. repaired it, 1680; the chapel repaired and re-opened, Oct. 1790; the castle repaired and enlarged, 1824-8, and George IV. took possession of it, Dec. 8, 1848.

WINDS and Months, said to have been both named by Charlemagne, 788.

WINDOWS found in Pompeii, and glass said to have been used in the third century; glass imported and used in private houses, 1177; window tax enacted, Will. III., 1695; increased 1746, 1778, 1784, 1797, 1802, 1808, reduced 1823; originally established for 33 years only; produced in 1849, £1,893,988; repealed 1851, and a moderate house-tax substituted.

WINDHAM, Sir William, £1000 offered for his apprehension, Sept. 26, 1715; taken into custody, Oct. 3, 1715.

WINDHAM, Francis, presented with £1000 for his care of Charles II. after the battle of Worcester, 1660.

WINEFRED'S Well, Holywell, North Wales; mentioned in 660; it is a natural well, to which extraordinary virtues have been ascribed by popish superstition; St Winefred was the reputed niece of St. Bruno, who lived in the seventh century, and her martyrdom is commemorated annually, June 22, and her translation to heaven, Nov. 3. St. Bruno, her uncle, is said to have joined her head again so nicely to her body, that the saintess exhibited no marks of her decapitation.

WINE, the invention attributed to Noah by the Jews; Bacchus is said to have brought it from India to Greece, to whom the Hindoos give the name of Bala-Rama; the Armenians assert, that Noah before the deluge cultivated the vine outside the walls of Erivan; the Egyptians attribute the invention to Osiris, or the Sun; the Chinese ascribe the making of the first wine in their

country to their emperor Yu, or Ta-you, 2200 years before the Christian era; the wine of Helbon, made at Damascus, is mentioned by Ezekiel, 590 A.C.; known in the time of Richard III. as wine of Tyre, because it was exported by that place. Wine was produced in France in the time of the Romans; Martial condemned that of Marsillia (Marseilles) as being smoky, but that of Vienna on the Rhone (called Vienna) was much valued, though not so the Rhone wines in general; the wines of Tarragona, in Spain, now Tarracon, were said to approach Falernian in excellence; the French School of Medicine discussed the merits of the wines of Burgundy and Champagne in 1652, and settled them in favour of those of Champagne, 1778, almost the duration of a chancery-suit; in 1328, Rheims wine was cheaper than Beanne; in 1571, they had risen eight times beyond their old price; champagne reached its highest excellence of culture and estimation in 1610; in 1834, 14,190,000 bottles of champagne were made; the annual consumption of this wine in France, in 1836, was 626,000 bottles; England and the East Indies, 467,000; Germany, 479,000; Russia, 280,000; United States of America, 400,000; Sweden and Denmark, 30,000. Wine was early imported and made in England; the wines drunk in 1469, were malvoisie or malmsey, omaney, osey, bastard, or bastardo, muscadelles, and other sweet wines; Gascony and Guienne wine in 1535, was sold at 8d. the gallon; malmsey, sack, and sweet wines at 12d., and 1½d. the pint, under a penalty; none but those who could spend a hundred marks a year, or the son of a nobleman, were allowed to keep more than two gallons at a time in their houses, under a penalty of £10; no taverns were allowed to retail wine to be drunk in the houses; merchants might use the wine they imported for themselves, but were not

to sell it; high-sheriffs, magistrates of cities and towns, and the inhabitants of fortified towns, were alone allowed to keep tuns of wine for their own use; four pipes per month were consumed in some of the noblemen's houses in the time of Edward IV.; down nearly to the revolution of 1688, French wines were imported to the extent of 20,000 tuns per annum, or 436,380 gallons, while more than double the quantity had been imported before, the importation of these wines was as follows, for the years nam-

ed, 2078 tons were imported in 1800; in 1820, 1090 tuns; 1850, 1629; the total wines of all kinds imported in 1700, was 23,502 tuns; 1750, 15,456; 1800, 36,804; 1820, 23,904; 1840, 31,209; 1850, 30,230 tuns; the duties on wine were 2s. the tun in 1272, and the best imported came into the monasteries; one duty was called butlerage; in 1618, wine was 13d. the quart, a pint of muscadelle, 6d.; the eight-gallon rundlets of claret, 16s.; a pottle of canary of nine pints, 2s. 6d.; three quarts of sherry, 2s.

In 1840, a duty of 5 per cent additional was laid on, making the duty 5s. 9½d. per gallon, or 676 per cent. on the cost price of Lisbon, Bucellas, &c., at £5; and 44 per cent. on wine of £30 value; thus, one bottle, costing 3d. as imported, pays 1s. duty, together 1s. 3d., exclusive of profits in England and dock charges. Of 31,000 pipes of port wine, or rather wine and brandy, nearly a fourth being the product of the still mixed with that of the grape, 26,159 came to England direct, in a given year; 38 to Guernsey and Jersey; 132 to Newfoundland, and 197 to Quebec; a great many pipes find their way to England via Hamburg; foreigners who drink the pure juice of the grape have no relish for this Oporto wine. Wine was first made in England, 1140; it was never made north of Cambridge; doomsday book shows it was made in Essex, six acres producing 160 gallons; it was also made near Tewkesbury, and in the

whole vale of Gloucester; Worcester, Somerset, and Hereford have places yet bearing the name of vineyards; in 1200, William of Malmesbury states, that the vale of Gloucester made as good wine as many of the provinces of France. Rabelais, in 1433, alludes to the wines of Britain (not Bretagne.) Raleigh in Essex was valued at ten pounds, *propter vinas*, in king Edward's time; in 1150, the vines of Lincombe, near Bath, were confirmed to the abbey there; there has been a change of climate since, for M. Arago mentions the like alteration in parts of the north of France; where good wines were once made, none are made now, the more southern limit of the north-east winds in the first half of the year, it is probable, has wrought out this change.

WING of St. Michael, order of
knighthood, begun in Portugal
1172.

WINGFIELD Castle, Suffolk, built
before 1066.

WINSTER, Derbyshire, sixty people

WIRE invented in Nuremberg
1410, and mills erected for the
manufacture 1563; the first mills
for the purpose in England erected
at Mortlake 1663, some say at
Sheen adjoining, by a Dutchman.
Gold and silver wire are made of
great tenacity; 48 ounces of silver
may be gilt with one of gold, and
drawn into wire, of which two yards
only will weigh a grain; 8 grains
of gold will cover without a flaw a
silver wire of 13,000 feet long.

WIRTEMBERG made a county of
itself in 1078, a duchy at the diet
of Worms 1495, a kingdom 1806; in
1772 the Protestant duke turned
sides, and became a Catholic; the
Duke of Wirtemberg married the
Princess Royal of England, May 17,
1797; in 1802 and 1805 he
was made a king by Bonaparte,
and proclaimed Jan. 1, 1806; the
kingdom obtained a free constitu-
tion, 1819. This state, like most
other German ones, has been repeat-
edly oppressed by Austria; Charles

V. turned the duke Ulrich out of
his dominions in 1519, and seized
upon them himself; he was restored
in 1534 by the assistance of France
and Hesse-cassel.

WITCHCRAFT, this pretended crime
the church of Rome vindictively
punished; every species of punish-
ment was applied, first under the
auspices of this church, and then of
the reformed churches, to the victims
of a most abominable persecution.
It is said that the first statute
against them was in the reign of
Henry VIII., the persecution even
increased with the reformation,
that should have put it down. The
33 of Henry 1541, and the 5th of
Elizabeth 1562, pronounced it fel-
ony; and James I., in the catalogue
of his other vices, added that of
stimulating such persecutions; his
book called "Dialogues on Demon-
ology" is well worthy of such a
king, the act passed in consequence,
1601; the murders committed under
this charge in England in 200 years,
are said to have been 30,000; the
martyrdom of Joan d'Arc was a
specimen of the ignorant bigotry
of the English in the year 1431.
Sir Matthew Hale, a political sneak,
but a most excellent lawyer if
crediting witchcraft be proof of it,
condemned two poor women to the
stake for witchcraft, who were
burned, 1664; on the lawyer's argu-
ment, that there must be witches,
because there were acts of parlia-
ment to punish them, Jane Wen-
ham was found guilty at Hertford
in 1712, against the charge of the
judge who tried her, and who pro-
cured her a pardon; she was com-
mitted by a stupid justice to Hert-
ford jail on the charge of conversing
with the devil in the shape of a
cat, and making a maid that could
not walk leap over a five-barred
gate, &c.; the parson of the parish,
the Rev. Mr. Bragge, in his evidence
"on the faith of a clergyman,"
obedient no doubt to the feelings of
the squire's justice, declared her to be
a witch; "the judge told him," on

the faith of a judge, he thought him "no conjurer;" but all the judges were not so clear-minded or well informed. In 1716, two persons, Mrs. Mary Hickes and her daughter, the latter only nine years of age, were tried at the assizes at Huntingdon, and executed there on Saturday, July 28, of that year. The case is thus characterised by Gough: "A substantial farmer apprehends his wife and favourite child; the latter for some silly illusions practised on his weakness, the former for the antiquated folly of killing her neighbours in effigy; and Judge Powell suffers them to be hanged on their own confession, four years after his wiser brother had ventured his own life to save that of an old woman at Hertford." Huntingdon and Northampton were the last places that stuck to the text of witchcraft. Sir Henry Cromwell, as lord of the manor of Warboys, after the conviction of sundry witches at Warboys in 1593, left their property, which was forfeited to him, to the corporation of Huntingdon, on condition that they should give 40s. every year to a doctor or bachelor in divinity of queen's college, Cambridge, to preach a sermon at All Saints' church, in Huntingdon, on the annunciation of the blessed Virgin, against the sin of witchcraft, and to teach the people how they should discover and frustrate the machinations of witches and dealers with evil spirits. *This sermon continues to be preached.* After the fashion was led by James I., as might have been expected, witchcraft so increased in the course of fifty years following the passing of this act, that, besides a great number of single indictments and executions, fifteen were brought to trial at Lancaster, in 1612, and twelve condemned; in 1622, six were tried at York; 1634, seventeen condemned at Lancaster; 1644, sixteen were executed at Yarmouth; 1645, fifteen were condemned at Chelmsford, and hanged; in the

same and following year about forty at Bury, in Suffolk; twenty more in the country; and many in Huntingdon; and (according to the estimation of Addy) some thousands were burnt in Scotland, where the last murder of this sort took place in 1722, though the belief in witchcraft is scarcely yet extinct. In England it is the same, for in 1834 the mayor of Yarmouth received a letter complaining of a man bewitched by a woman living near St. George's chapel, Lowestoft; that he can get no rest, night or day, sitting, standing, or walking, and that even at church he can get no comfort. He therefore humbly implores the mayor to have his tormentor examined. The efforts continually made to revive these infamous persecutions by the stolid part of the population, caused the repeal of the law against witchcraft, 10 George II., March, 1736; in America, the colonists inherited the parent feeling for murdering old women; in Massachusetts and Pennsylvania, the victims in 1648 and 1683 were fearfully numerous; abroad, the original edict of persecution was enforced by the successive bulls of the infamous Alexander VI.; 1494, of Leo X. in 1521, and of Adrian VI. in 1522. The only effect of these commissions was to render the evil daily more formidable, till historians say Europe was little better than a large outwork of Pandemonium. One-half of the population was either bewitching or bewitched. Delrio tells that 500 witches were executed in Geneva in three months, about the year 1515. A thousand, says Bartholomæus de Spina, were executed in one year in the diocese of Como, and they went on burning at the rate of a hundred per annum for some time after. In Lorraine, from 1580 to 1595, Remigginus boasts of having burnt 900. In France, the multitude of executions about 1520, was incredible; Danæus, in the first part of his dialogue concerning witches, calls it, "infinitem

pene veneficorum numerum " The well-known sorcerer, *Trois Echelles*, told Charles IX. while he was at Poictou, the names of 1200 of his associates. This is according to Mezeray's more reasonable version of the story; for the author of the *Journal du Regne de Henry III.* makes the number 3000. Grandier the parish priest of Loudun was burned, on the charge of having bewitched a whole convent of nuns, 1634; Maria Renata was burned for a witch at Wurtzburgh, 1749; nine old women were burned, Jan. 17, 1775, there, for rendering the land unfruitful.

WITCHES Meetings, in 1678 several persons were tried for witchcraft, who were said to have held meetings and dances in the night, at which the devil attended, accompanied by a clergyman called Gideon Penman, whom the devil called his chaplain, and whose office it was to follow the dancers, and beat up those that were slow. The first thing that the devil required of them was, to renounce their baptism, and by putting one hand on the head, and the other on the sole of the foot, to deliver up all between the two to his service. Some pregnant women, however, exempted the children, at which they said the devil was very much displeased. When they had done any mischief which the devil enjoined them, his way was to beat them most cruelly for their pains. To some of the ladies, however, he appeared in the shape of a proper gentleman.

WOOD-cutting, invented 1460, and wood-engraving brought to perfection, 1799 to 1840.

WOOD's patent for coining halfpence and farthings to be sent to Ireland, 1723.

WOODS, and act for the preservation of, 1544; first taxed by parliament, 31 Henry VI., 1452.

WOODSTOCK Park, near Blenheim, laid out, the first in England, 1123. Here stood a royal palace, the fa-

vourite retreat of several kings of England, till the reign of Charles I., when it was almost wholly in ruins. King Ethelred held a parliament at Woodstock palace; and there Alfred the Great translated *Boetius de Consolatione Philosophiæ*. Henry I. beautified the palace; and here resided Rosamond, mistress of Henry II., 1191. Edmund, second son of Edward I., was born at this palace; also Edward, eldest son of Edward III., 1331; the princess Elizabeth was confined by her sister Mary here, 1554. A splendid mansion, built at the expense of the nation for the duke of Marlborough, was erected here to commemorate the victory he obtained at Blenheim in 1704. At that time the remnants of the ancient edifice were removed, and two elms were planted on its site.

Wool. One pound of wool has been spun to the length that follows; a lea of woollen yarn measures in length 80 yards; a hank of ditto, by the custom of Norwich, consists of seven leas; twenty-four hanks in the pound is esteemed good spinning in the schools, 13,440 yards; seventy hanks in the pound is esteemed superfine spinning at Norwich, 39,200 yards, or 21 miles; one hundred and fifty hanks in the pound was spun in 1754 by Mary Powyle, of East Dere-ton, in Norfolk; and this was thought so extraordinary, that an account of it is registered at the Royal Society, 85,000 yards, or 48 miles; three hundred hanks in the pound has already been spun by Miss Ives; and though this young lady has carried the art of spinning combed wool to so great a degree of perfection, she does not despair of improving it still farther, to 168,000 yards, or 95 miles.

Wool. Manufacture of; wool was manufactured in England, and is mentioned in A.D. 1185, but not in any quantity until 1331, when the weaving of it was introduced by John Kempe and other artisans from Flanders. This was the real

origin of the manufacture, 6 Edward III., 1331; the exportation prohibited, 1337; staples of wool established in Ireland, at Dublin, Waterford, Cork, and Drogheda, 18 Edward III., 1343; sheep first permitted to be sent to Spain, 1467; first legislative prohibition of the export of wool from Ireland, 1521; the exportation of English wool, and the importation of Irish wool into England, prohibited 1696; bill to prevent the running of wool from Ireland to France, 1738; the duty on wool imported from Ireland taken off, 1739; the export forbidden by act passed 1718; Wool-combers' act, 35 George III., 1794; the non-exportation law repealed, 5 George IV., 1824; woollen cloth made in England before 1200; greatly increased, *temp.* Edward III., 1331; blankets made in England about A.D. 1340; no cloth but of Wales or Ireland to be imported into England, 1463; the art of dyeing brought to England, 1608; medleys, or mixed broad cloth, first made 1614; manufacture of fine cloth begun at Sedan, in France, under the patronage of Cardinal Mazarine, 1646; British and Irish woollens prohibited in France, 1677; all persons obliged to be buried in woollen, or the persons directing the burial otherwise to forfeit £5, 29 Charles II., 1678; the manufacture of cloth greatly improved in England by Flemish settlers, 1688; injudiciously restrained in Ireland, 11 William III., 1698; the exportation from Ireland wholly prohibited, except to certain ports of England, 1701; English manufacture encouraged by 10 Anne, 1712, and 2 Geo. I., 1715; greater in Yorkshire in 1785, than in all England at the revolution. From 1820 to 1824, the prohibition of the export of woollen goods prevailed, and the exports were 1,064,441 pieces; the prohibition removed, and from 1824 to 1830 the average was 1,505,993 pieces; from 1840 to 1844 it reached 2,128,212; in 1850 it was 3,665,077; value

£6,958,122. In 1849 the weight of British sheep and lambs' wool exported, was 11,200,472 lbs., of which France and Belgium took 10,000,000 lbs.: the woollen yarn exported was 11,773,020 lbs., of which nearly 10,000,000 were taken by Germany, Holland, and Belgium. The alpaca and llama wool imported in 1849, was 1,655,300 lbs., of which 126,082 were exported; the mohair, or goat's hair wool imported in 1849, was 2,536,039 lbs., and the quantity exported, 130,195 lbs. The quantity of wool imported in 1749, was 76,768,647 lbs.; the wool of home growth, 145,724,880 lbs.; together, 222,493,527 lbs.—an increase of 115 per cent. since 1800, when the short-woolled sheep were calculated at 14,854,290, and the long-woolled, 4,153,308; the total number of sheep now in England, is estimated at 25,343,476.

WOOLWICH, the oldest royal dock-yard, dating June 1512.

WOOLWICH Church, rebuilt 1732; academy at, founded 1741.

WOOLWICH Arsenal formed, 1740; stores in, to the value of £2,000,000, May 20, 1802; white hemp storehouse burned down, July 8, 1813: four men killed by a gunpowder explosion at, June 18, 1814; it is the principal station of the ordnance, belonging both to the navy and army.

WORCESTER, City of, built 255; city and castle burned, 1113; a stalk of chimneys fell on the count-house and killed several persons, March 15, 1757; greatly injured by an explosion of gunpowder, Aug. 11, 1762; damaged by a fire, Nov. 1791; cathedral of, built between 1084 and 1218 in the Gothic style, 394 feet long, 74 wide, and 200 high; the see founded by Ethelred, king of the Mercians 679, being taken out of the see of Lichfield; monks settled there in place of the married priests 964; cathedral begun to be rebuilt 1030, under Wulfston the bishop.

WORCESTER, Battle of, between Charles II. and the army of the parliament under Cromwell; the larger part of the king's army was composed of Scotch. Cromwell crossed the bridge at Upton, and getting between Wales and the royal army, to which he feared they would retreat, he signally defeated them; the streets were strewn with their dead, Sept. 3, 1651; he made 8000 prisoners, who were sent for labourers to the American plantations, and the country-people falling upon the stragglers who escaped, there was not one Scotchman of the whole army ever again reached his own country.

WORCESTER College, Oxford, founded 1713; incorporated 1744.

WORDE, Wynkin de, the introducer of printing into England; died 1534.

WORKERS in Cloth, 70 families from the Netherlands settled in England, on the invitation of Edw. III., and improved the woollen manufacture.

WORMS, Diet of, before which Luther was summoned, April 4, 1521, which proscribed him. but he entered the city on horseback, accompanied by 2000 persons, and appearing before the diet of princes and priests of all grades, he acknowledged boldly his writings and opinions; he then left the city in triumph, but was prevailed upon to live in seclusion nearly a year afterwards, which consummated his triumph on his re-appearance.

WORKSOP Abbey, Nottinghamshire, built 1103.

WORMSEED, the *Artemisia santonica* which comes from Barbary, the best kind from the Levant; it is used for worms, and has been known since 1390.

WORMWOOD, or *Artemisia absinthium*, common in England, and once used for impregnating beer with bitter before the hop-plant came into use; it is known to have been used for this purpose in 1402; the root has been used in epilepsy.

WORSHIP, in a religious sense, of very early date; uncertain whether that of images was not the abuse of a pure theistical worship; Catholic image worship first introduced into England 763; the Saxon worship preceded Christianity in England; image worship forbidden in Hungary 1785.

WORSHIP, number of churches and chapels of the establishment, 1841, were stated to be 11,825. There are 6308 parishes in England with only an average of 120 souls; thus the population of the parishes is very unequal, but few would find it to the extent which the following

summary of the parishes and townships of England demonstrates, extracted from the report of the commissioners on the poor-laws.

XAVIER, St. Francis, a native of Xavier, at the foot of the Pyrenees; he studied at Beauvais, and was the founder of the notorious society of the Jesuits, which caused so much trouble to the church itself, of which he was a learned member; he died in China, 1552, and was buried at Goa, and canonized, 1622.

XERES, Battle of, and defeat of Roderick, king of the Goths, with the conquest of Spain by the Moors and Arabs, 712.

XERES, a city of Spain, the vicinity of which is noted for its excellent wines, corrupted by the English to sherries. There have been exported from Spain in ten months, 27,149 butts, 25,063 of which came to England, and 314 to English possessions and dependencies. 379 butts were sent to the countries formerly constituting old Spanish America; 324 to the United States;

28 to France; and 1038 to all other parts. Estimating the average value at 100 dollars per butt on board, the total value of the wine exported during the ten months, is 54,298,320 reals (£542,983); of which 50,127,716 reals (£501,277) worth was sent to England, and 50,066 reals (£566) worth to France.

XIMENES, a celebrated statesman of Spain, of Terrelaguna, Old Castile; in 1437, he entered holy orders, assumed the habit of St. Francis, and persevered at court, where he got into all the austerity of his order; in 1495, he was nominated to the bishopric of Toledo, but it made no change in his conduct; in 1507, he received a cardinal's hat; he died 1517: he was the greatest prime minister and the best man that ever governed in the court of Spain.

XIMERA, Battle of, between the Spaniards under Ballasteros, and the French commanded by General Regnier; the Spaniards claimed the victory, but the loss on both sides was very considerable, Sept. 10, 1811.

Y

YACHTS, these elegant vessels, a modern improvement upon the amusements of the past time, sprang up after the peace, and increased annually down to 1850. The expenditure of the Yacht Clubs counts

by hundreds of thousands of pounds in building, fitting, wages, and victualling. They employ upwards of 4000 of the smartest seamen in the world.

The seamen are exclusive of masters, cooks, and stewards, which would give at least 800 in addition to the foregoing numbers. The wages alone for the masters and seamen exceed £120,000 per annum; and the intrinsic value of the yachts, with their armament complete, is more than three-quarters of a million of money. All yachts (besides their broad-side guns) are provided with small arms of every description, and the crews in most cases instructed in the use of them. The amount of outlay with regard to provisions, clothing, and other expenses, can scarcely be guessed; the greatest luxuries are found on board, regardless of cost. There are upwards of fifty yachts of large tonnage in frame; in the spring of 1846, 600 sail of yachts were calculated to be in commission.

YARD, the measure is stated by some to have been the length of the arm of Henry I.; there has been no alteration in this measure since the time of Henry III. It was ordered by parliament that the old standard of 1760, in the custody of the clerk of the House of Commons, should continue to be the standard of extension, of lineal, superficial, and solid measures, 5 George IV., June 17, 1824.

YARM overflowed by the river Tees, causing great damage, Oct. 1761.

YARMOUTH, town of, a royal demesne in the reign of William I.; it received a charter from John, and one from Henry III.; in 1348, the plague carried off 7000 persons,

and it appeared again in 1579, and 1664; the theatre, built 1778; Nelson's pillar, 1817; the suspension-bridge over the Bure, costing £4000, gave way under a number of persons who had assembled upon it, and seventy-nine lives were lost, May 2, 1845.

YARROW Monastery, Durham, built 674.

YEAR, a term of time which varied with different countries and nations; Julius Cæsar corrected the errors of the Roman year, established by Romulus, 788 years before Christ: the common solar year is 365 days, 6 hours, being the time which the earth takes to pass from one tropic until it returns to the same again. The sidereal year is the time the earth takes to pass from any fixed star until it returns to the same again; 365 days, 6 hours, 9 minutes, 9.6 seconds, consisting of sidereal days, each of which is uniformly 23 hours, 56 minutes, 4.092 seconds. The true length of the solar or equinoctial year is 365 days, 5 hours, 48 minutes, 51.6 seconds, or decimally, 365.242264 days of mean solar time: the length of the sidereal year is 365 days, 6 hours, 9 minutes, 11.5 seconds, or 365.256383 days: the anomalistic year is 365 days, 6 hours, 13 minutes, 58.8 seconds, or 365.259708 days: the above lengths of the equinoctial and sidereal years are only mean lengths, the anomalistic is the true one, as it does not vary, which the others must do. The astronomical consists of 12 synodical months, or 354 days 8 hours, 48 minutes, 38 seconds, being nearly

11 days shorter than the lunar year. The lunar civil common year is 12 lunar months, or 354 days. The lunar civil intercalary year contains 13 lunar months, or 384 days; the common civil year, 365 days; the leap year, 366 days.

YEAR, the Jewish. This was in the earlier time of the Jewish history of very uncertain length, sometimes of three months only: their sacred year began in March; the Athenian in June; the Macedonian on the 24th of September; the Christians of Egypt on the 30th or 29th of August; the Persians and Armenians on the 11th of August; modern nations generally on the 1st of January. In the time of William I., the English began it on the 25th December, while the legal year began on the 25th of March; while the English year began on that day, the Scotch began on the 1st of January. The lunar year was in use among the Chaldeans, Persians, and ancient Jews; the latter had a sabbatical year, it being the seventh, when the people were to suffer the ground to lie fallow; every seventh sabbatical year was their year of Jubilee.

YEAR, the Platonic year believed among the Chaldeans, being the time in which all the planets will return to the same point from which they set out, and have the same aspects and configurations; the duration according to some would be 15,000 common years, other thought longer; this alluded to the space of time in which the equinoxes will perform a complete revolution, or the precession of the equinoxes be perfected: Tycho Brahe computed the time at 25,816 solar years; Cassini at 24,000; this retrocession some call 50 seconds of a degree, but more accurate observations state the secular retrocession to amount to 1 degree, 23 minutes, 30 seconds, or 50 seconds 1 degree every year. The Egyptians stated that the sun had once risen in the west, and would do so again in 20,000 years!

YEAR of the Reign, first used by William I. in all public documents, 1066; the phrase of "our Lord," by Charles III., emperor of Germany, 879.

YEAR, Seasons of in the north of Asia, and in Lapland, snow melts, June 28; gone, July 1; the fields green, July 9; plants full up, July 17; plants in flower, July 25; fruits ripe, Aug. 2; seeds shed, Aug. 10; snow, Aug. 18; where it remains until June 23 in the following year, the summer being eight or nine weeks in all the year, and the seasons summer and winter only.

YELLOW dye, for cotton, invented by Dr. R. Williams, 1773.

YELLOW Fever raged in the West Indies with uncommon mortality, 1732, 1739, 1745, 1794, 1852; in Philadelphia, Oct. 1792, 1793, 1797, 1798, and in New York; in Spain, 1803; at Gibraltar, 1804 and 1814; in the Mauritius, 1815; at Cadiz, 1819; at Santa Cruz, Tenerife, 1200 died of it, Feb. 1811.

YEAVING, Battle of, between the Scotch under Sir Robert Umfraville and the Earl of Westmoreland, when 430 English routed 4000 Scotch, and took 160 prisoners, 1415.

YEOMAN of the Guards first instituted, Oct. 30, 1485; the Earl of Oxford, first captain.

YEOMIL, Somersetshire, fire at, which destroyed 17 houses, Sep. 21, 1815.

YEZDEGERD, the Persian era, began June 16, 632; reformed in 1075; the difference being 112 days apart from the truth, as the year consisted of 365 days only.

YORK-BUILDINGS Water-Works Company, incorporated 1661.

YORK, Indianman, lost in going into Limerick, Ireland, Nov. 14, 1758.

YORK, Duke of, b. 1763, commanded unsuccessfully on the continent, 1794 and 1799; charges preferred against him in the House of Commons by Mr. Wardle, member for Onkhampton, Jan. 28, 1809; resigned the commandership-in-chief of

the forces, March 18, 1809; had £40,000 annuity settled on him, 1792; restored to be commander-in-chief by his brother, 1811; died 1827.

YORK, Admiral Sir Joseph Sydney, drowned by the upsetting of his boat, near Portsmouth, May 5, 1831.

YORK, Archbishopric of, Paulinus made archbishop of, 622; the metropolitan see of the Scotch bishops until 1464; the archbishop allowed to style himself the primate of England, while the archbishop of Canterbury is primate of all England.

YORK TOWN, Upper Canada, taken by the Americans, April 27, 1813, but soon afterwards again occupied by the British.

YORK, a very ancient northern city, said to be the Eboracum of the Romans; the Emperor Severus made it his headquarters, 207; Constantius also resided here for a time, and his son Constantine the Great was born to him here; both the Emperors Severus and Constantius died here. City burned by the Danes, 1069; received a charter from Richard II.; Guildhall built, 1466; the famous petition from, to reduce the public expenditure and redress grievances, Dec. 1779. St. Mary's Abbey, now in ruins, built by Rufus, 1088; rebuilt, 1270; Ouse bridge built, 1566; castle built by William the Conqueror; rebuilt, 1701; mansion-house, built 1728; cathedral set fire to by Martin, a lunatic, Feb. 2, 1829; re-opened, being re-edified after the great injuries it sustained, May 6, 1832. This noble cathedral was built in the gothic style, 1327, it is 524 feet long and 213 broad: there was a church on the same site, built by Edwin, king of Northumbria, 741; damaged and rebuilt, 780; destroyed by fire and built again, 1069; rebuilt and again burned, 1137,

with St. Mary's Abbey and 39 parish churches: an accidental fire broke out, this reduced the belfry to ruins, and destroyed the roof of the nave, May 20, 1840.

YORK and Lancaster, civil wars of the houses of, the first contest taking place 1455, and the last 1471; the White Roses or Yorkists were victorious over the Red, or house of Lancaster; 30 sanguinary battles were fought in this contest; the land left untilled, produced famines, and nearly all the head nobility of England were exterminated.

YORK TOWN, surrender of Lord Cornwallis at, to the American revolted colonists, of which they took possession, Aug. 1781; after a siege in which his position became no longer tenable, he surrendered with 7000 men to General Washington, Oct. 19, 1781.

YVRÉS, in Flanders, founded 960; taken by the French, 1678.

YVRES, battle of, between Henry IV. of France and the Catholic League, when the latter were completely routed; Henry then advanced to Paris, which he reduced to the point of surrendering through famine, when the Duke of Parma marched to the aid of the League, by his master's orders, and Henry was obliged to abandon the siege, March 14, 1590.

YOUGHALL, in Ireland, had its barracks blown up by accident, in Sept. 1793, when the face of Mr Armstrong, the quartermaster, was so burnt, that the whole of his skin was scorched; but it was singular that he was much marked with the smallpox before the accident happened, and, on getting a new skin, it became perfectly smooth, without any remains of the smallpox marks.

Z

ZANTE, one of the Ionian islands which was once subjected to the republic of Venice, before the French revolution; ceded to France by the treaty of Campo Formio, Oct. 17, 1797; taken by a Turco-Russian fleet, and made the republic of the Seven Islands, 1799: surrendered by the French to the Russians, with Ragusa, Aug. 14, 1807; submitted to the English, Oct. 3, 1809; put by the congress of Vienna under the protection of England, Nov. 5, 1815; the constitution of, ratified by the Prince Regent of England, Feb. 22, 1817.

ZANZALEANS, a Syrian sect, that arose under one Zanzalea, 535; they taught that a baptism by water was of no effect, that it was necessary to be baptised with fire, by the application of a red-hot iron; the sect became very numerous.

ZEALAND, NEW, discovered by Tasman in 1642; on the eastern coast, he entered a strait where, being attacked by the natives, he did not go ashore. From the time of Tasman, the whole country, except the coast seen by him, remained unknown, and was supposed to make part of a southern continent, till 1770, when it was circumnavigated by Captain Cook, who found it to consist of two large islands, separated by a strait. Captain Cook, in 1773, planted several spots of ground on this island with European garden-seeds; and in 1777 he found fine potatoes, greatly improved by change of soil. New Zealand has become an important colony; a charter, founded upon an act passed in 1846, created powers municipal, legislative, and administrative there, Dec. 29, 1847; and a legislative council was opened by the governor, Sir George Grey, Dec. 20, 1848.

ZECCA at Venice, built 1570.

ZEDWITZ in Germany, the Catholic church of, the post-office, and 4000 private dwellings, destroyed by fire at, Dec. 12, 1814.

ZELICHOW, Battle of, between the Poles and Russians, in the last contest for Polish freedom. The combat was desperate and sanguinary. The Russians, commanded by the celebrated Diebitch, were defeated, with the loss of 12,000 killed, wounded, and prisoners—their commander narrowly escaping capture, April 6, 1831.

ZELL, the prison of the unfortunate and injured Queen Matilda of Denmark, who was by a right royal marriage given to a poor imbecile monarch of Denmark. She was the sister of George III. of England, and was handed over at the age of seventeen to be the victim of the queen-dowager, who found her intrigues opposed by Queen Matilda and the Counts Brandt and Struensee, whom she contrived to sacrifice to her objects. The queen embarked May 10, 1772, for Zell, where she died at the early age of twenty-four, being removed there at the instance of her brother, the king of England. Not the slightest taint rests upon her character. She was another victim to royal marriages.

ZERTA, Battle of, between Prince Eugene against the Turks, fought 1697; it forced on the peace of Carlovitz, Jan. 1699.
